UNIT VI — PICTORIAL DRAWING

General Information

Many times a workman will need to show his ideas and plans for such things as a house, a wood project or a screw driver handle to another person. This person may not be familiar with conventional drawing techniques. To do this you may use a form of drawing known as pictorial drawing. Pictorial drawings resemble a true picture closer than any other type of drawing. Two or three sides appear on the same view of the object as pictured in Illustration Sheet 20, on page 75. There are four principal types of pictorial drawings, isometric, oblique, cabinet and perspective. In this unit you will learn to make isometric and oblique drawings.

The most popular and most used type of pictorial drawing is the isometric. An isometric drawing clearly shows three surfaces of an object. The drawing is laid out on an isometric axis of three lines, one vertical, one 30 degrees to the left, and another 30 degrees to the right as shown in Figure 1, Illustration Sheet 21, page 77. The object is drawn accurately to the scale you wish to use.

The oblique drawing resembles an isometric except that one face of the object is shown as a true front view. See Figure 2, Illustration 21. The receding sides go back at any convenient angle, usually 45 degrees. When making an oblique drawing select the face that is most irregular or complicated in shape to serve as the front of the

- *Visual Communication Instructor,* 25 West 45th Street, New York, New York 10036 (free to drafting teachers).

D

EQUIPMENT

The following list is presented as a guide in the selection of furniture and equipment needed to teach drafting. The approximate number of each item needed for a small, medium, or large number of students in a drafting room is indicated as well as items needed to equip a planning and drafting area of a general shop.

Basic Equipment for the Planning and Drafting Area of a General Shop

	No. Needed
Furniture	
Cabinet for storing drafting equipment	1
Chairs for planning and conference table	3
Drafting chairs or stools	3
Drafting tables 29" or 36"	3
Planning and conference table	1
Equipment	
Chalkboard set: T-square, straight edge, triangle, protractor, and compass	1
Drafting boards, 20 by 24 inches, basswood	6
Drafting instruments set, min. of dividers, compass	4
Drafting standards manuals: either USASI or SAE	1
Erasing shield	6
French curves 8 inches, min. of 2 curves forms	2
Machinists and engineers data handbook	1
Overhead projector	1
Paper knife-board, 24 by 24 inches	1

16732

Pencil sharpener (regular)	1
Pencil sharpener (draftsman)	1
Portable drafting kit	2
Printing frame	1
Printing machine	1
Projection box	1
Protractor, semi-circular 5 inches	1
Scales: 12" hardwood architects	6
Scales: 12" combination, architect, civil and mechanical engineers	6
Textbook	10
Triangles 30-60 degrees 10 inches	6
T-squares 24 inches — hardwood, plastic edge, fixed head	4

Basic Equipment for the Drafting Room

	Class Size		
	Small (10)	Medium (16)	Large (24)
Furniture			
Bookcase	1	1	1
Cabinet for storing drafting equipment	1	1	1
Chairs for planning and conference table	3	6	8
Desk and chair for instructor	1	1	1
Drafting chairs or stools	10	16	24
Drafting tables 29" or 36"	10	16	24
Filing cabinet	1	1	1
Planning and conference table	1	1	2
Supply cabinet	1	1	1
Equipment			
Chalkboard set: T-square, straight edge, triangle, protractor, and compass	1 set	1 set	1 set
Drafting board 20"x 24", basswood	10	16	24
Drafting instruments set, minimum of dividers, and compass	10	16	24
Drafting standards manuals: either USASI or SAE	1	1	1
Drafting tables, 32"x 42" with stools or chairs	10	16	24
Erasing shield	10	16	24
French curves 8", minimum of 2 curve forms	10	16	24
Machinists and engineers data handbook	1	1	1
Overhead projector	1	1	1
Paper knife — board, 24"x 24"	1	1	1
Pencil sharpener (regular)	1	1	1
Pencil sharpener (draftsman)	1	1	1
Printing frame	1	1	1
Printing machine	1	1	1
Projection box	1	1	1
Protractor, semi-circular 5"	10	16	24
Scales: 12" hardwood architects	10	16	24
Scales: 12" combination, architect, civil and mechanical engineers	4	8	12
Technical fountain pen	4	8	12
Textbook	10	16	24
Triangles 30-60 degrees 10"	10	16	24
Triangles 45-45-90 10" celluloid	10	16	24
T-squares 24" — hardwood, plastic edge, fixed head	10	16	24
Drafting machines — 18" arm	10	16	24

SUPPLIERS OF EQUIPMENT

- Broadhead Garrett Company, 4560 East 71st Street, Cleveland, Ohio 44105.
- Eugene Dietzgen, 2425 North Sheffield Avenue, Chicago, Illinois 60614.
- Frederick Post Company, Box 803, Chicago, Illinois 60690.
- Keuffel and Esser Company, Audiovisual Division, Hoboken, New Jersey 07030.
- Midwest Shop Supplies, Inc., 301 Jackson Street, Sioux City, Iowa 51101.
- Olson Manufacturing Company, Box 109, Ames, Iowa 50010.

16733

ELECTRICITY–ELECTRONICS

16734 83

The impact of electricity-electronics on our society has been far reaching. It is a rapidly expanding and changing field which requires continued updating. Students need an adequate understanding of this field if they are to adjust to new developments and products that will continually change their way of life.

At the elementary level, such things as studying how electricity is made and the importance of electricity to our way of life could enrich the classroom activity.

Normally, electricity-electronics courses should be started in the eighth grade and required of all boys. Girls could participate in this area. There is little about the work which would put them at a disadvantage. Time permitting, instruction in this area should be continued in the ninth grade.

Additional instruction in this area should be offered in the senior high school where at least two years of elective sequential course work should be available. Equipment and facilities adequate for such specialization must be provided. Coursework at this level, despite the degree of proficiency attained by some students, should not be considered as training for earning a wage.

Many opportunities are provided by this area for utilizing mathematical and scientific principles and reducing abstractions in relation to them. Safety education is of primary importance in electricity-electronics, and every effort should be made to help students understand safety as it applies to this area and develop safe habits of working in it. Activity in this area usually involves each student working on a suitable project at his own pace. However, opportunities abound for manipulative activities that are experimental in nature, involve exercises, or utilize the problem solving approach.

Electricity-Electronics for Junior High Schools (7-9)

The junior high program in electricity-electronics should be exploratory in nature. It should be designed to provide the student with a wide range of experiences in the basic fundamentals. A minimum of 14 weeks is suggested during the junior high years.

Modern electronic equipment.

Objectives. Every student should have the opportunity:

- To develop the ability to use and care for common tools and equipment used in electricity-electronics.
- To realize personal interests and abilities in electricity-electronics and gain some understanding of occupational opportunities and leisure time activities in this field.
- To develop habits of safe practices and conduct in the use of electricity.
- To develop an understanding of electricity-electronics theory and circuitry.
- To develop cooperative attitudes in working with others.
- To develop desirable habits that allow him to pursue a problem to its final solution.

Content. The following outline includes content which would be appropriate to teach in junior high school. It is presented in sequential order. No attempt has been made to identify specific units or courses. It may be organized into one course or several depending on the local scheduling arrangements and the equipment available. So many good sources for student activities exist in textbooks and professional journals that none are included in the material which follows.

I. Electrical safety

A. Electrical shock

E

16735

B. Prevention

C. First aid

D. Home and shop safety

E. Use of fire extinguisher

II. Occupational information

A. Further experiences

B. Job opportunities

III. Consumer knowledge

A. Purchase and use of electrical products

B. Maintenance

IV. Soldering and wiring

A. Preparation

B. Skills needed

C. Application

V. Introduction

A. Electron theory of matter

B. Static electricity

C. Current electricity

VI. Sources of electricity

A. Chemical

B. Light

C. Heat (thermal)

D. Mechanical

E. Piezoelectric effect

F. Static

VII. Magnetism

A. Poles' fields

B. Laws

C. Natural magnets

D. Earth's field

E. Electromagnets

F. Solenoids

G. Relays

H. Generators, A.C. and D.C.

I. Motors, A.C. and D.C.

J. Coils

K. Transformers

VIII. Low and high voltage circuits, A.C. and D.C.

A. Schematics and symbols

B. Current flow

C. Meters and measurements

D. Series

E. Parallel

F. Combination

G. Ohm's law

H. Household wiring

IX. Resistance, capacitance, inductance

A. Definition and identification

B. Use

C. Components

D. Circuits

E. Reactance

X. Vacuum tubes

A. Definition

B. Use

C. Construction

16736

D. Identification

E. Diode

F. Triode

G. Basic tube circuits

H. Oscillation

I. Rectification

J. Amplification

K. Detection

XI. Semi-conductors

A. Early types

B. Diodes
1. Identification and use
2. Compared to diode (tube)
3. Materials used

C. Transistors
1. Type PNP, NPN
2. Identification and use
3. Compared to triode (tube)
4. Materials used

XII. Transmitters and receivers

A. Definition

B. Operation

C. Block diagram

D. One-transistor radio

E. Code oscillator

F. One-transistor amplifier

G. Wave propagation

XIII. Related topics

K. Integrated circuits

L. Ultrasonics

M. Chips

N. Tape recording

XIV. Projects

A. Related

B. Up-to-date

C. Value

D. Student interest and experience

E

Electricity-Electronics for Senior High School (10-12)

Should electricity-electronics not be taught at the junior high school level, it is most important than an introductory course be provided in this area at the senior high school. A one-semester course patterned after the junior high school electricity-electronics outline in this guide would serve well here. This could be followed with:

- *Fundamentals of Electricity - Electronics.* Course content is derived from the basics common to both the courses listed below. A minimum length of one semester is recommended.

- *Electricity.* This course is designed to give the student some competence in the electrical field. Emphasis is on electrical construction, installation, operation, and servicing. A minimum program of one year is recommended.

16737

- *Electronics.* This course is designed to give the student some competence in the field of electronics. Emphasis is on fundamental concepts and principles, and practical application of knowledge gained. A minimum program of one year is recommended.

Objectives. Every student should have the opportunity:

- To develop the ability to use and care for common tools and advanced equipment used in electricity-electronics.
- To develop desirable habits and procedures for use in problem solving situations in electricity-electronics.
- To gain further understanding of industrial standards for electricity-electronics.
- To develop a further understanding of the purchase, use, and maintenance of electrical-electronic equipment.
- To continue building good safety habits in the use of electrical and electronic products.
- To use science, mathematics, and other aspects of general education that may be helpful in developing an in-depth understanding of electricity-electronics theory and circuitry.

Content. The areas of electricity and electronics are closely related, but it is important to understand how they differ.

Electricity is generally considered to be a movement of electrons through a solid.

Electronics is generally considered to be the field that deals with the emission, flow, and effect of electrons in a vacuum, gases, and solid state materials.

It is recognized that course titles, sequence of instruction, and extent of student involvement may be modified by local conditions. The suggested content is presented as a guide only. How this or other information is presented is the responsibility of the individual instructor. Since appropriate student activities for this area are so readily available in textbooks and professional journals none are included here.

Electricity (2 to 4 semesters)

I. History

A. Chronological developments
1. Major events
2. Biographies

B. Predictions

II. Occupational information

E. Nuclear electronics

F. Radar, sonar

G. Electrical discharge machine

H. Numerical machine control

XXXIII. Projects

A. Student experience

B. Use and value

C. Costs

SELECTED INSTRUCTIONAL AIDS OR SOURCES

Only a limited amount of specific material is included here. Many entries are primarily for purposes of illustration. Sources that pertain to electricity-electronics are included if specific material is not listed below. Additional information of a general nature may be found on page 48.

Miscellaneous Materials

- Pamphlet: "Dictionary of Electronic Terms," Allied Radio Corporation, 100 North Western Avenue, Chicago, Illinois 60612.

- Pamphlet: "Operation and Servicing of Dry Batteries," Burgess Battery Company, Division of Servel, Inc., Freeport, Illinois 61032.

- Pamphlet: "Handbook on Fuses," Bussman Manufacturing Company, Division of McGraw-Edison Company, University and Jefferson Streets, St. Louis, Missouri 63107.

- Pamphlet: "Magnetism and Electricity," Chrysler Corporation, Educational Service, Public Relations Dept., Box 1919, Detroit, Michigan.

- Wall Chart: "Capacitor Application Wall Chart," Cornell-Dubilier Electric Corporation, 333 Hamilton Avenue, South Plainfield, New Jersey 07080.

- Pamphlet: "Permanent Magnet Design," Crucible Steel Company of America, 3338 South Malt Avenue, Los Angeles, California 90022.

- Manual: "Career Guidance Manual," DeVry Technical Institute, 4141 Belmont Avenue, Chicago, Illinois 60641.

- Pamphlet: "How To Make a Demonstration Fuel Cell," Esso Research and Engineering Company, Box 45, Linden, New Jersey 07036.

- Pamphlets: "Adventures in Electronics" and "Edison and Electricity," General Electric Company, Educational Relations, Schenectady, New York.

- Pamphlet: "The Amazing World of Short Wave Listening," Halicrafters, Dept. 21, Chicago, Illinois.

16747

- Pamphlets: "Light for Living Outdoors" and "Residential Wiring Handbook," Indianapolis Power and Light Company, 25 Monument Circle, Box 1595, Indianapolis, Indiana 46204.

- Manual: "Electric Wiring and Modern Homemaking," National Adequate Wiring Bureau, Educational and Promotion Dept., 155 East 44th Street, New York, New York 10017.
- Manual: "Simplified Electric Wiring Handbook," and Calculator: Service Entrance Equipment Selector, Sears Roebuck and Company, 925 South Homan Avenue, Chicago, Illinois 60624.

- Pamphlet: "Portable Power Handbook. . .The Inside Story of Dry Batteries," Union Carbide Consumer Products Company, Division of Union Carbide Corporation, 30-20 Thomson Avenue, Long Island City, New York 11101.

- Booklet: "Planning a Career in Electronics," Electronic Industries Association, 2001 I Street, N.W., Washington, D.C. 20006.

Transparencies

The following is a list of companies that are producing transparencies. They should be contacted directly to obtain a complete list of such materials.

- Charles Beseler Company, 219 South 18th Street, East Orange, New Jersey 07018.

- DCA Educational Products, Inc., 4865 Stenton Avenue, Philadelphia, Pennsylvania 19144.

- Jam Handy Organization, 2821 East Grand Boulevard, Detroit, Michigan 48211.

- 3M Company, Visual Products, Box 3100, St. Paul, Minnesota 55101.

- United Transparencies, Inc., Box 888, Binghamton, New York 13902.

Filmstrips

- FOMC, Filmstrip-of-the-Month Club, Inc., 255 Lexington Avenue, New York, New York 10016.

- The Filmstrip House, 25 Broad Street, New York, New York 10004.

- Jam Handy Organization, 2821 East Grand Boulevard, Detroit, Michigan 48211.

- Life Film Strips, Time and Life Building, Rockefeller Center, New York, New York 10020.

- McGraw-Hill Text Films, 330 West 42nd Street, New York, New York 10036.

Motion Pictures

- General Electric Company, 1 River Road, Schenectady, New York 12306.

- McGraw-Hill Text Films, 330 West 42nd Street, New York, New York 10036.

Books

- *Basic Electricity (and an Introduction to Electronics)*, Engineering Staff, Howard W. Sams & Co., Inc., Bobbs-Merrill Co., Inc., Indianapolis, Indiana, 1960.

- *Basic Electronics,* (Second Edition), Bernard Grob, McGraw-Hill Book Co., New York, New York 10036, 1965.

- *Basic Electronics* Alfred A. Lease, Bruce Publishing Co., Milwaukee, Wisconsin, 1965.

- *Electricity,* Howard H. Gerrish, Goodheart-Willcox Co., Inc., Homewood, Illinois 60430, 1961.

- *Electricity & Electronics,* Howard H. Gerrish, Goodheart-Willcox Co., Inc., Homewood, Illinois 60430, 1964.

- *Electricity Electronics Dictionary* Howard H. Gerrish, Goodheart-Willcox Co., Inc., Homewood, Illinois 60430, 1966.

- *Electronics,* Howard H. Gerrish, Goodheart-Willcox Co., Inc., Homewood, Illinois 60430, 1961.

- *National Electrical Code Standard for Electrical Wiring Apparatus* (NBFU #70), National Board of Fire Underwriters, 222 West Adams Street, Chicago, Illinois 60606.
- *Understanding Electricity & Electronics,* Buban & Schmitt, McGraw-Hill Book Co., New York, New York 10036, 1962.

TOOLS AND EQUIPMENT

The following list is presented as a guide in the selection of tools and equipment needed to teach electricity-electronics. The appropriate number of each item needed for a small, medium, or large number of students in an electricity-electronic unit shop is indicated as well as items needed to equip an electricity-electronics area of a general shop.

Basic Equipment for the Electricity-Electronics Area of a General Shop

	No. Needed
Equipment	
Cat's fur	1
Rubber rod	1
Glass rod	1
Silk cloth	1
Pith balls	6
Metal induction spheres	2
Laboratory permanent magnet set	1
Electro-magnetic materials	1
Tools	
Pliers, long nose, insulated handle	2
Pliers, diagonal oblique cutting, insulated handle	4
Pliers, 8" electrical side cutter, insulated handle	1
Soldering gun, 125 w	2
Soldering iron, electric 40 w	2
Wire gauge	1
Wire stripper	1
Miscellaneous hand tools from other areas can be used	
Instruments	
Volt-ohm-milliammeter, 20 k ohm/volt sensitivity	2
Galvanometer, 50-0-50	1
A.C. Ammeter, ranges 0-5, 0-30	1
D.C. Ammeter, ranges 3/5/30 amps	1
A.C. Voltmeter, ranges 50/100/200 volts	1
D.C. Voltmeter, ranges 1.5/15/150 volts	1
Power supply	
Variable Low voltage D.C. 0 to 50 volts	1
Variable Low voltage A.C. 0 to 50 volts	1
Batteries, $1^1/_2$V, 6V, 9V, 12V	1 ea.

Demonstration boards and mockups

Constructed or purchased as determined by instructor needs.

Basic Tools and Equipment for the Electricity-Electronics Unit Shop

	Class Size Small (8)	Medium (12)	Large (16)
Tools			
Alignment tools	2 sets	4 sets	8 sets
Allen screw key wrenches	1 set	1 set	1 set
Chassis punches, round	1 set	1 set	1 set
Chassis punches, square	1 set	1 set	1 set
Cold chisels	2	3	4
Combination square	2	4	6
Countersink, metal	1	2	2
Dial cable tool	1	1	1
Drill, electric $\frac{3}{8}$" capacity	1	2	2
Drills, high speed twist set ($\frac{1}{16}$"-$\frac{1}{2}$") $\frac{3}{8}$" shank	1	1	1
Drill press, 15"	1	1	1
Dividers, 6"	1	2	3
Files, assorted 8" set	1	2	3
File cards	2	3	4
Files, Swiss pattern set	1	1	1
Framing square	1	1	1
Fuse puller	1	2	2
Hack saw frame and blades	1	2	3
Hammer, 8 oz. ball peen	1	2	3
Hammer, electricians	1	1	1
Hammer, claw	1	1	1
Hydrometer	1	1	1
Hole saw set, $1\frac{1}{2}$"-$2\frac{1}{2}$"	1	1	1
Mallet, rawhide	1	2	4
Micrometer, 1" cap.	1	2	3
Mirror, inspection	1	2	4
Neon pocket test lamps	2	4	6
Pipe wrench, 8"	1	1	1
Pickup tool	1	2	3
Pincers, 10"	1	1	1
Pliers, channel lock	1	1	1
Pliers, long nose, insulated handle	8	12	16
Pliers, 8" electricians side cutter, insulated handles	1	1	2

16749

	Small (8)	Medium (12)	Large (16)
Pliers, combination, insulated handles	2	2	3
Pliers, diagonal oblique cutting, insulated handles	8	12	16
Pop rivit gun	1	1	1
Punches, center	2	3	3
Punches, chassis set ($\frac{1}{2}$"-$1\frac{1}{2}$" round)	1	1	1
Punches, chassis set ($\frac{5}{8}$"-1" square)	1	1	1
Romex stripper	1	2	3
Rules, 1', steel	1	2	3
Screwdriver, flexible	1	2	3
Screwdriver, stubby	1	2	3
Screwdriver, shockproof thin blade 6"	8	12	16
Screwdriver, shockproof thin blade 8"	1	2	2
Screwdriver, Phillips set	1	2	4
Screwdriver, Phillips offset	1	1	1
Slug retriever, 12"	1	1	1
Screwdriver, standard offset	1	1	1
Scriber	2	4	6
Snips, aviation cuts left	2	4	6
Snips, aviation cuts straight	2	4	6
Snips, aviation cuts right	2	4	6
Soldering aid tool	8	12	16
Soldering guns, 125W	2	6	8
Soldering iron, electric 100W	2	3	3
Soldering iron, electric 450W	1	1	1
Soldering iron, pencil 40W	8	12	16
Steel tape, 12'	1	1	1
Tap and die set (electricians)	1	1	1
Template fly cutter	1	1	1
Try square, 6"	3	6	9
Tube pin straightener	1	2	2
Tube puller	1 set	2 sets	3 sets
Vise, 4" machinist	4	6	8
Voltage tester, solenoid type	1	1	1
Wire gauge	1	1	1

	Small (8)	Medium (12)	Large (16)
Wire stripper	8	12	16
Wrenches, hex nutdriver sets	2	4	6
Wrenches, set open end, $\frac{1}{4}$"-$\frac{3}{4}$"	1	2	3
Solderless terminal kit and crimping tool	1	1	1
Cat's fur	1	1	1
Rubber rod	1	1	1
Glass rod	1	1	1
Silk cloth	1 sq.ft.	1 sq.ft.	1 sq.ft.
Pith balls	6	6	6
Metal induction spheres	2	2	2
Box and pan brake, 24"	1	1	1
Bench grinder, $\frac{1}{3}$ H.P., 2 wheels	1	1	1
Engine lathe, 10" swing	1	1	1
Metal shear, 18 gauge	1	1	1
Coil winder	1	1	1
Instruments			
A.F. single generator	5	7	9
Capacitor checker	1	1	1
Dynamic demonstrators			
A.C. ammeter	1	1	1
A.C. voltmeter	1	1	1
D.C. ammeter	1	1	1
D.C. voltmeter	1	1	1
Galvanometer	1	1	1
Ohmmeter	1	1	1
Wattmeter	1	1	1
Oscilloscopes 5"	3	6	9
Vacuum tube volt-ohm-milliammeter	5	10	15
Portable meter			
A.C. ammeter, ranges 0-30 amps.	8	12	16
D.C. ammeter, ranges 3/5/30 amps.	8	12	16
A.C. voltmeter, ranges 50/100/200 volts	8	12	16
D.C. voltmeter, ranges 1.5/15/150 volts	8	12	16
Galvanometers	5	7	9
Volt-ohm-milliameter, 20Kohm/volt sensitivity	5	10	15
R.F. signal generator, A.M. and F.M.	5	7	9

E

	Class Size		
	Small (8)	Medium (12)	Large (16)
Transistor tester	1	1	2
Tube tester	1	1	2
Wheatstone bridge	1	1	1
Capacitor substitution box	1	2	2
Resistor substitution box	1	2	2
Magnets			
Laboratory permanent magnet set	1	1	1
Bar magnets	10	20	30
Ring magnets	2	3	4
Horse shoe magnets	5	10	15
Electro-magnet	1	1	1
Power supply			
Variable-low voltage D.C. 0-50 volts, 10 amps.	1	4	8
Variable-high voltage D.C. 0 to 400 volts, 1 amp.	1	4	8
Variable A.C. voltage 0 to 120 volts, 15 amps.	1	4	8
Battery eliminator 6-12 volt	1	1	2

Miscellaneous equipment

Armature growler
Alignment tools
Bearing puller
Conduit bender
Fish tape
Punches, pin type, set
Reamer, expandable set, $\frac{1}{4}$"-$\frac{3}{4}$"
Tachometer
Television analyzer
CRT tube tester and rejuvinator
Sine, square, and sawtooth wave generator
Dual trace oscilloscope
Battery charger
1. quick charger
2. trickle charger
Electro-plating equipment
Vector oscilloscope
Grinder
Jig saw
Drill press
Isolation transformers
Spot welder
In-circuit transistor checker
In-circuit capacitor checker
Commutator servicing equipment

SUPPLIERS OF TOOLS AND EQUIPMENT

- Aladdin Kits Company, 21011 Dequindre Road, Hazel Park, Michigan 48030. (Breadboard systems speed working testing circuits)
- Ariel David Manufacturing Company, 2975 South Second, West, Salt Lake City, Utah 84115. (Power supply)
- Broadhead-Garrett Company, 4560 East 71st Street, Cleveland, Ohio 44105. (Equipment and supplies, technical trainer equipment)
- Dede Tool and Die Company, 538 North 16th Street, Terre Haute, Indiana 47807. (Coil winding equipment)
- McKnight and McKnight Publishing Company, Dept. 301, Bloomington, Illinois 61701. (3E experimenter)
- Mid-West Shop Suppliers, 301 Jackson Street, Sioux City, Iowa 51101. (Equipment, training materials)
- Parent Metal Products, Inc., 6800 State Road, Philadelphia, Pennsylvania 19135. (Electrical benches)
- RCA Electronic Trainers Dept., Building 204-1, Camden, New Jersey 08101. (Electrical and electronic fundamentals, transistor fundamentals)
- Science Electronics, Inc., 195 Massachusetts Avenue, Cambridge, Massachusetts 02139. (Training equipment)
- Shallcross Manufacturing Company, Preston Street, Selma, North Carolina 27276. (Catalog—resistors, switches, resistance bridges, audio attenuators)
- Warner Electric Company, Inc., 1512 West Jarvis Avenue, Chicago, Illinois 60626. (Electroplating accessories)
- Xcelite Inc., 72 Bank Street, Orchard Park, New York 14127. (Tools)

Man's progress from primitive to present society has been largely dependent upon his ability to develop effective means of audio and visual communication. Graphic arts is concerned with the visual communications and is known as the preservative of the arts.

At the elementary level, such things as learning the alphabet, studying the printed work, making paper, binding a geography booklet, taking pictures with a pinhole camera, and studying the detailed engravings on postage stamps are appropriate graphic arts activities which are either of primary instructional importance or valuable for their enriching effect upon classroom instruction.

When possible, specific graphic arts courses should be started in the seventh grade and required for all boys. This is an appropriate and interesting area for girls, and they should be included if scheduling permits. Students at this level can develop proficiency in the skills of printing and duplicating processes using materials and equipment commonly found in a graphic arts shop.

Additional instruction in this area should be offered in the senior high school where at least two years of elective sequential course work should be available. Equipment and facilities adequate for such specialization must be provided. Course work at the senior high level, despite the high degree of proficiency attained by some students, should not be considered as training for earning a wage.

Graphic arts may make unique contributions to the industrial arts program by providing introductory experiences in many phases of visual communication in a laboratory setting. Here, proficiency in the skills of printing and duplicating processes can be developed using methods and equipment common to a graphic arts shop. The use of good English, applied mathematics, science, and design skills is required. Safety education is important in the teaching of every graphic arts operation, and special emphasis is placed on developing good safety habits. Students should be given the opportunity to develop original designs and a chance to modify existing work to meet their individual needs. Courses in this area are usually taught using the craftsman's approach. This allows each student to work on a suitable project at his own pace. However, such courses lend themselves to production work compatible with the instructional program and serve to acquaint students with modern industrial practice. Activities centered around research and experimentation should thrive on the increasing complexity of modern graphic arts techniques and the rapid advance of new reproduction methods.

Objectives

Every student should have the opportunity:

- To develop an awareness of the economic, historical, and social significance of the graphic arts.
- To develop an interest in and a knowledge of the mechanical principles, skills, and science underlying the graphic arts processes.
- To improve aesthetic appreciation and the integral techniques of planning and designing involved in the printing of a final product.
- To experience introductory activities in all the graphic arts areas.
- To develop an awareness of safety hazards peculiar to graphic arts and the importance of following good safety practices.
- To increase avocational interest in pursuing some phase of the graphic arts for pleasure.
- To develop the ability to recognize good design and workmanship and the ability to select, care for, and use printed materials wisely.
- To develop the habit of orderly, efficient, and complete performance of all tasks.
- To reinforce and extend academic skills in grammar, spelling, punctuation, composition, mathematics, and science by applying them in solution of specific problematic situations.
- To experience vocational guidance in the field of graphic arts.

Content

The following outline includes content which would be appropriate to teach in both junior and senior high school. It is presented in sequential order. The extent of class involvement with each unit is dependent upon the time allocated to graphic arts by the local schedule and the equipment available.

G

16753

Many good sources for appropriate student activities exist in textbooks and professional journals.

Graphic Arts for Junior High Schools (7-9)

I. History of printing

- A. Development of the alphabet
- B. Development of paper
- C. Early printing methods
- D. Invention of movable type
- E. Development of lithography
- F. Development of intaglio printing
- G. Development of screen printing
- H. Advancement of photography
- I. Development of printer's ink
- J. Beginning of copy reproduction

II. Study of basic processes

- A. Relief printing
- B. Planography (offset lithography)
- C. Stencil (silk screen)
- D. Intaglio (gravure)
- E. Electrostatics
- F. Bindery
- G. Photography

III. Design and layout

- A. Design principles
- B. Basic type styles
- C. Proper type selection and harmony
- D. Printing layouts
- E. Copy fitting

IV. Mathematics for printers

- A. Tools and equipment
- B. Printer's systems of measurement
- C. Measuring type
- D. Cutting paper
- E. Figuring quantity and spoilage allowance
- F. Figuring job costs
- G. Light principles
- H. Optics
- I. Exposure computations
- J. Labor and management
- K. Overhaul
- L. Machine time

V. Printing papers and inks

- A. Tools and equipment
- B. Papermaking in the classroom (Hammermill Kit)
- C. Basic sizes and weights of paper
- D. Kinds of paper
  1. Newsprint
  2. Bookpapers
  3. Writing papers
  4. Cardboards
  5. Cover papers
  6. Miscellaneous papers
- E. Printing inks
  1. Pigments
  2. Vehicles
  3. Driers
  4. Kinds of inks and special uses
  5. Fitting inks to substrate press
  6. Printing ink problems
  7. Ordering, estimating, and handling

16756

VI. Relief printing

A. Introduction to letterpress industry
   1. Importance of printing
   2. Design and layout
      a. Preparation of rough copy
      b. Thumbnail sketches
      c. Type faces
      d. Points and picas
      e. Spacing materials
   3. Hand composition
      a. Type cases
      b. Composing stick
      c. Line gauge
      d. Galley
      e. Chase
      f. Planer block
      g. Quoins
      h. Furniture
      i. Reglets
      j. Lockup
   4. Platen and pilot press
      a. Preventative machine maintenance
      b. Make-ready
      c. Press operation
      d. Press cleanup
   5. Hot type (three dimensional) composition
      a. Foundry type
      b. Monotype
      c. Linotype
      d. Intertype
      e. Ludlow
      f. Wood type
   6. Cold type (two dimensional) composition
      a. Photocopying printed work
      b. Mechanical composition
         (1) Clip art
         (2) Hand drawn lettering and art work
         (3) Pressure-sensitive (self-adhesive) copy
         (4) Tab-type lettering
         (5) Adhesive type
         (6) Transfer type
         (7) Typewriter (impact) composition
   7. Original and duplicate printing plates
      a. Electrotypes
      b. Engravings
      c. Bycril
      d. Plastic printing plates
      e. Duplicate printing plates
      f. Stereotypes
   8. Project planning and layout
   9. Project
   10. Safety

B. Linoleum block carving and printing
   1. Tools and equipment
   2. Materials
   3. Design and layout
   4. Project planning
   5. Project
   6. Safety

C. Rubber stamp printing
   1. Tools and equipment
   2. Materials
   3. Type setting
   4. Machine operation
   5. Project
   6. Mounting
   7. Safety

VI. Planography (offset-lithography)

A. Principles of lithographic printing

B. Copy preparation

C. Offset equipment

D. Direct image plates

G

Operating an offset press.

16755

E. Make lithographic print

F. Production run

G. Safety

VII. Intaglio (gravure) printing

A. Tools, equipment, and supplies

B. Principles of gravure printing
1. Copper and steel engraving
2. Rotogravure printing
3. Collotype

C. Dry point etching in the classroom

D. Uses of dry point etched prints

E. Safety

VIII. Silk screen printing

A. Tools, equipment, and supplies

B. Principles of silk screen printing

C. Industrial uses of silk screen

D. Design and layout techniques

E. Cutting a stencil
1. Applying silk to a frame
2. Adhering to silk
3. Registry
4. Blockout
5. Inking
6. Making prints
7. Cleanup

F. Safety

IX. Bindery operations

A. Tools and equipment

B. Bindery supplies

C. Principles of binding
1. Saddle stitching
2. Side stitching
3. Binding post loose leaf
4. Mechanical plastic binding
5. Mechanical wire binding
6. Loom sewing
7. Ring binding
8. Padding

D. Paper cutting

E. Paper folding (collating)

F. Binding glues and adhesives

G. Book presses

H. Gold stamping

I. Marbling

J. Safety

Operating a folding machine.

X. Introduction to photography

A. Fundamentals of photographic cameras
1. Lenses
2. Camera bodies
3. Shutters
4. View finders
5. Aperature and shutter settings
6. Various cameras and their uses

16756

B. Photographic films and special uses

C. Photographic papers and special uses

D. Developing and fixing chemicals

E. Photographic printing processes

F. Making contact prints

G. Enlarging and projection printing

H. Preparation of slides

I. Color character of light filters and films

J. Color photography

K. Ultraviolet and infrared photography

L. Motion picture photography

M. Composition and better pictures

N. Portrait
   1. Outdoor
   2. Indoor

O. Copying, paper negatives, and microfilm photography

P. Principles of flash photography

Q. Laboratory experiments with fundamental processes

R. Safety

Graphic Arts for Senior High Schools (10-12)

I. Today's graphic arts industry and allied fields

A. Occupational opportunities
   1. Films
   2. Field trips to local industry

B. Practical work
   1. Composition
   2. Proofing
   3. Imposition
   4. Press work
   5. Auxiliary operations
      a. Perforating
      b. Scoring
      c. Slitting
      d. Numbering

C. Introduction to photography
   1. Lens
   2. Cameras
   3. Films
   4. Process work
      a. Line negatives
      b. Half-tone negatives

D. Introduction to offset-lithography
   1. Copy preparation
   2. Masking and stripping
   3. Plate making
   4. Presses
      a. Two-cylinder
      b. Three-cylinder

E. Photo stencil silk screen

F. Duplicating processes
   1. Mimeograph
      a. Stencils
      b. Paper
   2. Spirit
      a. Masters
      b. Paper

G. Safety

II. Practical problems in printing

A. Advertising (commercial art)
   1. Layout
   2. Design
   3. Color
   4. Copy preparation

B. Management
   1. Estimating
   2. Purchasing

C. A look at the future
   1. Electronics and computers
   2. Photostatic printing
   3. Letterset (dry offset)
   4. Web as opposed to sheet feeding

D. Occupational opportunities
   1. Skilled trades
   2. Management
   3. Education

E. Safety

G

16757

F. School production
   1. Forms
   2. Handbooks
   3. Play programs and tickets
   4. Athletic event programs

SELECTED INSTRUCTIONAL AIDS OR SOURCES

Only a limited amount of specific material is included here. Many entries are primarily for purposes of illustration. Sources that pertain to graphic arts are included if specific material is not listed below. Additional information of a general nature may be found on page 48.

Miscellaneous Materials

- Brochure: "Graphic Communications" (for the student)
- Booklet: "Graphic Communications" (for the administrator)
- Poster: "Graphic Communications, Not Just a Job — But a Career"
  Addressograph-Multigraph Corporation, 1200 Babbit Road, Cleveland, Ohio 44117.
- List: List of Printing and Graphic Arts Movies (free)
- Posters: Printing Education Week (free)
- Brochure: "Your Career in Printing and Graphic Arts" (free)
- Course of study: "Suggested Outlines for Courses of Study in Graphic Arts" ($1.50)

  International Graphic Arts Education Association, 1411 K Street, N.W., Washington, D.C. 20005.

Transparencies

The following is a list of companies that are producing transparencies. They should be contacted directly to obtain a complete list of such materials.

- Charles Beseler Company, 219 South 18th Street, East Orange, New Jersey 07018.
- DCA Educational Products, Inc., 4865 Stenton Avenue, Philadelphia, Pennsylvania 19144.
- Jam Handy Organization, 2821 East Grand Boulevard, Detroit, Michigan 48211.
- 3M Company, Visual Products, Box 3100, St. Paul, Minnesota 55101.
- United Transparencies, Inc., Box 888, Binghamton, New York 13902.

Filmstrips

- *How To Build a Silk Screen Frame,* 46 frames, nearest university film library.

Motion Pictures

- *Printing Through the Ages,* (18 minutes, B&W), nearest university film library
- *Training To Set Type,* (15 minutes, B&W) nearest university film library.
- *Platen Press Make-ready,* (13 minutes B&W) nearest university film library
- *Fundamentals of Photography,* (28 minutes, B&W) nearest university film library
- *Blue Sky Thinking* (silk screen process, color) Vlano Products Company, 210 East 86th Street, New York, New York 10028

Books

- *Bookbinding Made Easy,* Lee M. Klinefelter, The Bruce Publishing Company, 400 North Broadway, Milwaukee, Wisconsin 53201, 1960.
- *General Bookbinding,* Chris Groneman, McKnight and McKnight Publishing Company, Bloomington, Illinois 61701, 1946.
- *General Printing,* Glen V. Cleeton and Charles W. Pitken, McKnight and McKnight Publishing Company, Bloomington, Illinois 61701, 1953. (Junior and Senior)

16758

- *Graphic Arts,* Darvey E. Carlson, Charles A. Bennett Company, 237 North Monroe Street, Peoria, Illinois 61602, 1958. (Junior and Senior)
- *Graphic Arts,* Frederick D. Kagy, Goodheart-Wilcox, 18250 Harwood, Homewood, Illinois 60430.
- *Graphic Arts Procedures,* R. Randolph Karch, American Technical Society, 848 East 58th Street, Chicago, Illinois 60637, 1957. (Senior)
- *Linoleum Block Printing,* Francis J. Kafka, Taplinger Publishing Company, Inc., 119 West 57th Street, New York, New York 10019, 1953.
- *Photo-Offset Fundamentals,* John E. Cogoli, McKnight and McKnight Publishing Company, Bloomington, Illinois 61701, 1960.
- *A Practical Introduction to the Graphic Arts,* Hartley E. Jackson, McGraw-Hill Book Co., 330 West 42nd Street, New York, New York 10036, 1957.
- *Practical Photography,* Robert A. McCoy, McKnight and McKnight Publishing Company, Bloomington, Illinois 61701, 1959.
- *Silk Screen Printing,* James Eisenberg and Francis J. Kafka, McKnight and McKnight Publishing Company, Bloomington, Illinois 61701, 1957.

Magazines

- *Business Graphics,* Graphic Arts Publishing Company, 7373 North Lincoln Avenue, Chicago, Illinois 60646.
- *Graphic Arts Products News,* 6725 Sunset Boulevard, Los Angeles, California 90028.
- *Industrial Photography,* United Business Publications, 200 Madison Avenue, New York, New York 10016.
- *In-Plant Printer,* United Business Publications, Box 7307, Philadelphia, Pennsylvania 19101.
- *Printing Impressions,* Box 8161, Philadelphia, Pennsylvania 19101.
- *Printing Production,* Penton Building, Cleveland, Ohio 44113.
- *Reproduction Methods,* Box 14217, Annex Station, Cincinnati, Ohio 45214.
- *Visual Communications Instructor,* Syndicate Magazines, 25 West 45th Street, New York, New York 10036.

G

EQUIPMENT

The following list is presented as a guide in the selection of tools and equipment. The approximate number of each item needed for a small, medium, or large number of students is indicated. The list is set up on a unit shop basis. If the graphic arts area of a general shop is to be set up, some of the items could be reduced to about 1/4 or 1/3 the number listed.

	Class Size		
	Small (10)	Medium (15)	Large (20)
Furniture			
Book case	1	1	1
Filing cabinets	1	1	2
Drafting table	1	1	1
Metal cabinet for combustibles	1	1	1
Refrigerator	1	1	1

	Class Size		
Equipment	Small (10)	Medium (15)	Large (20)
Letter press			
Pilot press, hand operated with combination press stand and cabinet	1	1	2
Proof press and stand	1	1	1
Double type case bank	1	1	2
Imposing stone with galley rack underneath	1	1	1
10 point century old style type	1	2	3
12 point century old style type	1	2	3
18 point century old style type	1	2	3
24 point century old style type	1	1	2

16759

	Class Size		
	Small (10)	Medium (15)	Large (20)
36 point century old style type	1	1	2
10 point century old style bold type	1	2	3
Furniture, wood	1	2	2
Furniture, metal	1	1	2
Pica rules	3	6	6
Chase	2	4	6
Quoins and quoin key	4 pr.	10 pr.	10 pr.
Ink knife	1	1	2
Leads and slugs with rack	1	1	1
1 point rules	2	2	4
Brayer	1	1	1
Wood mallet	1	1	1
Paper knife	1	1	1
Paper cutter		1	1
Proof planer	1	1	2
Waste container (oily rags)	1	1	1
Benzine can	1	1	1
Gasoline safety can	1	1	1
Fire extinguisher	1	1	1
Composing sticks	2	3	6
Galleys	4	8	12
Photography			
Process camera	1	1	1
Camera — flash attachment	1	1	2
Safe lights	2	4	4
Light meter	1	1	2
Flood light	2	4	8
Enlarger	1	2	4
Print dryer (rotary drum)	1	1	2
Electric chemical mixer		1	1
1 gal. stainless steel mixing container	1	1	2
32 oz. stainless steel mixing pitcher	1	1	2
Developing tank	5	8	10
Developing tray	5	8	10
Contact printer	1	2	2
Timer	2	2	2
Thermometer	2	4	6
Funnel	3	6	6
16 oz. graduate	2	2	4
8 oz. graduate	2	4	6
Print roller	1	1	1
Tongs	6	9	12
Rubber gloves	1 pr.	1 pr.	1 pr.
Rubber apron	1	1	1
Stirring rod	3	3	6
Bookbinding			
Trimming shelf	1	1	1
Drilling jig	1	1	1
Drilling backstop	1	1	1
Back rounding metals	2	2	2
Sewing frame and board	1	1	1
Bookbinding vise	1	1	1
Hand drill	1	1	1
Bookbinding bench	1	1	1
Press, hand screw	1	1	1
Offset			
Stone, lithograph	1	1	1
Press	1	1	2
Light tables	1	2	3
Electric typewriter (for setting type)	1	1	1
Photographic strip printer	1	1	1
Platemaker	1	1	1
Paper drill		1	1
Folding machine		1	1
Foot stapler	1	1	1
Collator			1
1 gal. gas safety can	1	2	2
1 gal. mixing beaker	1	1	1
Drawing boards	2	4	6
T squares	2	4	6
Silk screen			
Drying rack	1	1	1
Silk screen frames	2	4	6
Squeeges	2	2	3
Brush	1	1	1
Stencil knives	2	2	3
Linoleum block			
Bench hook	1	1	1
Carving tool set	1	1	1

INDUSTRIAL
PLASTICS

16762

12/113

Plastics is an industry evolving at a rate seldom experienced by other industries. It is out of necessity to meet the needs of our demanding social and technological societies that this is true. Because of its astounding rate of change few industrial arts teachers have realized the necessity of teaching this rapidly emerging discipline.

Plastics as discussed here is not to be confused with craft plastics activities of sawing, filing, buffing, and internal carving, which has been taught for years in many Iowa schools. Plastics is an intriguing and cardinal component of industry, and it is most important that students know something of the industry and manufacturing methods common to it.

A variety of activities utilizing plastic materials may be carried on at the elementary level and could lead to an investigation of the plastic industry — how man has supplemented traditional materials provided by nature. Classroom activity can be enriched as learners become involved with and knowledgeable about plastics, the material we all use but know so little about.

If time permits, specific course work in this exciting area should be taught at the junior high school level. There is more than enough subject material to offer work here and at the senior high school level, too. A certain amount of makeshift equipment can be developed by the teacher or students under the teacher's supervision, but an increasing amount of specialized equipment is being produced commercially. Instruction can be provided in a general shop or a unit wood shop if space for the specialized equipment is available. As additional specialized equipment is acquired, it may be desirable to set up a special unit shop for industrial plastics.

This area is well suited for the utilization of mathematical and scientific principles, since the material itself is man-made. This is true in the development of equipment; but, even if such activity is not pursued, the development of various forms and molds and the study of the chemistry of synthetic materials provides considerable opportunity for introducing mathematics and science, and originality as well. The heat that is involved in many industrial plastics operations requires that emphasis be placed on the development of good safety habits. Courses in this area provide ample opportunity to use group projects, problem solving, and mass production as well as the traditional approach of each student's working on a suitable project at his own pace.

Objectives

Every student should have the opportunity:

- To understand the present status and vast potential of plastics in our society.
- To develop a degree of familiarity with the kinds, composition, and characteristics of plastics.
- To know the industrial processes employed to form and fabricate plastic materials into functional items.
- To learn to select suitable plastic materials for given uses and forming techniques.
- To learn to use plastic forming machines and equipment properly.
- To learn to plan and construct limited dies and molds for molding, forming, and fabricating plastics.

Content

It is recognized that sequence of instruction and extent of student involvement may be modified by local conditions. The suggested content is presented as a guide only. How this or other information is presented is the responsibility of the individual instructor. No effort has been made to specify levels of content. One or more complete courses in this important area at several different levels may be designed from the following outline. Many good sources for student activities are included in textbooks and professional journals. For illustrative purposes, some useful activities are included and are illustrated for quick reference.

I. Introduction

A. Development of the plastics industry

B. Applications of plastics products
1. Construction
2. Transportation
3. Forming
4. Aerospace
5. Home consumer products

16763

C. Classification and identification of plastics
   1. Common plastics
   2. Engineering plastics

Activities

- Tabulate the use of plastics.
- Identify and classify common plastic items.

II. Molding

A. Injection molding
   1. Historical development
   2. Machine components and their functions
   3. Industrial considerations
   4. Principles of operation

B. Extrusion
   1. Historical development
   2. Machine components and their functions
   3. Industrial considerations
   4. Principles of operation

C. Blow molding
   1. Historical development
   2. Machine components and their functions
   3. Industrial considerations
   4. Principles of operation

D. Compression molding
   1. Historical development
   2. Machine components and their functions
   3. Industrial considerations
   4. Principles of operation

E. Transfer molding
   1. Historical development
   2. Machine components and their functions
   3. Industrial considerations
   4. Principles of operation

F. Rotational molding of powdered polyethylene
   1. Historical development
   2. Machine components and their functions
   3. Industrial considerations
   4. Principles of operation

Activities

- Visit plastics molding industries.
- Make a collection of plastic parts molded by each method.
- Injection mold plastic objects in class.
- Experiment with color mixing.
- Design and construct a unit to do extrusion on an injection molder.
- Extrude plastic materials.
- Blow mold an article from stock plastic tubing.
- Compression mold an object.
- Rotational mold an article of powdered polyethylene.
- Evaluate and compare various molded objects.
- Compare and contrast various molding processes.

Plastic injection molding machine.

16764

III. Thermoforming

A. Methods
   1. Vacuum cavity forming
   2. Drape vacuum forming
   3. Vacuum snap-back forming
   4. Plug and ring forming
   5. Air pressure forming
   6. Matched mold forming
   7. Mechanical stretch forming
   8. Combination of vacuum and pressure forming

B. Scientific principles involved

C. Applications

- Design a model or pattern for a mold.
- Fabricate a mold for injection or compression molding.
- Repair a damaged mold.
- Construct a form for vacuum forming.
- Make a one-piece and a two-piece mold by using elastomers.

- Visit a thermoforming operation in industry.
- Thermoform plastics in class.
- Evaluate the product and compare with molded products.
- Compare and contrast thermoforming with molding.

IV. Moldmaking and form construction

A. Moldmaking
   1. Mold design
   2. Moldmaking materials
      a. Gypsum cement
      b. Metal filled epoxy
      c. Metal molds
   3. Methods of moldmaking

B. Form construction
   1. Designing forms
   2. Methods of construction

C. Elastomers
   1. General characteristics of elastomers
   2. Specific elastomers
   3. Uses of elastomers
   4. Moldmaking with RTV materials

V. Bonding

A. Welding and cementing

   1. Cohesive bonding
      a. Welding of thermoplastics — common joints, application methods, and technical considerations in each of the following
         (1) Hot gas welding
         (2) Heated tool welding
         (3) Friction welding
         (4) High frequency welding
         (5) Ultrasonic welding
      b. Solvent cementing — common joints, application methods, and technical considerations.
         (1) Solvent cement
         (2) Dope cement

   2. Adhesive bonding — common joint, application methods, and technical considerations
      a. Monometic cements
      b. Polymerizable cements

B. Methods of heat sealing

   1. Electrical resistance sealing
   2. High frequency sealing
   3. Ultrasonic generation
   4. Heat shrinking

I

16765

Activities

- Experiment with the various types of welding processes.
- Observe and determine the method of bonding used to fabricate various plastic objects.
- Arrange a project using welding as a process.
- Experiment with heat selin
- Experiment with heat sealing on various plastic films.
- Make a kite using plastic film which can be heat sealed.

VI. Laminates

A. Reinforced plastics
   1. Development of reinforced plastics
   2. Characteristics of reinforced plastics
   3. Material used in reinforced plastics
   4. Techniques of fabricating

B. Low pressure laminates
   1. Heat laminating
   2. Pressure sensitive laminating

C. High pressure laminates
   1. Structural types
   2. Materials
      a. Non-plastic
      b. Resins
   3. Machines and equipment
   4. Laminating process

Activities

- Make reinforced items by using open molds, pressure bag method, and male and female matched molds.
- Experiment with various reinforcing materials.
- Visit an industry which produces reinforced plastic objects.
- Laminate social security card and other cards.
- Laminate plastics to other materials.
- Develop a chart of heat ranges for laminating various plastics.
- Compare high pressure laminates with finished wood samples.
- Make a high pressure laminate circuit board.
- Experiment with different resins and fillers.

VII. Encapsulation

A. Embedding

B. Casting

Activities

- Experiment with different resins, catalysts and cure cycles.

VIII. Foams

A. Expandable polystyrene beads
   1. Polystyrene chemistry
   2. Processing techniques
   3. Applications
   4. Molding procedures

B. Expandable polyurethane resin
   1. The process
      a. Open cell
      b. Closed cell
      c. Foaming and blowing agent
      d. Uniformity of cells
   2. Urethane foam characteristics
   3. Procedure

16766

Activities

- Mold bead foam in a cast aluminum mold using a pressure cooker.
- Mold bead foam in a thin-walled mold immersed in boiling water.
- Mold bead foam in an aluminum foil mold using a radiant source.
- Mold coasters for glasses, thermos-type bottles, and swimming pool bouy with expandable resin foam.

IX. Coatings

A. Definitions and purposes of coating

B. Plastic coating resins

C. Basic coating processes
1. Painting
2. Dipping (hot and cold)
3. Fluidized bed coating
4. Vacuum metallizing
5. Electroplating
6. Silk screening
7. Calendering
8. Flame spraying
9. Extrusion coating

D. Techniques for
1. Cold dipping
2. Hot dipping
3. Fluidized bed
4. Electroplating

Activities

- Dip coat an object by the hot and cold process.
- Experiment with variations of temperature.
- Make a display of vacuum metallized parts.
- Compare electroplated samples with vacuum metallized products.
- Electroplate ABS plastic products.

X. Vinyl dispersion-thermofusion

A. Vinyl dispersion
1. Materials used
2. Types of castings
3. Mold considerations
4. Molding process
5. Applications
6. Industrial considerations

B. Thermofusion molding
1. Molding procedures
2. Mold preparation
3. Industrial and consumer considerations

C. Rotational molding of vinyl dispersion
1. Preparation of the mold
2. Molding
3. Curing

Activities

- Slush mold an article.
- Make articles by the thermofusion molding process.
- Mold an article by rotational molding process.

XI. Decorating

A. Decorating, coloring, and finishing
1. Coloring
   a. Definition of colorant
   b. Three general types of colorants
2. Decorating
   a. Inlaying
   b. Printing
   c. Embossing, engraving, decalcomania
3. Finishing
   a. Sanding, buffing, polishing
   b. Air blasting and etching
   c. Deflashing — with and without air

16767

d. Chemical solvent
e. Flame polishing

B. Hot foil stamping
1. Description
2. Equipment, set-up and operation

XII. Materials

A. Testing plastic materials
1. Mechanical tests
a. Purpose
b. Strength
2. Permanence properties tests
a. Dimensional stability tests
b. Weathering tests
c. Effects of radiation
d. Moisture resistance
e. Effects of molded stresses
3. Thermal properties tests
4. Burning tests
5. Specific gravity tests

B. Plastics chemistry
1. Historical origin
2. Families of plastics
3. Branches of chemistry
4. Thermoplastics
5. Thermoset plastics

XIII. Guidance — occupational opportunities in plastics

A. General employment outlook

B. Wage consideration

C. Working conditions

D. Education and training

E. Plant locations

F. Future of the industry

SELECTED INSTRUCTIONAL AIDS OR SOURCES

Only a limited amount of specific material is included here. Many entries are primarily for purpose of illustration. Sources that pertain to industrial plastics are included if specific material is not listed below. Additional useful information of a general nature may be found on page 48.

Miscellaneous Materials

- Booklets: "Forming of Large Area, Deep Drawn Parts," and "Injection Molding Technology Fundamentals," Dow Chemical Company, Plastics Dept., Midland, Michigan 48640.

16768

- Chart: "How We Get Our Plastics," Hinchman Manufacturing Company, Inc., 259 East First Avenue, Roselle, New Jersey 07203.

- Booklets: "The Fundamentals of Blow Molding," "Fundamentals of Thermoplastic Extrusion," "Injection Molding," and "Production Techniques for Vacuum Forming," Monsanto Company, Hydrocarbons and Polymer Division, 800 North Lindbergh Boulevard, St. Louis, Missouri 63166.

- Booklet: "Plexiglass Design and Fabrication Data," Rohm and Haas Company, Plastics Dept., Philadelphia, Pennsylvania 19105, revised 1964.

- Booklet: "Plastics Engineering Handbook," Third edition, Society of the Plastics Industry, Inc., Reinhold Publishing Corporation, 430 Park Avenue, New York, New York 10022, 1960.

- Booklet: "The Story of the Plastics Industry," The Society of the Plastics Industry, Inc., 250 Park Avenue, New York, New York 10017.

- Leaflet: "Trade Publications and Books Pertaining to the Plastics Industry — A Partial List," The Society of the Plastics Industry, Inc., 250 Park Avenue, New York, New York 10017.

- Resource Unit: "An Experimental Resource Unit in Plastics for Industrial Arts," University of the State of New York, Albany, New York 12203, 1966.

- Catalog: Film Catalog of the Plastics Industry, The Society of the Plastics Industry, Inc., 250 Park Avenue, New York, New York 10017.

Transparencies

The following is a list of companies that are producing transparencies. They should be contacted directly to obtain a complete list of such materials.

- Charles Beseler Company, 219 South 18th Street, East Orange, New Jersey 07018.

- DCA Educational Products, Inc., 4865 Stenton Avenue, Philadelphia, Pennsylvania 19144.

- Jam Handy Organization, 2821 East Grand Boulevard, Detroit, Michigan 48211.

- 3M Company, Visual Products, Box 3100, St. Paul, Minnesota 55101.

- United Transparencies, Inc., Box 888, Binghamton, New York 13902.

Motion Pictures

- *Plastics: Industrial Processes and Products,* (24 minutes, sound/color, correlated with *Plastics Technology,* by Robert S. Swanson). Price $200 from Stout State University, Menomonie, Wisconsin 54751. May be available for rental from nearest university film library.

Books

- *Introduction to Plastics,* Lionel K. Arnold, The Iowa State University Press, Ames, Iowa 50010, 1968.

- *Plastics,* Harry J. DuBois, Reinhold Publishing Corporation, 430 Park Avenue, New York, New York 10022, 1968.

- *Plastics Technology,* Robert S. Swanson, McKnight and McKnight Publishing Company, Bloomington, Illinois 61701, 1965.

Magazines

- *Machine Design,* Plastics-Reference Issue, Penton Building, Cleveland, Ohio 44113, June 16, 1966.

- *Modern Plastics Magazine,* 1301 Avenue of the Americas, New York, New York 10019, monthly publication.

EQUIPMENT

It is assumed that industrial plastics will be taught in a wood or general shop that is reasonably well equipped. Additional special equipment that may be required is included in the following list.

16769

	No. Needed
Basic Equipment	
Balance	1
Compression/laminating press; 12 ton capacity or larger	1
Electric oven, 26"x 20"x 20" or larger	1
Electroplating unit, 5 amp. or larger	1
Heat sealer	1
Hot stamping machine	1
Injection molding machine, $\frac{1}{5}$ oz. or larger	1
Mold blank for molding machine	6
Plastics welding unit	1
Pressure cooker, 10 qt. or larger	1
Surface pyrometer 50°-600° range	1
Vacuum, pressure and mechanical former with heating unit, material clamping device, and vacuum and pressure sources, 18"x 18" or larger	1
Enrichment Equipment	
Blow molding attachment for extruder	1
Extruder, laboratory type, $\frac{3}{4}$" screw or larger	1
Materials tester — tensile, compression, shear	1
Rotational molding machine	1
Spray gun equipment	1

SUPPLIERS OF TOOLS AND EQUIPMENT

METALS

241

16671

123

The various fields of metal have played an important role in the development of our present civilization. Today, millions of people are employed in the metal industries. The products they produce influence the lives of every individual.

The study of metal and its contribution to the progress of man and the strength of the nation is appropriate at the elementary level.

Metals is a vital area in the junior high school industrial arts program. Here, students should acquire skill and knowledge in the basic processes and uses of metals. A knowledge of industrial applications of metal processes and an appreciation of safe practices in metal work should be developed. The student should also gain an understanding of some of the occupational opportunities and requirements for employment in the metal trades and industrial fields. They should catch a glimpse of the exciting activity that can be pursued if they elect to take additional work in this area in senior high school.

At least two years of sequential course work in metals should be available in the senior high school. Semester length courses in certain areas such as foundry, welding, and sheet metal and a full year course in machine metals may be taught in addition to a basic course in general metals. Equipment and facilities adequate for some specialization must be provided. Course work at this level, despite the high degree of proficiency attained by some students, should not be considered as training for earning a wage.

The metals area is potentially rich in opportunities for students to apply scientific and mathematical principles. Students deficient in reading ability are often motivated to improve in this area when they find that technical papers contain answers to problems they long to solve. Writing skills can also improve as students seek to record information they have struggled to find. Safety education is of critical importance in most of the work done in metals and should be emphasized accordingly. The opportunity to develop original designs exists in a number of the metals areas. Individual manipulative activity of many kinds (projects, exercises, shop experiments) as well as group projects, mass production, and other newer approaches can all be utilized to good advantage in this important subject-matter area.

A reference library is vital to the comprehensive shop.

Metals for Junior High School (7-9)

Metals is indeed an important activity in the junior high school industrial arts program. The program should be planned to meet student needs and should be undergirded with adequate facilities, instruction, and time.

The first course (or unit) in metals should be devoted to developing fundamental concepts. It is important that a number of different areas be explored rather than attempting to develop a high degree of skill or depth of knowledge in a single area. Students should have a minimum of 25 class periods (five weeks) of instruction before completing junior high school. If time permits, as many as 105 class periods (21 weeks) or more could be spent profitably in junior high school metals.

The order of units in this outline is not intended to interfere with flexibility in the sequence of presentation. Likewise the extent of class involvement with each area may vary somewhat depending on individual circumstances. In many instances facilities will dictate that several shop activities be pursued at the same time. It is hoped that the teacher will supplement this material to keep pace with the changing conditions of our industrial society and the needs of his students.

M

16672

Objectives. Every student should have the opportunity:

- To have experiences which will assist in planning of future educational and occupational pursuits.
- To acquire an understanding of the occupational opportunities in the metal industries.
- To gain knowledge of industrial processes related to the metalworking industry.
- To acquire skill in the basic use of the common tools in metals.

Content. Areas of metals should be divided into two categories — major and minor. The major areas should include foundry, oxyacetylene and electric welding, sheetmetal, and machine metal. Bench metal, metal spinning, and forging and heat treating are considered minor areas. The areas which are included in a junior high school program will depend on the grade level at which metal is taught and the amount of time devoted to this subject. A broad program in which the student has fundamental experiences in as many of the areas as possible is preferable to a program which encompasses only one or possibly two areas.

It seems reasonable to assume that this guide encompasses more than five weeks of study, particularly if it involves grades seven, eight, and nine. The teacher should recognize this as a guide and draw from it those portions which best fit the needs of his students and his teaching situation.

Appropriate student activities for this area are readily available in textbooks and professional journals.

I. Introduction to general metals

  A. History

  B. Industrial uses

II. Kinds of metals

  A. Grouping

  B. Characteristics

III. Measuring devices

  A. Types

  B. Uses

IV. Metal fasteners

  A. Types

  B. Applications

V. Tools and materials used in metals

  A. Types

  B. Applications

VI. Industrial uses

VII. Safety

VIII. Orientation on units of future study

  A. Major areas
    1. Foundry
    2. Oxyacetylene welding
    3. Electric arc welding
    4. Sheetmetal
    5. Ornamental iron
    6. Machine metal

  B. Minor areas
    1. Metal spinning
    2. Bench metal
    3. Forging and heat treating

IX. Occupations related to metalworking

X. Operations performed in junior high metals

NOTE: Each area should have operations listed in order of difficulty (See senior high school material which follows). A junior high student probably will not complete all the operations in junior high. Some may be either started or completed in the senior high school.

Metals for Senior High Schools (10-12)

Students who become interested in metals as a result of experiences in this area at the junior high level should be able to follow this interest through at least a two-year sequence in senior high school.

In this outline metals areas have been divided into two categories — major, for those which are

16673

of predominant importance industrially; and minor, for those which are of relatively lesser importance industrially or because school shop facilities ordinarily do not permit dealing with the area in more than a minor manner. The major areas include foundry, oxyacetylene and electric welding, sheetmetal, and machine metal. Bench metal, metal spinning, forging, and heat treating are considered minor areas.

No intent has been made to split the units between junior high school and senior high school. It would be better that each unit start with simple and proceed to complex. It could then be taught in either junior or senior high.

Since the following content is outlined to cover various age groups and abilities, the instructor should feel free to glean the outline and use those portions which best accomplish his course objectives.

Objectives. Every student should have the opportunity:

- To have some understanding about occupations in the metals industries.
- To develop an understanding and appreciation of good design and craftsmanship.
- To apply science, mathematics, social sciences, and the language arts in the area of metals.
- To develop good safety and health practices in the area of metals.
- To enjoy valuable experiences with metalworking tools, materials, and processes.
- To develop the ability to do independent planning and creative thinking, leading to self expression in the area of metals.
- To develop an understanding of the industrial processes and technology in the metalworking industry.

Content. The material which follows is not organized into courses, but there is more than enough material to permit the basis for several courses. All areas may be covered in a general metals course which would build on experiences gained in the metals course work offered at the junior high school level. This could be followed with semester length or full year courses in major areas. It is recognized that course titles, sequence of instruction, and extent of student involvement may be modified by local conditions. The suggested content is presented as a guide only. How this or other information is presented is the responsibility of the individual instructor. Appropriate student activities for this area are readily available in textbooks and professional journals.

Foundry — Major Area

I. Introduction to foundry

A. History

B. Safety

II. Identification of metals (non-ferrous)

A. Capabilities

B. Classification and melting temperature

III. Pattern making

A. Nomenclature

B. Methods

Foundry practice should be taught.

M

16674

IV. Foundry sand

A. Types

B. Characteristics

V. Crucibles

A. Types

B. Uses

VI. Flasks

A. Nomenclature

B. Applications

VII. Casting process

A. Tools

B. Uses

VIII. Occupational awareness

A. Types of occupations related to foundry

B. Working conditions and salary

C. Requirements for job entry

D. Employment outlook

IX. Safety instruction

A. Attitudes

B. Apparel

C. Physical plant layout

X. Operations

A. Planning and making patterns

B. Conditioning sand

C. Ramming up molds (one piece flat-back patterns)

D. Cutting sprues, pouring basins, sprue bases, runners, gates and risers

E. Removing patterns

F. Repairing and closing molds

G. Lighting the furnace

H. Fluxing metal

I. Pouring

J. Removing gating system and cleaning castings

K. Molding different kinds of patterns
1. Split patterns
2. Patterns with irregular parting lines
3. Matchplates
4. Patterns requiring check molding

L. Making and placing cores

M. Other foundry processes (other than green sand molding)
1. Shell cores
2. Shell molding process
3. Permanent mold casting
4. Plaster mold casting
5. Precision investment casting (ceramic shell mold)

Welding — Major Area

I. Introduction to welding

A. History

B. Safety

II. Welding — oxyacetylene

A. Equipment
1. Nomenclature
2. Types and uses

B. Selection and uses of welding rod

C. Fluxes

D. Types of welds

E. Industrial applications

III. Operations

A. Selecting correct tips

B. Assembling torches

16775

C. Setting regulators

D. Lighting and adjusting

E. Determining correct welding procedures
   1. Mild steel welding (flat position)
      a. Melt strips
      b. High flange weld
      c. Low flange weld
      d. Outside corner weld
      e. Beads
      f. Thin butt weld
      g. Thick butt weld
      h. Lap weld
      i. "T" weld
      j. Brazing
      k. Bronze welding
   2. Cast iron
      a. Welding
      b. Bronze welding
   3. Non-ferrous welding and brazing
      a. Aluminum
      b. Stainless steel
   4. Out of position welding
   5. Hard surfacing
   6. Silver soldering
   7. Pipe welding

F. Cutting

IV. Welding — electric arc

A. Equipment
   1. Nomenclature
   2. Types and uses

B. Electrode selections

Modern welding equipment is important.

C. Types of welded joints

D. Industrial applications

V. Metallurgy

A. Researching

B. Specimen testing
   1. Face bend
   2. Root bend

C. Etching

TOOLS AND EQUIPMENT

The following list is presented as a guide in the selection of tools and equipment needed to teach metals. The approximate number of each item needed for a small, medium, or large number of students in a unit shop in metals is indicated, as well as items needed to equip a metals area of a general shop.

16783

Basic Equipment for the Metals Area of a General Shop

	Number Needed
General (bench metal)	
Anvil 100 lb.	1
C Clamps, 4", 6", 8"	4 each
Chisel, cold, $\frac{3}{8}$", $\frac{1}{2}$", $\frac{3}{4}$"	10 each
Dividers, 6" or 8"	2
Dresser, emery wheel	1
Drill, hand	1
Drill press	1
Drills, sets, high speed, fractional and number	1 each
Files, assortment, 8" and 10", mill, flat, round, half round, three square	
File card and brush	6
File handles	20
Face shields, safety	6
Grinder, pedestal or bench	1
Hacksaw frames	3
Hammer, ballpeen, 8 and 12 oz.	2
Nippers, end cutting, 10"	1
Mallets, wood, assortment	4
Pliers, combination	2
Rule, steel, 24"	1
Screwdrivers, 4", 6", 8"	2 each
Scriber	4
Square, combination, 12"	2
Tap and die set	1
Vise, machinist, 3" or 3½" jaws	2
Wrench, adjustable end, 8"	1
Sheet metal (special tools)	
Awls, scratch	4
Bar folder*	1
Box and pan brake, 24" to 48"	1
Bench, complete with benchplate	1
Bench, soldering	1
Furnace, bench, gas	1
Groover, hand, No. 2 and No. 4	1 each
Hammer, riveting, 12 oz.	2
Hammer, tinners setting, 12 oz.	1
Rivet sets, No. 4, 5, 6, 7, 8	1 each
Rotary machine, deep throat (combination) (with burring, turning, wiring, crimping and beading rolls)	1
Rule, circumference, 36"	1
Seamer, hand	4
Shear, squaring*	1
Snips, aviation, right and left cut	1 each
Snips, combination 3" jaw	3
Slip roll forming machine	1
Soldering coppers, 1 lb. pr., 2 lb. pr.	1 each
Stake, conductor, candlemold, hatchet, beakhorn, blowhorn, square, hollow mandrel, coppersmith	1 each
Ornamental metal (special tools)	
Buffing head	1
Clamps, spring	6
Polishing wheels, cloth	2
Jewelers saws	3
Swiss pattern files	1 set
Tray — for etching	1
Jar — for pickling	1
Metal casting	
Bellows, molders	1
Bench, molding	1
Bulb, sponge	1
Crucible, graphite	2
Crucible tongs	1
Crucible pouring ring	1
Flask and molding boards, 10"x 12"	1 set
Founder's trowel	1
Founder's slick and spoon	1
Melting furnace	1
Hammer	1
Riddle, No. 8 mesh	1
Sand, foundry, 100 lb. bag	3
Shovel, square point, short handle	1
Sprue cutter	1
Welding	
Arc welder, A.C. 180 amp., complete with cables, holders, ground clamp	1
Arc welding helmet with No. 10 filter	1
Arc welders gloves	1 pr.
Oxyacetylene welding outfit, complete with hose, lighter, gloves, etc.	1
Welding trips for torch, No. 1, 3, 5, 7	1 each
Welder, spot*	
Machine metal (special tools)	
Calipers, inside, 6"	1
Calipers, outside, 6"	1
Center gauge No. 391	1
Combination countersink and drill	1 doz.
Drill press, complete	1
Engine lathe, 10" or 12", complete	2
also lathe dog, ½", ¾", 1", 1¼", 1½"	1 each
Universal 3-jaw chuck	1

*Desirable but not absolutely necessary.

STEP BLOCK W.S.51.

H-BLOCK W.S.52.

SLIDE BLOCK W.S.53

DOVETAIL W.S.54.

ILLUSTRATION SHEET 24.

Man has always been concerned with efficient means of moving loads, transporting himself from place to place, and accomplishing work more efficiently than can be done by manpower alone. The area of power in industrial arts deals with similar concerns.

Iowa is developing into an important industrial state. The evolution of this industrial movement has been and continues to be dependent on power. This trend in Iowa toward more industrialization emphasizes the importance of the knowledge of power production, power transmission, and power use.

The imaginative elementary teacher, perhaps with the help of the industrial arts teacher, should be able to plan a number of activities pertaining to power that would enrich instruction and reduce abstractions. Construction of simple devices like water wheels and windmills by small groups of students can do much to make basic principles meaningful and capture the interest of students. Educational field trips can be made to hydroelectric plants. Units on transportation can provide wholesome appreciations for transportation of the past and present along with some expectations for what the future may bring.

If time permits, specific course work in this exciting area should be taught at the junior high school level. Students at this level seem to thrive on mastering the theory of small engines and the challenges involved in disassembling, reassembling, running, and testing them.

Instruction in this area in the senior high school can capitalize on the high degree of interest most teenage boys have in automobiles. At least two years of sequential course work in this area should be available, which, despite the high degree of proficiency attained by some students, should not be considered as training for earning a wage. Instruction in power mechanics and auto mechanics can hardly proceed without involving the practical utilization of scientific principles. In addition, many opportunities exist for using mathematics in the projection of test results and calculating horsepower. Although this area is not particularly hazardous, many opportunities exist for important safety lessons to be taught and good safety habits to be learned. Activities usually proceed on an individual or small group basis, and some time can be spent profitably in testing and experimental work in addition to the diagnosis, disassembly, reassembly and similar activity common to this area.

Power Mechanics for Junior High Schools (7-9)

The junior high program in power should be introductory and exploratory in nature. It should provide the student with the opportunity to learn basic concepts related to power and to develop some fundamental shop skills and good work habits. A minimum of 25 periods (five weeks) of instruction in this area should be presented at this level. If time permits as many as 95 periods (19 weeks) or more could be spent profitably in power mechanics at the junior high level.

Power mechanics is not new to industrial arts, but it would be new to many Iowa schools. Unfortunately, it has not found its way into industrial arts programs to the extent that it should. It is strongly recommended that every effort be made to include a unit or course in power mechanics in junior high schools where it has not been offered and to strengthen the courses that presently exist.

Objectives. Every student should have the opportunity:

- To develop an understanding of the sources of power.
- To develop a realization of how power is applied.
- To develop an awareness of the power-producing devices that exist.
- To develop an understanding of the operation of power units.
- To develop the ability to use the tools and equipment common to the power industry.
- To develop the ability to perform operations necessary to the repair and maintenance of power units.
- To develop a desire for continuing investigation into the area of power.
- To develop judgement in selection and purchase of power units.

P

16791

- To develop personal behavior traits, habits, and attitudes which complement the power industry.

- To develop an awareness of the opportunities existing in the power industry.

Content. The following outline includes content which would be appropriate for junior high school course work in power mechanics. It is presented in sequential order, but this is not meant to interfere with flexibility in the order of presentation. The extent of class involvement with certain units may vary somewhat depending on individual circumstances. No attempt has been made to identify specific courses. The material here may be organized into one course or several depending on local scheduling arrangements and the equipment available. Since this area may be less familiar than some, teachers may find suggested student activities to be particularly helpful. Some are included and illustrated for quick reference.

I. Sources of energy

A. Mechanical (physical)

B. Heat

C. Chemical

D. Electrical

E. Nuclear

II. Chronological development of power-producing devices

A. Elements
1. Sun
2. Rain
3. Freezing
4. Wind
5. Water

B. Manpower

C. Animal power

D. External combustion engines (steam)
1. Hero's device
2. Steam engines
   a. Savery
   b. Newcomen
   c. Watt
   d. Hornblower
   e. Woolf
3. Steam engine-driven devices
   a. Locomotives
   b. Steamboats
4. Steam turbines
   a. Principle of operation
   b. Uses

16792

Activities

- Build an atmospheric steam engine.
- Build a piston-type steam engine.
- Make a pressure-volume diagram of a steam engine.
- Report on how the steam engine influenced the development of the United States.
- Report on steam and the industrial revolution.
- Visit a steam engine exhibition.
- Build a steam turbine.
- Build a model of a steam turbine powered ship (nuclear submarine).
- Draw plans for a steam engine.

E. Internal combustion engines
   1. Reaction engines
      a. Rockets
         (1) Solid fuel
         (2) Liquid fuel

Activities

- Read about various rocket uses.
- Build models of solid and liquid fuel rockets.
- View film on the development of rockets.

      b. Jets
         (1) Ram
         (2) Pulse
         (3) Turbo
         (4) Turbo-prop
         (5) Gas turbines for cars and trucks

Activities

- Operate a model jet engine.
- Visit an airport or a vocational school to see a jet aircraft engine.
- Report on success of race car turbine engines.

   2. Piston engines
      a. Two-stroke
         (1) History
         (2) Operation
         (3) Uses

Small engine repair.

Activities

- Observe two-stroke engines in operation.
- Bring model airplane engines in to demonstrate.
- List the uses of a two-stroke engine.
- Disassemble a two-stroke engine, become familiar with its parts, and reassemble it.

      b. Four-stroke engine
         (1) History
         (2) Operation
         (3) Types
            (a) Gas

P

16793

(b) Diesel
(c) LPG
(4) Uses
(5) Configuration
(6) Systems
(a) Electrical
(b) Fuel
(c) Lubrication
(d) Cooling
(7) Materials
(a) Parts
(b) Gaskets
(8) Safety precaution for operation

- Trace the history of the four-stroke engine.
- Explain the difference between two-stroke and four-stroke engines.
- Build a plastic model engine and identify all parts.
- Explain the difference between diesel and gas engines.
- Describe in-line, V-type, OHV, L-head engines.
- Examine a diesel tractor or truck.
- Disassemble a four-stroke single cylinder engine, reassemble it, start it, adjust carburetor.
- Examine the four systems of the engine.
- Trace each circuit--electrical, fuel, lubricant, coolant.
- Test each for proper operation.
- Adjust each system (where applicable).
- Distill some crude oil to get petroleum products.
- View a film on petroleum refining.
- Construct a display of a fractional distillation tower.

3. Rotary combustion engine (Wankel)
   a. History
   b. Operation
   c. Uses

F. Electrical power

Note: Except for ignition, starting and charging systems, electrical power is left to the electricity-electronics area.

G. Nuclear power

- Report on nuclear warfare.
- Build a model of a nuclear power plant.
- Tour a nuclear power plant.

III. Power Transmission

A. Mechanical
   1. Principles
      a. Simple machines
         (1) Lever
         (2) Wheel and axle
         (3) Inclined plane
         (4) Pulley
         (5) Wedge
         (6) Screw

- Perform experiments using the six basic machines.

   2. Basic mechanisms
      a. Pulley and belt
      b. Sprocket and chain
      c. Cam and eccentric
      d. Bell crank and lever
      e. Piston and cylinder
      f. Spring
      g. Shafts
         (1) Extension
         (2) Crank
         (3) Cam

16794

Activities

- Disassemble and operate bicycle components -- single speed, 3-speed, and 10-speed.

h. Couplets
   (1) Positive
   (2) Friction
   (3) Fluid

Activities

- Examine and operate various clutches.

i. Gears
   (1) Types of teeth
      (a) Spur
      (b) Helical
      (c) Spiral
   (2) Arrangements
      (a) Internal teeth
      (b) External teeth
      (c) Rack and pinion
      (d) Worm
      (e) Bevel
      (f) Herringbone
      (g) Idlers
      (h) Planetary combinations

Activities

- Disassemble and examine transmission, steering gears, differential, and planetary gears of a 3-speed bicycle, and reassemble.

j. Bearings
   (1) Plain
      (a) Solid
      (b) Bushing
      (c) Split (insert)
   (2) Antifriction
      (a) Ball
      (b) Roller
      (c) Pin or needle

Auto Mechanics for the Senior High Schools (10-12)

Should power mechanics not be taught at the junior high school level, it would be best to offer a sound one-semester or full year course in this area and consider it as a prerequisite for auto mechanics.

Further study can be done in most areas of power without the automobile as the subject; however, the automobile serves admirably as a self-contained, portable power mechanics laboratory. Many of the energy conversion and transmission devices studied in power mechanics are used on the automobile. Because of this and because of the availability of the automobile, it is most frequently used as the medium for advanced studies in power.

It is important that instruction in auto mechanics be planned and executed in a purposeful manner. Tinkering in a hit-or-miss fashion should not be tolerated. "Junkers" should not be allowed to take up valuable floor space in the shop nor allowed to clutter the exterior. Extra interest and valuable experience can result from modifications, but these should be carefully designed and based on scientific principles. The instructional program must never suffer to accommodate owners of cars which have been accepted for repair or tune up.

Objectives. Since auto mechanics is a branch of power mechanics, the objectives are the same, but greater awareness, understanding, and skill should develop.

Content. The content which follows is not organized rigidly into courses. It is, however, outlined under three main headings, chassis, automobile engines, and auto electricity and tune-up which could be covered in a full year course or become the titles of semester length or full year courses. A number of satisfactory arrangements may be developed. This material is presented as a guide only. How this or other information is presented is the responsibility of the individual instructor working within the limitations of available time and facilities.

Chassis

I. Brakes

A. The principles of braking
   1. Friction
   2. Types and history of brakes

B. Hydraulics — principles and function of parts

C. Types of brake action
   1. Single anchor
   2. Double anchor
   3. Double anchor, double cylinder brake
   4. Self-energizing brake shoe
   5. Servo-action
   6. Caliper-action

D. Servicing brakes
   1. Turning drums
   2. Arcing shoes
   3. Resurfacing discs
   4. Replacement of cylinder kits

P

16797

E. Adjustment
   1. Adjusting shoes, manual, and self-adjusting
   2. Adjusting front bearings
   3. Bleeding brake lines
   4. Adjusting mechanical linkage

F. Special braking devices
   1. Power brakes
   2. Anti-roll device
   3. Emergency brakes
   4. Brake lights

II. Suspension

A. Importance of alignment

B. Types of suspension systems
   1. Leaf springs
   2. Coil springs
   3. Torsion bar springs
   4. Air springs
   5. Solid axle suspension
   6. Independent suspension

C. Geometry of the suspension system
   1. Caster — definition, function, and adjustment
   2. Camber — definition, function, and adjustment
   3. Toe-in and toe-out — definition, function, and adjustment
   4. Kingpin or steering axis inclination — definition and function
   5. Turning radius and slip angle

D. Steering linkage
   1. Inspect and adjust steering gear box
   2. Inspect and adjust steering linkage (Pitman arm, idler arm, center link, tie rod)

E. Alignment

III. Drive line

A. Universal joints

B. Propeller shaft

IV. Transmission

A. Conventional
   1. 3-speed
   2. 4-speed
   3. Other

B. Overdrive

C. Automatic
   1. Basic structure
   2. Fundamentals of operation
      a. Couplings
      b. Converters
      c. Planetary units
   3. Control systems
   4. Service operations

V. Differential

A. Conventional
   1. Operation
   2. Adjustment
   3. Repair

B. Limited slip
   1. Operation
   2. Adjustment
   3. Repair

Automobile Engine

I. Review of fundamentals

A. 4-stroke cycle

B. Engine measurement
   1. Bore and stroke
   2. Piston displacement
   3. Compression ratio
   4. Brake horsepower
   5. Torque
   6. Volumetric efficiency

II. Introduction

A. Fuel system

B. Electrical system

C. Cooling system

D. Lubricating system

E. New tools and equipment

III. Engine overhaul procedure

A. Diagnose engine troubles

16798

B. Follow logical order for disassembly

C. Observe defects

D. Measure clearance

E. Make use of manuals

IV. Engine systems

A. Intake and exhaust

B. Cooling

C. Lubrication

D. Valves

E. Pistons

Timing an engine.

Auto Electricity and Tune-up

I. Electrical fundamentals

A. Electricity

B. Magnetism

C. Induction

II. Storage batteries

A. Construction

B. Operation

C. Service

III. Ignition systems

A. Coils

B. Distributors
1. Advance mechanisms
2. Primary circuit
3. Secondary circuit

C. Resistors

Assignment

WS. 43-50 Make an isometric drawing of each object shown on Illustration Sheets 22 and 23, pages 79, and 81. Draw one object on each Work Sheet. In order to center the objects on your Work Sheets, it will be necessary to follow this procedure:

1. Draw only the outline of the object on a piece of practice paper to obtain overall dimensions.
2. Locate isometric axis on Work Sheet so object being drawn will be centered on drawing.

WS. 43. Vise Block.

WS. 44. Step.

WS. 45. Enclosed Step.

WS. 46. Angle Slot.

WS. 47. Gable.

WS. 48. V. Block.

WS. 49. Wedge.

WS. 50. Centering Block.

WS. 51-54 Make an oblique drawing of each object shown on Illustration Sheet 24, page 83. Draw one object on each Work Sheet. In order to center the objects on your Work Sheets it will be necessary for you to follow the procedure given for isometric drawings.

WS. 51. Step Block.

WS. 52. H Block.

WS. 53. Slide Block.

WS. 54. Dovetail.

Transparencies

The following is a list of companies that are producing transparencies. They should be contacted directly to obtain a complete list of such materials.

TOOLS AND EQUIPMENT

The following list is presented as a guide in the selection of tools and equipment needed to teach power. The approximate number of each item needed for a small, medium, or large number of students in unit shop for power is indicated as well as items needed to equip a power area of a general shop.

16801

Basic Tools and Equipment for the Power Area of a General Shop

	No. Needed
Tool kits (1 kit for every 3 students)	
Combination wrench set $\frac{1}{4}$" to 1"	13 pieces
Screw driver set	5
Putty knife	1
Combination needle nose pliers and side cutters	1
$\frac{3}{8}$" socket set including:	
Ratchet	1
Extensions, 12", 7", 3"	3
Speed handle	1
Universal joint	1
Sockets $\frac{5}{16}$" to $\frac{7}{8}$"	10
Spark plug socket $\frac{13}{16}$"	1
Hammer, ballpeen 12 oz.	1
Hammer, soft face	1
Cabinet	1
Spark plug cleaner and tester	1
Coil condenser tester	1
Grinder (pedestal)	1
Valve and valve seat refacer	1
Valve and lapping device	1
Ring compressor 1" - 3"	1
Ring remover	1
Universal puller set and bushing removers	1
Manufacturers manuals (assorted)	
Flip charts (set)	1
Engines (1 cylinder, 4-stroke)	4
Demonstration equipment (models, mock-ups)	
Benches	4
Tool, equipment supply storage	
Vises	4
Parts cleaner	1
Compressed air service	
Gasoline cans (safety) 2 gal.	1
Can with pouring spout 3 gal.	1
Oil cans	2
Funnel, small	1
Funnel, medium	1
Oily waste cans	2
Fire extinguishers	1
Demonstration bench	1
Chalk board	1
Chairs	8
Soldering coppers (electrical)	1
Micrometer 0-1", 0-2", 0-3"	1 ea.
Feeler gauges (set .001-.030)	1

	Class Size		
	Small (8)	Medium (12)	Large (16)
Feeler gauges	1	2	2
Spark plug gap gauge	1	1	1
Dial indicator	1	1	1
Set small hold gauges $\frac{1}{8}$" - $\frac{1}{2}$"	1	1	1
Set telescope gauges $\frac{1}{2}$" - 2"	1	1	1
Tape measure 6"	1	1	1

Basic Tools and Equipment for the Power Unit Shop

Power mechanics

Tool kits (1 kit for every 3 students)

WOODWORKING

FINISHING

SKILLS

PLANNING & DESIGN

TECHNOLOGY

160/161
16806

One of our greatest natural resources is wood, from which a host of wood products are derived. Today, with the new wood products being produced, additional knowledge and skills must also be developed.

A relatively small percentage of our students will be employed in the wood industries, but all will be consumers, wage earners, and many will be home owners. A knowledge of wood and wood products is needed.

This area lends itself to certain construction activities with simple hand tools at the elementary school level. Tools are readily available and relatively inexpensive. The availability of free or inexpensive materials also encourages the use of construction activities at the elementary school level. If facilities permit, individually-made, take-home projects can be produced, but the thrust of industrial arts at this level is generally toward activities that result in the construction of a device or object that enriches or motivates interest in some phase of classroom instruction.

Woodworking is an important area in the junior high industrial arts program. Here, students should acquire skill and knowledge in the basic processes and uses of wood. They should learn about industrial applications of wood processes and develop an appreciation of safe practices in woodworking. An understanding of some of the occupational opportunities and requirements for employment in the wood industries is also important. They should catch a glimpse of the exciting activity that can be pursued if they elect to take additional work in this area in senior high school.

Basic concepts of industrial arts should be a part of elementary teacher training.

At least two years of sequential course work in woodworking should be available in the senior high school. Semester length courses in certain areas such as machine woodworking, wood finishing, upholstery, wood turning, pattern making, and boat building could be offered or certain of these areas could be combined or arranged to make up two or more full-year courses. Equipment and facilities adequate for some specialization must be provided. Course work at this level, despite the high degree of proficiency attained by some students, should not be considered as training for earning a wage.

Woodworking presents some opportunity for the application of mathematical and scientific principles and certain other aspects of general education. Safety instruction is essential to this area, and special emphasis should be placed on developing an understanding of what constitutes safe working conditions. Likewise, the development of good safety habits should be stressed. Students should be encouraged to develop original designs or modify existing designs as they undertake project work of a traditional nature. Mass production work, special investigation of a technical nature, experimentation, and other newer approaches may be utilized to good advantage in this important area.

Woodworking for Junior High Schools (7-9)

One of the industrial arts courses most commonly offered in school shops across the nation, and in Iowa as well, is that of woodworking. It is most appropriate to offer some instruction in this area at the junior high school level. Students have sufficient physical maturity to use junior sizes, or even some standard sizes, of common woodworking tools with substantial success. Students enjoy working in this area and they often come to it with strong interests, needs, and somewhat unrealistic goals. The first course should capitalize on such enthusiasm and provide the opportunity for students to learn basic concepts related to woodworking; and to develop good work habits and a degree of skill in using common woodworking tools and certain machines.

A minimum of 25 periods (5 weeks) of instruction in this area should be presented at this level. If time permits, as many as 105 periods (21 weeks) or

W

16807

more could be spent profitably in woodworking at the junior high level.

Objectives. Every student should have the opportunity:

- To explore the area of woodworking and the related information about industries dependent upon wood and its uses.
- To develop skills in handling tools, wood, and wood-related products.
- To develop appreciation of good craftsmanship in design and construction of wood products.
- To develop cooperation, communication, and responsibilities towards others while working with others.
- To discover aptitude and interest in woods and woodworking.
- To develop the ability to make better selections of wood products.
- To develop careful planning procedures and safe work habits in wood construction.

Content. The following outline includes content which would be appropriate to teach in junior high school course work in wood. Woodworking must be a sequential process leading from the simplest to the more advanced techniques. The junior high program is an introduction into various woodworking units. Many of the units covered must be expanded and continued in later woodworking courses.

The following is a guide on which to build a program suited to each individual situation. No attempt has been made to identify specific courses. The material here may be organized into one or more courses depending on local scheduling arrangements. Appropriate student activities are available in textbooks and professional journals, but some are included here. These are illustrated for quick reference.

I. Introduction

- A. Objectives
- B. History
- C. Nature of wood and woodworking
- D. What is expected of students
- E. Career opportunities

II. Drawing and planning

- A. Kinds of drawings
  1. Sketches
  2. Working drawings
- B. Bill of materials
- C. Estimating costs of woodworking materials
- D. Purchasing and ordering lumber
- E. Order of procedure
- F. Sources of materials

III. Design

- A. Styles of furniture
- B. Function
- C. Designing procedures
- D. Materials
- E. Construction
- F. Appearance

IV. Wood technology

- A. Nature of wood
  1. Composition and chemistry
  2. How it grows
- B. Lumbering
  1. Forests
  2. Conservation
  3. Saw mills
  4. Seasoning
- C. Kinds and classification
  1. Hardwoods and softwoods
  2. Common woods identification
  3. Characteristics
- D. Grading and dimensions
  1. Hardwood, softwood, plywoods

16808

2. Defects, enemies and moisture
3. Plywood and veneers
   a. Production
   b. Grades
   c. Uses
   d. Advantages
   e. Disadvantages
4. Lumber products
   a. Hardboard, particle board, laminates
   b. Production — uses

V. Safety

A. General rules

B. First aid

C. Organization of equipment

D. Cleanup

E. Specific tool and machine rules

VI. Hand tools

A. Importance of good tools

B. Measuring and layout

C. Squaring

D. Cutting

E. Scraping

F. Drilling and boring

G. Care and sharpening
   1. Edges and angles
   2. Grinding and honing

H. Adjustment and use

VII. Portable power tools

A. Drills
   1. Sizes ($\frac{1}{4}$", $\frac{3}{8}$", $\frac{1}{2}$")
   2. Speeds
      a. Constant
      b. Variable
      c. Reversible

B. Sanders
   1. Belt
   2. Orbital
   3. Straight line vibrator

C. Cutting
   1. Saber saw
   2. Circular saw

VIII. Non-portable power tools

A. Scroll saw

B. Band saw

C. Table saw

D. Radial saw

E. Lathe

F. Drill press

G. Jointer

IX. Construction

A. Joints and joining
   1. Butt
   2. Dado

W

16809

3. Rabbet
4. Miter
5. Lap

B. Adhesives
1. Kinds
2. Characteristics
3. Uses

C. Clamping
1. Types
a. Bar
b. Handscrew
c. Corner
2. Application and pressure

D. Abrasives
1. Kinds
2. Quality
3. Grit
4. Use

E. Fasteners
1. Types
2. Selection
3. Use

Surface preparation for wood finishing.

X. Wood finishing and refinishing

A. Preparing the surface

B. Staining

C. Fillers

D. Finishes

E. Application

Activities

- Experiment with finishes and application.

XI. Upholstery

A. Simple padding methods involving foam materials

B. Covering procedures

XII. Consumer knowledge

A. Manufacturer

B. Division of labor

Woodworking for Senior High Schools (10-12)

Industrial arts in the senior high school should be a continuation of the program started in the junior high. The students interested in this field should be able to continue through another two-year sequence. It is important that woodworking at this level not be confined to furniture building regardless of the high interest of students and esteem of school patrons in regard to such activity. Many experiments may be conducted, the structure of wood studied, texts and reference materials used, and shop activity should expose students to a number of kinds of woodworking activity in addition to furniture building.

Some schools have sought to strengthen their industrial arts programs by eliminating courses in this area at the senior high level. Admittedly, many Iowa schools have in the past emphasized woodworking to the near exclusion of other subject areas and to the detriment of their program. But to eliminate woodworking from the senior high school level does not necessarily strengthen the industrial arts program. It is required that programs include a number of challenging subject-matter areas, that traditional woodworking programs be improved and

16810

UNIT VII — ARCHITECTURAL DRAWING

General Information

An architect is a professional man who designs buildings, draws plans, and supervises the construction of a building. The architect must know the needs of the person for whom he is going to build. He must know the kind, size and style of house his client wants, as well as the amount of money his client has to spend. He then has to record this information in a "set" of plans so that the builder can build what his client desires.

An architect usually does not sell his plans and specifications of a building; he sells his services.

A number of drawings are necessary to complete a "set" of house plans. They should include; floor plan, basement or foundation plan, elevations, plot plan, and details as needed. Architectural drawings are usually drawn to scale with one foot on the building equal to one-fourth inch on the drawing. Thus $\frac{1}{4}$" = 1' - 0".

Illustration Sheet 26, page 91, shows the method an architect would use to block-in a floor plan.

Elevations of a building are merely finished drawings that provide outside views that show the general design of the building. They show the type, design, and location of windows and doors; the style of the roof, the kind of shingles used, the type of cornice used, and describe the exterior appearance of the building.

Illustration Sheet 28, page 95, shows a section through a

1678

up-dated, and that woodworking courses be permitted to make their legitimate contribution to the overall industrial arts program without encroaching on other areas that have equally important contributions to make.

Objectives. Every student should have the opportunity:

- To further develop background and information in relation to the industries of wood and wood products in this country.
- To further develop skills in handling tools and shaping wood and wood products.
- To develop appreciation of good design and craftsmanship.
- To continue the development of safe work habits.
- To improve the ability for intelligent selection and usage of wood products.
- To make and read working drawings.
- To further develop cooperation, communication, and responsibility to others when working in groups.

Content. The content which follows is not organized into courses, but there is more than enough content to permit the basis for several courses. All areas may be covered in a woodworking course which would build on experiences gained in the course work offered in this area at the junior high school level. This could be followed with semester length or full year courses in major areas. It is recognized that sequence of instruction and extent of student involvement may be modified by local conditions. The suggested content is presented as a guide only. How this or other information is presented is the responsibility of the individual instructor. Appropriate student activities for this area are readily available in textbooks and professional journals.

I. Introduction

A. Objectives

B. What is expected of the students

II. Drawing and planning

A. Reading and making blueprints

B. Geometric work

III. Shop math

A. Board measure

B. Fractions and decimal

C. Metric measurement

IV. Design

A. Styles

B. Principles and elements

C. Design evaluation

D. Color

V. Wood technology

A. Wood identification

B. Physical properties

C. Wood analysis
1. Composition
2. Chemistry
3. Moisture
4. Content
5. Shrinkage
6. Warpage

D. Wood preservation
1. Wood-destroying organisms and molds
2. Insect treatment
3. Fire treatment

E. Tree surgery

W

16811

VI. Occupational information

- A. Manufacturers
- B. Division of labor
- C. Employer-employee relations
- D. Unions
- E. Automation

VII. Safety

- A. General rules
- B. Specific

VIII. Review of hand tools

IX. Portable power tools

- A. Circular saw
- B. Sabre saw
- C. Reciprocating saw
- D. Router
- E. Plane

X. Non-portable power tools

- A. Table saw
- B. Radial arm saw
- C. Band saw
- D. Surfacer
- E. Jointer
- F. Router
- G. Shaper
- H. Lathe
- I. Mortiser
- J. Drill press
- K. Scroll saw
- L. Belt sander
- M. Disc sander
- N. Disc cutter head jointer (uniplane)

Duplicate wood turning.

16812

XI. Construction

A. Joints and joining
   1. Dowel
   2. Mortise and tenon
   3. Tongue and groove
   4. Dovetail

B. Adhesives
   1. Natural and synthetic
   2. Pressures
   3. Temperature
   4. Electronic gluing
   5. High frequency gluing

C. Clamping
   1. Belt clamps
   2. Specialty clamps

D. Abrasives
   1. Natural and artificial
   2. Grit and procedure

E. Fasteners and plugs

F. Edge treatment

G. Drawer construction

H. Door construction

I. Inlays and overlays

XII. Wood finishing and refinishing

A. Preparing the surface

B. Stains and bleaches

C. Fillers
   1. Paste
   2. Stick

D. Finishes
   1. Hot lacquers
   2. Polyurethane, epoxy, and polyester resin

E. Application

F. Touch-up

Activities

- Touch up a mar on finished furniture.
- Experiment with types and applications.

XIII. Upholstery

XIV. Hardware

A. Hinges

B. Pulls

C. Catches

D. Casters and glides

E. Locks

XV. Special products

A. Plastic laminates

B. Hardboard

C. Particle board

D. Compreg

E. Impreg

F. Tile

G. Upholstering

Activities

- Apply plastic laminate to a table top and trim the edges.

TOOLS AND EQUIPMENT

The following list is presented as a guide in the selection of tools and equipment needed to teach woodworking. The approximate number of each item needed for a small, medium, or large number of students in a unit shop in woodworking is indicated. The list is set up on a unit shop basis. If the woodworking area of a general shop is to be set up some of the items could be reduced to about one-quarter or one-third of the numbers listed.

	Class Size		
	Small (10)	Medium (16)	Large (20)
Machines and Benches			
Air compressor	1	1	1
Band saw 16" or larger, complete with motor and enclosed stand	1	1	1
Bench, gluing bench or table, clamp storage below	1	1	1
Bench, wood finishing, steel, cabinet	1	1	1
Benches, woodworking, maple top, complete with vises, student storage lockers, or drawers in base	3	4	5
Drill press, floor model complete with motor mortising attachments and ½" Jacobs chuck	1	1	1
Grinder, pedestal type, with safety flanges and eye shields, with 1 wheel dresser	1	1	1

16816

	Class Size Small (10)	Medium (16)	Large (20)
Electric hand drill $\frac{3}{8}$" chuck, variable speed	1	1	1
Electric hand drill $\frac{1}{2}$" reversible	1	1	1
Electric hand sabre saw	1	1	1
Jig saw, direct motor or belt driven, complete	1	1	1
Jointer 6" or 8", table fitted for rabbeting. Safety cylinder type, complete with guard and motor	1	1	1
Lathe, wood turning, complete with motor switch, tool rest, centers, and face	2	2	3
Mortiser	1	1	1
Portable power hand saw	1	1	1
Portable power plane	1	1	1
Radial arm saw 9" or larger, complete	1	1	1
Reciprocating or bayonet saw	1	1	1
Router-shaper with cutters, dovetail attachments, and laminate cutting attachments	1	1	1
Sander, combination disk and belt sander with *dust collector*	1	1	1
Sander, belt, portable with dust bag	1	1	1
Sander, finishing orbit, inline portable	1	2	3
Spray gun, complete with hose, nozzles, and air compressor	1	1	1
Spindle shaper	1	1	1
Surfacer with unit dust collector system		1	1
Table saw, 10", tilting arbor complete with motor, guard, fences, and blades	1	1	1
Tool sharpener — slow speed with grinding attachments	1	1	1
Vacuum cleaner, industrial type	1	1	1
Tool panel	1	1	1
Tool panel for accessories	1	1	1

Tools	Class Size Small (10)	Medium (16)	Large (20)
Awl, brad	1	2	2
Bevel, sliding-T	1	2	2

ABSTRACT - Prepared by the Department of Education in Ottawa, Canada, this publication is a program guide for Industrial Physics in Grades 11 and 12. The material is based upon 10 periods per week, a total of 150 periods, plus or minus 20 percent. Specific objectives are to: (1) convey clearly some fundamental principles of physics, (2) encourage creative expression within the medium of science and technology, (3) achieve a basic competence in certain technical areas of employment, and (4) acquaint the student with the sociological implications and effects of technology. The contents are organized into four divisions: (1) Mechanics and Materials, (2) Fluids, (3) Instrumentation, and (4) Electricity, with each division sub-divided into separate units. A curriculum guide will be published at a later date. (GEB)

VT 013 068

16820

typical frame wall. Some details have been omitted for simplification, for example, wall sections are usually drawn to show a window. However, you will study the parts of a window in a later Work Sheet.

Illustration Sheet 29, page 97, shows a half-exterior view and a half-interior view of a two sash window commonly called a double hung window and designated on plans and elevations as a "DH" window. The frame which holds the glass is called the sash. If the glass is undivided, it is called a single light sash. If the glass in the upper sash consists of more than one light, it is called a "divided light". Division bars are called "muntins" or "mullions".

Each sash is counter-balanced by two iron weights attached to the sash by a sash cord.

Outside doors are made in many styles to harmonize with the style of the house where they are used. The width of standard doors varies from 2' -0" to 3' -6" and are from 6' -8" to 7' -0" in height. A front door is usually larger and heavier than an inside door. Some outside doors have four panels placed vertically or horizontally. Others have the upper part glass and the lower part panelled while still others have one big glass and no panels. These and other styles are listed and illustrated in the catalogs issued to architects and builders by the sash and door companies.

FOREWORD

This publication is a major revision of the Five-year Industrial Physics Course as outlined in Curriculum R.P.27. The span of subject content has been reduced considerably, and one new area, Instrumentation, introduced. As organized in its present form, the outline overlaps Grade 11 Physics, Curriculum S.17A, 1966, to a minor extent.

Industrial Physics is primarily concerned with physical principles as applied in industry. If students are to develop their understanding, they need "hands-on" experience with equipment that embodies these principles. If the emphasis is properly placed, the opportunity to work with suitable hardware will greatly enhance the students' ability to grasp underlying concepts.

Students of Industrial Physics will have considerable time available for laboratory activity. This is made possible by the scheduling of 10 periods per week in addition to the regular science periods in Grades 11 and 12.

The course has four Divisions: Mechanics and Materials, Fluids, Instrumentation, and Electricity. As such, it offers a broad look at industrial applications in these areas, and provides a good basis for further education in the theoretical and applied physical sciences. The teacher should stress the principles common to each Division. Students' useful knowledge and insight will grow when they note that the same concepts and laws are repeated in the various subject areas.

Based upon 10 periods per week, a total of 150 periods, plus or minus 20 per cent, is suggested for each Division. In addition to this flexibility, the teacher may omit the optional topics and substitute material which he deems more essential. As a guideline, estimated periods have been assigned to each unit, the letter "T" being used to indicate teaching periods and the letters "S.A.", student activity.

The teacher of Industrial Physics must have a genuine appreciation of applied physics. Industrial experience, as an engineer or senior technologist, is vital. Only a person with such a background can convey the excitement and power of creative technology to his students.

Instruction pertaining to Division Four will normally be given by the teachers of Electricity or Electronics in their shops. It is possible, however, that the teacher of Industrial Physics may be required to teach the whole course. Whatever the arrangement, Electricity should integrate with the other Divisions.

Since the Course is a two-year entity covering both Grades 11 and 12, the teachers must decide the extent to which any Unit will be studied in either grade. They must also determine the weekly and monthly sequence of topics because the Outline does not include any suggestion of optimum organization. Certainly any mechanical use of the material will result in a poor presentation.

A Curriculum Guide will be published shortly. It will expand the Outline in considerable detail.

OBJECTIVES

- To convey clearly many of the fundamental principles of physics.
- To provide a familiarity with some of the industrial applications of physical principles.
- To stimulate curiosity in the realm of science and technology.
- To serve as preparation for further education, particularly in the physical sciences.
- To encourage creative expression within the medium of science and technology.
- To develop problem-solving ability by means of exercises dealing with realistic problems of a technological nature.
- To instil a degree of confidence in the ability to comprehend, and work with complex industrial machines and processes.
- To teach some laboratory methods and techniques.
- To achieve a basic competence in certain technical areas of employment.
- To provide an overview of Canadian industry in order to make possible a selective orientation to the various areas of opportunity in technology.
- To acquaint the student with the sociological implications and effects of technology.

DIVISION 2: FLUIDS

INTRODUCTION

Although energy transmission by means of a fluid medium is an old concept, many new specific applications are being employed in automated processes. The development of fluid logic apparatus promises to give further impetus to the fluid applications, since these components are easy to manufacture and trouble free in operation.

This Division is not meant to be an extensive fluid power study. It is hoped that the study of fluid properties will be channeled toward application rather than the reverse; for instance, the differing response rates for hydraulic and pneumatic systems should be explained on the basis of differing physical properties of oil and air, respectively.

The question of whether to teach pneumatics or hydraulics first is still not resolved. The teacher is free to start with pneumatics if he so wishes. If he chooses the other presentation order, he should spend a greater amount of time on pneumatics than suggested in the course of study. Once the fundamentals of pneumatics have been mastered, a correspondingly shorter time period needs to be spent on hydraulics.

Hydraulic pumps and motors, as well as air compressors, should not receive exhaustive treatment. In each case, one or two frequently occurring types should be examined carefully and reference to other types limited to operating principle only. In general, emphasis should be concentrated on efficiency of energy conversion rather than specific design features.

The use of high supply pressure is to be avoided. Hydraulic and pneumatic supply pressures less than 100 psi are quite enough for demonstration and experimentation in the laboratory, as brute force application is not being investigated.

The teacher is asked to make cross-reference to phenomena which occur in this Division but which have either direct application or analogy in other areas of study; for example, the one-way valve is the counterpart of the electrical diode since it allows only unidirectional flow. Through such cross-references the student will gain a knowledge and respect for the fundamental principles which govern our universe

DIVISION 3: INSTRUMENTATION

INTRODUCTION

This Division includes the study of instrumentation in order to meet industry's increasing demands for personnel with a knowledge of industrial process control fundamentals. Since secondary schools offer very few courses in this field, most students are unaware of its opportunities.

The term "instrumentation" has a broad association within industry. In this course, its meaning is narrowed to include the measurement and control of flow, level, temperature and pressure as well as gas chromatography, spectrophotometry and ph analysis procedures.

In harmony with the aims of Industrial Physics, the teacher should try to give the student a clear understanding of fundamental principles rather than an extensive knowledge of specialized calibration procedures. Once he has mastered fundamental principles, the student will be able to extend his knowledge to more specialized manual applications. Hardware should thus be examined from a first principle basis with less emphasis on specific design characteristics.

Whenever possible, the student should concentrate on the numerous applications of control apparatus which can be found in his domestic environment. The automatic electric water heater is an excellent example of a closed loop temperature control system. The water closet is an example of a simple level sensing and control system.

Proportional control should be treated carefully. A superficial approach can do little to benefit the student whereas an in-depth study is above the Grade 11 and 12 level.

The teacher should not overlook the opportunity to refer to the extremely broad significance of basic principles. The concept of a time constant is associated with electronic circuits even though a thermometer exposed to a change of temperature exhibits the phenomena. Amplification, also a term usually associated with the field of electronics, also, interestingly, applies to pneumatic signal transmission devices.

In some areas of the province, there may be a local need for a more detailed coverage of this Division. Where this is the case, the teacher should make use of the time flexibility built into the Industrial Physics Course and expand the treatment of the Division accordingly.

DIVISION 4: ELECTRICITY

INTRODUCTION

Although this Division will normally be taught by teachers of Electricity and Electronics, it should be considered as an integral part of Industrial Physics. The participating teachers should coordinate their instruction so that the work done in Electricity supplements and reinforces the principles taught in the other Divisions.

Many concepts and principles appear in more than one Division; for example, conductivity, conservation of energy, vectors, power, sensitivity, amplification, feedback and time constants occur in Division 4 and elsewhere. These and other concepts can be clearly conveyed to the student if the teachers try to show interrelationships between subject areas. Indeed, the basic aim of the course is only achieved if the students are able to see the repeated applicability of basic physical principles.

Unit 4.1 should be presented with particular care and thoroughness. The students must obtain a good grounding in electron phenomena and circuit analysis. The teachers of Electricity and Industrial Physics should agree on basic definitions, units and terminology.

The material in this Division is not arranged in a teaching sequence: it is an analysis of the subject matter, to be used as the teacher sees fit. Having introduced a topic from Unit 4.1, he may move to a related application referred to in another unit; or, he may discuss the properties of resistance, capacitance and inductance as part of the study of components (Unit 4.2) and then proceed to alternating current circuits (Unit 4.1). An infinite series of sequences are possible: the teacher should select those that appear to be logical and interesting.

Due to the limited time available, many legitimate topics have been omitted from the Outline. The teacher may wish to replace some of the optional topics with material that he considers more essential. Whatever the selected content, he should be keenly aware that the object of Industrial Physics is to convey basic concepts with the aid of suitable hardware: laboratory equipment is a means to an end, not an end in itself.

UNIT 4.1

FUNDAMENTALS OF ELECTRICITY AND MAGNETISM
38P

Electron Phenomena
Electron theory
Electrical charges
Electrostatic fields
Electrical potential

D. C. Circuits
Electrical conductors and insulators
Circuit analysis: Ohms Law, Kirchhoff's Laws

ABSTRACT - Developed by the Bureau of Secondary Curriculum Development of the New York State Education Department, this teaching guide is for teacher use in building a course of study in drafting. The material is designed for use over a 2-year period, each consisting of 175 teaching days of 135 minutes per day. Objectives include the development of skills and techniques, acquaintance with systems and procedures related to draftsman's functions, and the development of habits of independent and methodical procedure in the production of drawings. The course is divided into two major units, with each unit divided into 14 sections. Each section contains objectives, a suggested time, and suggested topics. A bibliography, supplies and equipment list, visual source directory, and a visuals list are included. (GEB)

FOREWORD

The recent increase in the number of courses in mechanical trade drafting has created a need for the first State syllabus in this subject.

In the summer of 1969, David Jones of Allegany County BOCES, and Samuel Yaslow of New York City's Alexander Hamilton Vocational-Technical High School, assisted by Harold Wassmer, Associate in Trade and Technical Education, produced a topical outline of course content. During the following summer a committee composed of Mr. Jones, John Hoglund of Suffolk County BOCES #3, William Linton of Trott Vocational High School, Niagara Falls, and Joseph Svoboda of Broome-Tioga BOCES, met with Mr. Wassmer, and Joseph Messier, Associate in Vocational Curriculum, to organize the topical outline into a mechanical trade drafting syllabus.

The nature of the course content, and the advice of industrial contacts assisting in its organization, indicate a need for establishment of student qualifications for admission to a trade drafting course. These prospective employers firmly believe that success in the field demands not only a working knowledge of the graphic language and industrial technologies, but also an ability to apply basic algebra, geometry, and the natural trigonometric functions. This syllabus should, then, be of interest to guidance personnel as well as drafting instructors and administrators of occupational education.

Gordon E. Van Hooft
Chief, Bureau of Secondary Curriculum Development

William E. Young
Director, Curriculum Development Center

16838

TO THE TEACHER

This syllabus in mechanical trade drafting is organized on the basis of a 2-year course, each year consisting of 175 teaching days, of 135 minutes per day.

Like all syllabuses, the subject content is the acceptable minimum, organized in some logical sequence. The teacher must, therefore, use the syllabus as a basis on which to build his own course of study, arranging the included subject matter and adding appropriate content to reflect local conditions.

Each unit of study contains objectives and a suggested allotment of total course time. The objectives are stated behaviorally for, of course, the student's ability to function to entry-level industrial standards in an industrial situation is the true criterion of successful trade education. The time to be devoted to each unit is suggested only as a guide, for various local factors will necessitate modification of these allocations. Suggestions for teaching, and for limiting the required learning to entry-level, appear at intervals to the right of the course content.

At the end of the syllabus is a resource list and a list of equipment suggested for updating or establishing an industrially oriented trade drafting program. The equipment list is formulated on the basis of a 20 student class unit.

Berton P. Plummer
Chief, Bureau of Trade and Technical Education

Robert H. Bielefeld
Director, Division of Occupational Education

NATIONAL BUREAU OF STANDARDS-1963-A

GENERAL OBJECTIVES

To aid the student to—

Develop skills and techniques necessary to performance of required manipulative operations;

Become acquainted with systems and procedures related to the draftsman's function;

Become capable of exercising initiative in the use of standard reference and auxiliary sources of materials information;

Develop habits of independent and methodical procedure in the production of drawings;

Appreciate the importance of accuracy compatible to industrial standards in applied mathematics and the production of drawings; and

Appreciate the importance of the individual draftsman's contribution to the success of a group effort.

16841

/Unit I-1: INTRODUCTION TO DRAFTING DEPARTMENT PRACTICES

The student should be aware of the skills and knowledge required for successful employment as an entry-level draftsman.

The student should be acquainted with the duties of the various drafting job levels, and with their interrelationship.

The student should be aware of the opportunities for advancement, and with the procedures for advancing through the sequence of department job levels.

The student should be familiar with standard drafting procedures in the progress from basic idea to final approved drawing.

SUGGESTED TIME: 2 DAYS

A. DEPARTMENTAL ORGANIZATION
- Job levels
  - Tracer
  - Junior draftsman
  - Draftsman
  - Senior draftsman
  - Checker
  - Design draftsman
  - Designer
  - Senior designer
  - Engineering designer

This unit should be presented as the initial lessons in the course. The student should not, however, be required to memorize the information since this learning should take place throughout the course on a basis of daily experience.

B. DUTIES AND RESPONSIBILITIES
- Fully understand drafting terminology
- Skilled in drafting techniques
- Neat in application of drafting techniques
- Accurate in applying drafting mathematics
- Acquainted with manufacturing and assembling operations
- Familiar with United States of America, Standards Institute, Manual Y14
- Familiar with use of vendor catalogs

C. ROUTING OF DRAWINGS
- Design sketches
- Preliminary layouts
- Models, mock-ups, prototypes
- Finalization of design

/Unit I-2: DRAFTING SUPPLIES, INSTRUMENTS, AND EQUIPMENT

The student should be able to identify and select from the department's supply, any teacher-specified basic drafting tool or material.

The student should be able to describe the purpose of the various basic equipment and materials used in the production of drawings.

16842

SUGGESTED TIME: 3 DAYS

A. DRAFTING SUPPLIES
- Pencils
  - Graphite
  - Plastic
- Leads
  - Graphite
  - Plastic
- Sharpeners
- Media
  - Vellum
  - Cloth
  - Plastic film
- Erasers
- Erasing shields
- Drafting tape

B. INSTRUMENTS
- T-Square
- Parallel straight edge
- Drawing board
- Triangles
- Scales
- Compass
- Divider
- Irregular curve
- Templates
- Protractor

Excellent filmstrip sets on the nomenclature and uses of scales, and of compasses and bow instruments are available from commercial suppliers.

C. MAJOR EQUIPMENT
- Drafting table
- Light table
- Layout board
- Drafting machine
- Storage file
- Whiteprinting unit

/Unit I-3: FREEHAND SKETCHING

The student should be able to identify by name, the various types of lines used in rough drawings.

The student should be able to demonstrate by any teacher-specified means, a knowledge of the basic characteristics of pictorial and orthographic drawing.

The student should be able to select equipment and prepare a rough drawing necessary to express a basic idea or to plan a method of approach to a finished drawing.

16843

SUGGESTED TIME: 7 DAYS

A. ELEMENTS
- Line segment
- Angles
- Curves
- Irregular curves
- Combinations

B. TYPES
- Pictorial
- Orthographic

Both filmstrip sets and prepared transparencies are available from several commercial suppliers.

C. INTERPRETATION
- Orthographic to pictorial

D. USE OF GRIDS
- Isometric
- Orthographic
- Proportional
  - Reduce
  - Enlarge

The student should be aware of the existence of this procedure, but proficiency in use is beyond the scope of this course.

/Unit I-4: ORTHOGRAPHIC PROJECTION

The student should be able to demonstrate by any teacher-specified means, an awareness of the principles of third angle projection.

The student should be able to prepare an orthographic drawing using personally selected equipment and teacher-supplied information of any standard type.

SUGGESTED TIME: 15 DAYS

A. VIEWS
- Relationship
- Selection
- Placement

At this stage, student proficiency should be judged on proper use of orthographic principles rather than on quality of workmanship.

B. SOURCE OF INFORMATION
- Measured object
- Pictorial drawing
- Specifications; written or oral
- Rough sketch
- Assembly drawing
- Layout

/Unit I-5: GEOMETRIC CONSTRUCTIONS

The student should be sufficiently acquainted with the principles of plane geometry to readily identify pertinent shapes.

16844

The student should be able to draw lines in specific relationship to form any teacher-specified geometric shapes, using teacher-specified drafting instruments.

SUGGESTED TIME: 3 DAYS

A. POINTS

B. LINES

C. ANGLES

D. POLYGONS

E. TANGENTS TO ARCS AND LINES

F. TANGENTS TO ARCS AND ARCS

G. ELLIPSES

The teacher should be prepared to aid student recall of geometric principles.

Basic shapes should always be drawn as parts of actual objects — never as a shape only!

Transparency sets on graphic solutions are available from several commercial suppliers.

/Unit I-6: SECTIONS

The student should be able to demonstrate by any teacher-specified means, an awareness of the reasons for sectioning, and of the basic procedures in interpreting and making section drawings.

The student should be able to identify and interpret sectioning symbols.

The student should be able to demonstrate the ability to use section drawings to simplify interpretation of complex internal detail.

The student should be able to demonstrate by any teacher-specified means, the ability to apply the type section required for a specific part drawing.

SUGGESTED TIME: 15 DAYS

A. CUTTING PLANE LINE

B. SECTION LINE

C. TYPES
- Full
- Half
- Partial views
- Revolved
- Removed
- Broken out
- Offset
- Isometric
- Assembly
- Aligned

The teacher's discretion will determine which symbols the student must <u>know</u> — and which he must only know where to <u>find</u>.

Both filmstrip sets and prepared transparencies on sectional views are available from commercial suppliers.

16845

D. DEVIATION IN DRAWING PRACTICE
- Conventional breaks
- Runouts and filleted intersections
- Invisible lines
- Elements in section
  - Rib
  - Spoke
  - Web
  - Lug

/Unit I-7: AUXILIARY VIEWS

The student should be aware of the nature of auxiliary views, and acquainted with the conditions requiring their use.

The student should be able to draw the views required to define the true size and shape of inclined surfaces of an assigned part.

SUGGESTED TIME: 12 DAYS

A. PRIMARY
- Classification
  - Complete
  - Partial
  - Symmetrical
  - Curved line
- Methods of drawing
  - Projection
  - Reference line
    - Unilateral
    - Bilateral

B. SECONDARY

Note — Auxiliary views should be used only where no other method will show the true size and shape of those part surfaces inclined out of the vertical or horizontal planes.

Both filmstrip sets and prepared transparencies on auxiliary views and revolutions, and related constructions are commercially available.

The student should be aware of the existence of secondary views and acquainted with their nature, but at this level he should not be required to be proficient in their use.

/Unit I-8: PICTORIAL DRAWING

The student should be acquainted with the various types of pictorial drawing, and be aware of the circumstances under which they are used.

The student should be aware of the particular usefulness of exploded drawings.

The student should be able to make a pictorial drawing of any teacher-specified type, using personally selected instruments and equipment.

16846

SUGGESTED TIME: 12 DAYS

A. TYPES
- Axonometric
  - Isometric
  - Dimetric
  - Trimetric
- Perspective
- Oblique

The student should be aware of the existence of dimetric and trimetric drawing, but emphasis should be on proficiency in isometric drawing.

B. PROCEDURES
- Selection of plane
- Instruments
  - Templates
  - Technical fountain pens
- Pictorial plan dimensioning
- Exploded views

/Unit I-9: BASIC DRAFTING TECHNIQUES

The student should be acquainted with the characteristics of the various lines, and be aware of the necessity of conforming to standard use.

The student should be acquainted with the purpose and nature of title block information, and demonstrate an ability to complete the drawing format as required.

The student should be sufficiently acquainted with the concept of scale as a proportional enlargement or reduction, to enable interpretation and preparation of drawings.

The student should be acquainted with the various means and standards of lettering, and demonstrate proficiency in their use.

SUGGESTED TIME: 8 Days

A. ALPHABET OF LINES

B. SHEET SIZES —— U.S.A.S.

C. DRAWING FORMAT
- Title block
  - Drawing number block
    - Drawing number system
  - Drawing title
  - Corporate name
  - Original date of drawing
  - Signatures
  - Tolerance block
  - Scale block
  - Material specification

16847

- Security block
- Application block
- Border
- Zoning
- Revision block
- Material list/Parts list

D. SCALE
- Reduced
- Full
- Enlarged
- No scale

The teacher should be prepared to assist students in recalling use of scale.

E. LETTERING —— FREEHAND AND MECHANICAL
- Types
  - U.S.A.S.
  - Microfilm
- Procedures

Filmstrips on freehand lettering are available from several commercial suppliers.

/Unit I-10: MANUFACTURING PROCESSES

The student should be sufficiently acquainted with production processes to relate to the process in applying notes and specifications to the drawing.

The student should be acquainted with the sources of the technical information required for production process related drawings.

The student should be able to demonstrate by any teacher-selected means, an entry-level proficiency in selection and use of technical data in preparation of production process related drawings.

SUGGESTED TIME: 15 DAYS

A. SURFACE QUALITY
- Controlled symbol
- Noncontrolled symbol

Films on the drawing/production relationship are available from several commercial suppliers. Their use should be most advantageous.

B. CASTING
- Types
  - Sand mold casting
  - Investment casting
  - Centrifugal casting
  - Die casting
  - Plaster mold
  - Powder metallurgy
  - Injection molding

The student should be thoroughly acquainted with the process of sand mold casting. He need only be aware of the existence of other casting methods.

C. FORGING
- Types
  - Drop forging
  - Press forging

The student should be thoroughly acquainted with the process of drop forging. At this point, he

16848

- Rolling
- Upsetting
- Extruding

need only be aware of the existence of other forging methods.

D. STAMPING
- Operations
  - Blanking
  - Punching
  - Forming
  - Drawing
  - Trimming
  - Coining

The student should be thoroughly acquainted with the process of punching. He need only be aware of the existence of other stamping methods.

E. MACHINING
- Classification
  - Forming surface
  - Generating surface
- Factors
  - Greater accuracy
  - Surface quality
  - Adding features
- Items
  - Casting and forging
  - Standard stock
    - Sheet and plate
    - Bar
    - Shafting
    - Tubing
    - Structural shapes
  - Weldments

F. MACHINE TOOLS
- Engine lathe
  - Operations
    - Turning
    - Boring
    - Reaming
    - Facing
    - Threading
    - Knurling
- Drill presses
  - Types
    - Radial drill
    - Multiple spindle
  - Operations
    - Drill
    - Ream
    - Bore
    - Spotface
    - Countersink
    - Counterbore
- Milling machine
  - Types

Projection of U.S.O.E. films
#OE 68 - The Lathe, and
#OE 7 - Turning Work of Two Diameters
should be advantageous.

Projection of U.S.O.E. films
#OE 11 - The Milling Machine,

16849

FRONT ELEVATION

SCALE $\frac{1}{4}$" = 1'-0"

ILLUSTRATION SHEET NO. 27.

1682

- . Vertical
- . Horizontal
- Operations
  - . Cutting Keyways
  - . Hobbing
    - Gear teeth
    - Threads
    - Splines
  - . Reaming
  - . Boring
  - . Drilling
  - . Profiling
- o Broaching machine
  - Operations
    - . Holes
      - Circular
      - Square
      - Irregular
    - . Internal gear teeth
    - . Splines
    - . External contours
- o Grinding machine
  - Types
    - . Cylindrical
    - . Centerless
    - . Surface
- o Shaper
- o Planer
- o Lapping machine
- o Boring mill
  - Types
    - . Vertical
    - . Horizontal
- o Electric discharge machine

#OE 15 - Plain Indexing and Cutting a Spur Gear,
#OE 14 - Straddle Milling, and
#OE 12 - Cutting a Keyway,
should be advantageous.

At this point it is sufficient that the student be aware of the existence of shapers, planers, lapping machines, boring mills, and electric discharge machines.

/Unit I-11: SCREW THREADS AND FASTENERS

The student should be acquainted with the various means of either permanently or temporarily holding parts in position.

The student should be acquainted with the sources of technical data required for drawing threads and fasteners.

The student should be able to demonstrate an entry-level proficiency in selecting and using technical information necessary for drawing threads and fasteners.

SUGGESTED TIME: 17 DAYS

A. SCREW THREADS
- o Terminology
  - External thread

Prepared transparencies on bolts and screws are commercially available.

16850

- Internal thread
- Major diameter
- Pitch
- Lead; multiple-thread
- Right hand
- Left hand

o Profile; forms

o Unified National/American National

- Representation
- Series
- Class of fit
- Designation
  . External
    Nominal size
    Threads per inch
    Thread series
    Class of screw thread
    Hand
  . Internal
    Tap drill size
    Tap drill depth
    Thread specification
    Minimum tap depths
- Methods of production
  . Cutting
  . Rolling
  . Grinding
  . Molding

The student should not necessarily be required to demonstrate ability to draw all types of thread. Proficiency in selecting and using available data is required.

B. FASTENERS

o Bolts

- Type
- Series
- Designation
  . Complete
    Thread specifications
    Length
    Material
    Type of finish
    Type of head
    Name
  . Abbreviated

  - Designation
- Springs
  - Type
  - Designation

/Unit I-12: DIMENSIONING AND TOLERANCING

The student should be able to demonstrate by any teacher-selected means, a proficiency in measurement systems commensurate with entry-level drafting requirements.

The student should be able to demonstrate an ability to select a manner of representation of the feature dimensions and to place the information on the drawing.

The student should be aware of the necessity of maintaining size limitations, and be acquainted with the methods of stating the limitations on the drawing.

The student should be able to demonstrate an entry-level ability to prepare drawings, utilizing established methods of dimensioning and tolerancing.

16852

SUGGESTED TIME: 23 DAYS

A. GENERAL DIMENSIONS

- Units of measurement
  - Fractions
  - Decimals
  - Dual system; decimal/metric
  - Angular

The teacher should be prepared to aid the recall of fraction/decimal systems, as well as to teach the metric system.

- Arrangement
  - Aligned
  - Unidirectional
- Functional dimensioning
- Classification
  - Size
  - Location
    - Center-to-center
    - Coordinates
    - Finished surface to feature
- Reference dimensions
- Tabular dimensions
- Standard features
  - Cylinders
  - Arcs
  - Radii
  - Rounded ends
  - Irregular curves
  - Holes
  - Chamfers
  - Keyways
  - Keyseats
  - Tubing

Both filmstrip sets and prepared transparencies on dimensioning are commercially available.

B. APPLICATION OF TOLERANCES AND LIMITS

- Tolerancing methods
  - Limits
  - Plus and minus
- Effects of surface coatings
- Selective assembly

/Unit I-13: NOTES AND SPECIFICATIONS

The student should be acquainted with the various methods of designating materials.

The student should be sufficiently acquainted with basic metallurgy to relate treatments to materials.

The student should be sufficiently acquainted with manufacturing processes to correlate indicated operations to materials.

The student should be able to demonstrate entry-level proficiency in applying notes and specifications to drawings.

16853

SUGGESTED TIME: 10 DAYS

A. GENERAL NOTES
- Method of production
- Size and specification of materials
  - Metals
    - Cast iron
    - Hot rolled steel
    - Cold rolled steel
    - Tool steel
    - Copper
    - Brass
    - Bronze
    - Aluminum
  - Coding system for steel
    - AISI/SAE
    - ASTM
  - Nonmetals
    - Cork
    - Rubber
    - Ceramics
    - Plastics
    - Paper
    - Leather
- Heat treatments
  - Ferrous metals
    - Annealing
    - Normalizing
    - Tempering
    - Case hardening
  - Nonferrous metals
  - Hardness testing
    - Brinell
    - Rockwell
- Opposite hand parts
- Specification of tolerances
- Specification of surface quality
- Surface treatment
  - Electroplating
  - Metallizing
  - Hot dipping
  - Anodizing
  - Painting

B. LOCAL NOTES
- Leaders
- Types
  - Holes
  - Countersink
  - Counterbore
  - Spotface
  - Heat treat
  - Upset

16854

- Saw
- Chamfer
- Relieve
- Knurl
- Tap
- Taper

/Unit I-14: PRODUCTION DRAWING

The student should be sufficiently acquainted with the presented drafting "know-how" to demonstrate entry-level proficiency in the production of detail drawings.

SUGGESTED TIME 20 DAYS

A. SOURCE OF INFORMATION
- Sketch
- Specification
- Design layout
- Manufactured part

B. DESCRIPTION
- Size
- Shape
- Location of features
- Standard format
- Notes
- Symbols

C. TYPES
- Casting
- Forging
- Machining
- Stamping
- Welding
- Tabulated

D. FINAL OPERATIONS
- Checking system
- Checker changes
- Approval
- Release for production

E. REPRODUCTION
- Diazo
- Xerography
- Heat process
- Microfilming
  - Drafting standards
  - Aperture card
  - Blow back
  - Viewer

The student should be aware of the various methods of reproducing drawings but should not be required to understand the processes involved.

16855

/Unit II-1: ORIENTATION TO DRAFTING II

The student should be aware of changes in conditions in the drafting field.

The student should be acquainted with the scope of Drafting II, and with the course requirements.

SUGGESTED TIME 3 DAYS

A. SALARY AND BENEFITS

B. WORKING CONDITIONS

C. DRAFTING DEPARTMENT PRACTICES

D. COURSE DESCRIPTION AND REQUIREMENTS

/Unit II-2: INTERSECTIONS AND DEVELOPMENT

The student should be sufficiently acquainted with the principles of geometry to identify pertinent three-dimensional shapes.

The student should be sufficiently acquainted with the principles of mathematics to perform necessary calculations.

The student should be able to demonstrate entry-level proficiency in drawing the layout of intersections.

SUGGESTED TIME: 15 DAYS

A. SURFACES
- Plain
- Single curved
- Double curved
- Warped

B. PARALLEL LINES
- Prism
  - Regular
  - Right
  - Oblique
  - Truncated

C. RADIAL LINE
- Cylinders
  - Circular
  - Right
  - Oblique
  - Truncated

Both filmstrip sets and prepared transparencies on intersections, developments, and layout, are commercially available.

16856

- Pyramids
  - Regular
  - Right
  - Oblique
  - Triangular lateral surface
  - Regular polygon base
  - Truncated
  - Frustum

The student should be aware of the existence of methods of drawing pyramids, but proficiency therein is beyond the scope of this course.

- Cones
  - Right
  - Oblique
  - Truncated
  - Frustum
- Triangulation; transition piece
  - Oblique pyramids
  - Truncated solids
- Intersections
  - Straight lines
  - Curved lines
  - Auxiliary views

The student should be aware of the existence of triangulation procedure, but should not be expected to develop proficiency in use.

/Unit II-3: POWER TRANSMISSION

The student should be acquainted with the principles of mechanical power transmission.

The student should be able to demonstrate by any teacher-specified means, an ability to identify the various means of mechanically transmitting power.

The student should be able to prepare drawings of entry-level quality, using teacher-supplied information and personally selected standards, instruments, and equipment.

SUGGESTED TIME: 8 DAYS

A. GEARS
- Method of production
- Physical characteristics
  - Plain
  - Webbed
  - Spoked
- Types
  - Spur
    - Terminology and symbols
    - Pitch circle
    - Pitch diameter
    - Number of teeth
    - Diametral pitch
    - Circular pitch
    - Addendum

16857

- Dedendum
- Outside diameter
- Root diameter
- Whole depth
- Working depth
- Clearance
- Circular thickness
- Chordal thickness
- Chordal addendum
- Pressure angle
- Base circle
- Gear ratio
- Face of tooth
- Flank of tooth

- Forms of teeth
  - Composite
  - Involute
- Detail drawing; USAS-Y14.7
  - Tooth profile
    - Geometric construction
    - Template
  - Sectional view
  - Dimensioning
  - Tooth data
- Rack
  - Terminology and formula
  - Circular pitch
  - Working depth
  - Basic tooth thickness
  - Minimum dedendum
  - Addendum
  - Minimum clearance
  - Minimum total depth
  - Detail drawing; USAS-Y14.7
  - Tooth profile
  - Datum
  - Dimensioning
  - Tooth data
- Bevel gears; straight bevel, and spiral bevel
  - Terminology and symbols
  - Pitch diameter
  - Cone distance
  - Addendum
  - Dedendum
  - Addendum angle
  - Dedendum angle
  - Face angle
  - Root angle
  - Back angle
  - Outside diameter
  - Crown height
  - Backing
  - Crown backing
  - Mounting distance
  - Face width

The student should be acquainted with the use of the USAS-Y14.7 standards, but not necessarily proficient in use thereof.

16858

. Chordal addendum
. Detail drawing; USAS-Y14.7
. Single sectional view
. Dimensioning
. Tooth data

- Worm gears
  . Terminology and symbols ; Wheel
    Pitch diameter
    Whole depth
    Outside diameter
    Face length
  . Terminology and symbols; Worm Gear
    Pitch diameter
    Throat diameter
    Outside diameter
    Face radius
    Rim radius
    Face width
    Center distance
  . Detail working drawing; USAS-Y14.7
    Gear blank information
    Tooth cutting data
    Reference data, pertinent to mating part

B. CAMS
- Purpose
- Types
  - Plate/Radial
  - Cylindrical
- Types of motion
  - Uniform/constant velocity
  - Harmonic
  - Uniform accelerated/retarded
- Cam followers
  - Pointed
  - Roller
  - Flat faced
  - Spherical faced
- Displacement diagrams
  - Motion
  - Rise
  - Fall
- Plate cam profile
  - Follower on center
  - Pivoted follower
  - Offset follower
- Circular arc
- Cylindrical cam development

C. BEARINGS
- Classification
  - Thrust
  - Radial

16859

ILLUSTRATION SHEET NO. 28.

- Types
  - Sleeve
  - Ball
  - Roller
  - Thrust
  - Pillow block
- Selection
  - Load
  - Shaft fit
  - Housing fit

/Unit II-4: WELDING

The student should be acquainted with the basic processes used in the various types of welding.

The student should be acquainted with the American Welding Society manual of standard welding symbols.

The student should be able to demonstrate entry-level proficiency in selecting welding symbols, and in applying the symbols to the drawings.

SUGGESTED TIME: 10 DAYS

A. FUSION
- Oxyacetylene
- Metallic arc
- Atomic hydrogen
- TIG
- MIG
- Submerged arc

The student should be well acquainted with the nature of, and basic procedures involved in, the various common types of welding.

B. RESISTANCE
- Spot
- Projection
- Seam
- Butt
- Flash

Films on welding, and on designing for welding, are commercially available.

C. BASIC SYMBOLS —— AWS STANDARD
- Fillet
- Bevel
- Plug
- Square
- Butt
- Spot
- Flair
- Surfacing

D. ELEMENTS OF WELDING SYMBOLS
- Reference line
- Connecting arrow

16860

- Basic symbol
  - Near side
  - Far side
  - Combination
- Contour symbol
  - Flush
  - Convex
  - Finish symbol
  - Tail
  - Specification of reference
  - Length of weld
  - Skip weld; pitch
  - Root opening
  - Number of spots/projections
  - Supplementary information
    - Weld all around
    - Field weld
    - Method of obtaining contour

/Unit II-5: PIPING

The student should be aware of the uses of pipe assemblies, and acquainted with piping materials and the processes of assembling pipe systems.

The student should be acquainted with the standard piping symbols of the USAS-Y14 manual.

The student should be able to demonstrate entry-level proficiency in production of pipe drawings.

SUGGESTED TIME: 12 DAYS

A. PIPE
- Material
  - Cast iron
  - Steel
  - Black iron
  - Galvinized iron
  - Plastics
  - Brass
  - Copper
- Weight classification
- Designation

B. TUBING
- Shapes
- Material
  - Copper
  - Brass
  - Aluminum
  - Steel
  - Stainless steel
  - Plastics
  - Glass

16861

- Designation

C. FITTINGS
- Pipe
  - Threaded
  - Flanged
  - Welded
  - Solvent-welded
- Tubing
  - Soldered
  - Welded
  - Compression-fitted
- Designation
  - Nominal size
  - Material and strength factor/Pressure rating
  - Name

D. VALVES
- Gate
- Globe
- Check
- Diaphram

E. DRAWING TECHNIQUES
- Types
  - Two-line
  - Schematic
- Symbols

F. DIMENSIONING
- Center to center
- Straight lengths

G. AMERICAN STANDARD PIPE THREADS
- Conventional thread symbols
- Engagements

/Unit II-6: ADVANCED DRAFTING DEPARTMENT PROCEDURES

The student should be aware of the existence of individual corporation standards of procedure in production and revision of drawings.

The student should be acquainted with the more common time-saving techniques allowable in specific industrial situations.

The student should be able to demonstrate an entry-level proficiency in processing engineering changes.

The student should be able to demonstrate entry-level proficiency in use of the more common time-saving techniques.

SUGGESTED TIME: 7 DAYS

A. REVISION OF DRAWINGS
- Engineering change order —— ECO
- Change letter —— Noting
- Routing of change

B. STANDARD PARTS
- Purchased
- Controlled drawings

C. TEAM DRAFTING

D. DRAWING LEVELS

E. DASH NUMBERS

F. SIMPLIFIED DRAFTING
- Using verbal descriptions instead of drawings wherever practical
- Eliminating views by using abbreviations and symbols
- Drawing of partial views
- Avoiding repetitious detail
- Using symmetry techniques whenever applicable
- Omitting unnecessary hidden lines
- Listing instead of drawing standard parts
- Using outline section linings in large section areas
- Omitting unnecessary duplication of notes in lettering
- Using symbolic representations
- Using calculators, templates, plastic overlays, and other labor-saving devices
- Eliminating unnecessary details on assembly drawings
- Using ordinate dimensions where applicable
- Avoiding sectional views where external views will be adequate

G. TRICKS-OF-THE-TRADE IN DIAZO PROCESSING
- Corrector fluids
- Scissors drafting
- Block-out
- Masking
- Transparent matte tape
- Nonreproducible blue
- Variable addition; film intermediate
- Pick-off transfers
- Composite grouping
- Composite overlays
- Preprinted data

/Unit II-7: PRODUCTION ASSEMBLY DRAWINGS

The student should be aware of the nature and uses of assembly drawings.

The student should be acquainted with the various types of assembly drawing, and the conditions which require their use.

16863

The student should be able to demonstrate by any teacher-specified means, an entry-level proficiency in preparation of assembly drawings.

SUGGESTED TIME: 25 DAYS

A. TYPES
- General
- Detail
- Diagram (schematic)
- Display (exploded)
- Tabulated
- Installation
- Arrangement
- Matched parts
- Kit drawing

The student should be aware of the existence of installation, arrangement, matched parts, and kit drawing assembly drawings. Proficiency in preparation thereof is beyond the scope of this course.

B. DESCRIPTION
- Views
- Sections
- Principal dimensions
- Necessary hidden features
- Identification of parts
  - Balloon callouts
  - Leaders
- Parts list/List of materials
  - Item number
  - Part name/description
  - Number of items required
  - Material specification
  - Detail drawing number
  - Weight, if required
  - Manufacturer (purchased parts)
  - Miscellaneous notation
- Standard format
- Notes and symbols

C. SOURCES
- Detail drawings
- Design layout
- Manufactured parts

/Unit II-8: MEASURING INSTRUMENTS

The student should demonstrate the ability to identify and select from a representative supply, any teacher-specified measuring instrument.

The student should be acquainted with the uses and with the limitations of each necessary measuring instrument.

The student should be able to demonstrate by any teacher-specified means, an entry-level proficiency in use of necessary measuring instruments.

16864

SUGGESTED TIME: 10 DAYS

A. STEEL RULES
- Machinist's scale
- Combination square

B. CALIPERS
- Inside
- Outside
- Vernier
- Micrometer

C. GAGES
- Thread pitch
- Hole
- Radius
- Depth
- Center

Projection of U.S.O.E. films
#OE 2 - How to Read a Micrometer,
#OE 3 - Fixed Gages,
#OE 4 - The Vernier, and
#OE 5 - Height Gage and Test Indicator,
should be advantageous.

/Unit II-9: PRECISION DIMENSIONS

The student should be sufficiently acquainted with measurement systems and terminology to perform operations necessary to precision dimensioning.

The student should be aware of the reasons for precision dimensioning.

The student should be able to demonstrate an ability to interpret data and to convert it to relevant information by use of standard tables of fit.

The student should be able to demonstrate an entry-level ability to place on the drawings the dimensional values and appropriate symbols.

SUGGESTED TIME: 15 DAYS

A. DECIMAL SYSTEM

B. TOLERANCING METHODS
- Unilateral
- Bilateral

C. TERMINOLOGY
- Nominal size
- Basic size
- Allowance
- Limits
  - Upper
  - Lower
  - Interpretation

D. PART INTERCHANGEABILITY
- General
  - Clearance
  - Interference
  - Transition

16865

- Systems
  - Basic hole
  - Basic shaft
- Standard cylindrical fits
- Position tolerance
  - Tolerance zones
    - Rectangular coordinates
    - Angular
  - Features in reference to datum
    - Linear
    - Angularity

E. GEOMETRIC DIMENSIONING AND TOLERANCING

- Geometric characteristics
  - Form tolerance
    - Flatness
    - Straightness
    - Angularity
    - Perpendicularity
    - Parallelism
    - Roundness
  - Position
    - Symmetry
    - Concentricity
    - True position
- Control box
  - Datum identifying
  - Feature control
  - Combination
- Modifiers
  - Maximum material condition —— MMC
  - Regardless of feature size —— RFS
  - Full indicator reading —— FIR

/Unit II-10: DRAFTING FOR NUMERICAL CONTROL

The student should be acquainted with the nature of numerical control of machines.

The student should be sufficiently acquainted with rectangular coordinates and basic trigonometric functions to perform operations necessary in preparing numerical control drawings.

The student should demonstrate an ability to select and establish the most advantageous position for datum lines.

The student should demonstrate an ability to convert dimensions to coordinate positions, and to place the information on the drawing in the manner most easily programed.

SUGGESTED TIME: 15 DAYS

A. INTRODUCTION

- Definition

16866

- Application
- Flow chart

B. BASIS
- Rectangular (cartesian) coordinates
  - Two axis
  - Three axis

C. CONTROL SYSTEMS
- Positioning —— Point-to-Point
- Continuous —— Path/Contouring

D. PROGRAMING
- Programer/Process Planner
- Medium
  - Paper tape
  - Magnetic tape
- Planning sheet
  - Format
  - Location number
  - Sequence of machine operations
  - Coordinate dimensions
  - Auxiliary functions

E. DRAWING PREPARATION
- Principal views drawn as viewed by the cutting tools
- Decimal-Inch system
- Axis
  - Horizontal —— X, paralleling the bottom of the drawing
  - Vertical —— Y, paralleling the sides of the drawing
  - Transverse —— Z, perpendicular to the plane of the drawing
  - Direction —— plus and minus
- Ordinate dimensioning
  - Zero reference point
    - On the physical part
    - Outside the physical part
  - Extension lines without lines or arrowheads
  - Tabular form for P-to-P
  - Locate target points for contouring
- Polar coordinate dimension locating of holes on a circular hole pattern
- Definition of linear hole patterns
- Bend radii for changes in contour; defined and given as reference dimension
- Tabulated form for contouring
  - Established reference planes
  - Tabulated dimensions
  - Identified contour departures
- Separation of tolerances from dimensions

/Unit II-11: FACTORS AFFECTING MANUFACTURED PARTS

The student should be sufficiently acquainted with the manufacturing

/6867

processes to relate to the process in preparing the drawing.

The student should be acquainted with the standard sources of the technical information required for production-process related drawings.

The student should be able to demonstrate by any teacher-specified means, an entry-level proficiency in selection and use of technical data in preparation or production-process related drawings.

SUGGESTED TIME: 10 DAYS

A. DESIGN FACTORS
- Castings
  - Economics
    - Quality
    - Quantity
    - Cost
  - Material
  - Part size
  - Part shape
  - Degree of accuracy
  - Casting tolerance
- Forgings
  - Strength
  - Accuracy
  - Surface quality
- Stampings
  - Size
  - Nesting of blanks
  - Notches
  - Beads and ribs
  - Flanges
  - Radii
  - Holes

B. MISCELLANEOUS MANUFACTURING PROCESSES
- Blasting
  - Sand
  - Grit
  - Shot
- Sawing
- Torch cutting
- Tumbling
- Snagging

It is necessary that the student be aware of the existence of these processes, and be acquainted with the basic procedures. Detailed knowledge is beyond the scope of this course.

/Unit II-12: JIGS AND FIXTURES

The student should be aware of the purpose of jigs and fixtures.

The student should be able to demonstrate an ability to recognize jigs and fixtures.

16868

The student should be able to demonstrate by any teacher-specified means, a knowledge of the characteristics of various type jigs and fixtures.

The student should be able to demonstrate entry-level proficiency in the preparation of jig and fixture drawings.

SUGGESTED TIME: 25 DAYS

A. JIGS
- Function
- Types
  - Plate
    - Template
    - Leaf
  - Box
    - Tumble
    - Turnover
  - Built-up

DETAILS OF WINDOW FRAME & TRIM.

ILLUSTRATION SHEET 29.

/Unit II-13: CHARTS AND GRAPHS

The student should be aware of the nature and purpose of charts and graphs.

The student should be able to demonstrate by any teacher-specified means, an ability to interpret charts and graphs.

The student should be able to demonstrate entry-level proficiency in preparing charts and graphs from drawings.

SUGGESTED TIME: 7 DAYS

A. FORMAT TYPE
- Quantitative
- Qualitative

B. TYPES
- Rectangular coordinate graph
- Semilogarithmic graph
- Logarithmic graph
- Bar chart
- Percentage bar chart
- Pie chart
- Pictorial chart
- Flow chart
- Operation process chart
- Organization chart
- Polar coordinate chart
- Trilinear chart
- Alignment chart (Nomograph)

C. INTERPRETATION

/Unit II-14: PREPARATION FOR EMPLOYMENT

The student should be aware of the personal and professional qualifications required by personnel departments.

The student should be acquainted with the common sources of employment opportunity information.

The student should be acquainted with the standard procedures of applying for employment.

The student should be able to demonstrate proficiency in completing a representative sample job application form.

SUGGESTED TIME: 3 DAYS

A. QUALIFICATIONS
- Resumé
  - Factual

Films on job interviews are available from commercial suppliers.

ABSTRACT - This learner's manual was prepared by the Division of Vocational Education of the Ohio State Department of Education, in cooperation with various persons and organizations, for use in the Ohio Law Enforcement Officers' Training Program. The program is designed to adequately meet the needs and improve the competencies and skills of local law enforcement personnel. Included in the 25 training procedures are: (1) Uniform, Acquiring and Maintaining, (2) Felonies, Handling, (3) Testifying in Court, (4) Fire Scenes, (5) Traffic Congestion, Handling, and (6) Emergency Care--First Aid. The appendixes consist of 45 sections, including: (1) Bill of Rights, U.S. Constitution, (2) Business Security Survey Report, (3) Field Sketch Sheet, (4) Commercial Restraint Devices, and (5) Report of Death. A bibliography is provided, and the manual is illustrated with line drawings, diagrams, and photographs. Related documents are available as ED 016 025 and ED 016 027 (VT 000 689 and VT 000 692, respectively, both in AIM Spring 1968). (GEB)

Preface

The State Department of Education has been instrumental in providing training in skilled and technical occupations to the citizens of Ohio since 1918, through the Trade and Industrial Education Services, Division of Vocational Education.

Training in trade and industrial education enables individuals, both male and female, to prepare for initial employment in a trade, technical or service occupation. In addition, it enables employed workers to upgrade themselves and advance in their chosen occupations, and retrains those who are temporarily unemployed.

In the adult category, special emphasis is placed on training for public service personnel, such as fire fighters, rescue and emergency personnel, school bus drivers, custodians, hospital housekeepers, electric linemen and law enforcement officers. The purpose of this training is to upgrade the services rendered to the citizens of a community by improving and providing additional skills and/or knowledge, thereby resulting in more efficient and effective services.

The cost of crime and traffic accidents, including the human suffering resulting therefrom, is an enormous waste of every community's resources. A well trained and efficient law enforcement officer is probably the most effective means of reducing this human toll and suffering.

The Law Enforcement Training Program of the Vocational Trade and Industrial Education Services in Ohio is intended to provide training to officially designated law enforcement agencies. The purpose of this manual is to supplement this organized training program planned to provide the law enforcement officer with the skills and technical knowledge essential in carrying out his duties. It outlines methods of effective operation which will enable each officer to recognize the importance of his position within the law enforcement agency and to stimulate the officer in performing his service with pride.

The Law Enforcement Officers Training Program and this publication are provided through the cooperative efforts of the Trade and Industrial Education Services, Vocational Division, State Department of Education; College of Education, The Ohio State University; and the public schools of Ohio.

Martin Essex, Superintendent of
Public Instruction

Byrl R. Shoemaker
Director of Vocational Education

16881

Foreword

The Law Enforcement Officers Training Program was developed by the Trade and Industrial Education Services, Division of Vocational Education, to meet the needs expressed by the Buckeye State Sheriffs' Association and the Ohio Association of Chiefs of Police, for an effective training program.

This training program is designed to provide law enforcement officers with a better understanding of the many problems involved in providing good law enforcement services. It presents practices which have been used successfully in organized training programs in various sections of the country.

In former years, law enforcement services were primarily concerned with enforcing a few state and local laws, controlling a comparatively small number of vehicles, and effecting the arrest of local violators. New officers were often placed on duty without receiving adequate training, necessary supplies and equipment. This frequently resulted in ineffective law enforcement services. Fortunately today, ineffective practices are not as prevalent as they once were. The recent increase in the number and variety of laws, increase of ownership and use of vehicles, the growth of urban areas, and the demands of a better educated public has led Ohio to recognize the need for training in the knowledge, skills and services of a specialized nature. The Ohio Law Enforcement Officers' Training Program should help communities provide more effective and efficient law enforcement services.

The objectives of this training program sponsored by the Trade and Industrial Education Services are as follows:

1. To determine local, county, regional and state needs and to implement a program to adequately meet these needs on a continuing basis.

2. To improve the competencies and skills of local law enforcement personnel.

The state supervisor and the law enforcement training staff within the Trade and Industrial Education Services utilized a State Law Enforcement Advisory Committee in order to determine the previously mentioned objectives; the principles and policies for the law enforcement training program; and the manner in which it is conducted in Ohio. This advisory committee is composed of representatives from The Buckeye State Sheriffs' Association and The Ohio Association of Chiefs of Police, Incorporated.

16882

A comprehensive training program for law enforcement officers is being implemented. The following types of training are now available:

Basic Training
Advanced Training
Regional Law Enforcement Institutes'
State Law Enforcement Institute
Arson Investigation

Officer Leadership Training:
- Instructor Training
- Conference Leadership
- Effective Speaking
- Human Relations
- Job Methods

The intent of this manual is to provide the necessary instructional material, which will serve as an up-to-date and comprehensive source of information, covering the practices and techniques of the procedures included in the Basic Course - Unit I. Instructional materials of this type are the key to conducting an effective and efficient training program.

It is our sincere desire that law enforcement officers throughout the state will realize the ultimate benefits to be gained in the organized state training programs utilizing this manual and its procedures.

Harry Davis, Supervisor
Trade and Industrial Education Services

16883

Acknowledgments

The Trade and Industrial Education Services acknowledges the cooperation and contributions made by the various persons in devoting their time, and giving advice and council in the development of this manual.

Special acknowledgment is extended to the members of the State Advisory Committee for Law Enforcement Training, and to the two statewide organizations which they represent, for their encouragement and assistance in the development of this material and the overall training program. Members representing the two organizations and consultants to the committee are as follows:

The Buckeye State Sheriff's Association
Doug Ziegler, Sheriff, Defiance County, Ohio
Roger D. Stillings, Sheriff, Champaign County, Ohio
Dwight E. Radcliff, Sheriff, Pickaway County, Ohio

The Ohio Association of Chiefs of Police
Milan Duris, Chief of Police, Bedford, Ohio
Robert Temple, Chief of Police, Circleville, Ohio
Frank Burnodky, Chief of Police, Canton, Ohio

Consultants to the committee
Harry Davis, Supervisor, Trade & Industrial Education Services
Frank Oliverio, Assistant Supervisor, Trade & Industrial Education Services
Dr. Robert M. Reese, Director, Trade & Industrial Education Services, The Ohio State University
Dr. Byrl R. Shoemaker, Director Division of Vocational Education, State Department of Education, Columbus, Ohio
Robert S. Takacs, Consultant, Law Enforcement Training
Harry L. Smith, Specialist, Law Enforcement Training

Acknowledgment is extended to the various associations and companies who granted permission for use of certain of their materials, as acknowledged by courtesy lines in the Appendix.

Special credits are extended to Robert S. Takacs, Consultant, and Harry L. Smith, Specialist, Law Enforcement Training staff, Trade and Industrial Education Services, for the development of the content and to Dr. Robert M. Reese and Wilbur F. Stover, Consultant, Instructional Materials Laboratory, The Ohio State University, for developing the format and editing the content of the material.

Special mention is extended to the staff of the Instructional Materials Laboratory for their efforts in the composition and production of this manual.

Training Procedure No. 1

UNIFORM, ACQUIRING AND MAINTAINING

INTRODUCTORY INFORMATION:

Law enforcement officers wear uniforms in order to perform their duties more effectively and safely.

The officer in uniform is the government's symbol of law and order. The very sight of an officer, in most instances, stops the potential law violator from committing a crime for fear of apprehension. In this respect, the uniform serves a crime preventive function. Since the prevention of crime is the officer's primary responsibility, the uniform which is seen most often by the most people is the most effective.

The uniform identifies the officer as a member of that arm of government which is responsible for ensuring compliance with the law. Due to the hazardous nature of the duties involved, such as, the use of firearms in arresting a criminal, it is imperative that not only the person being arrested recognize the officer, but spectators as well. This is necessary in order that the criminal have no excuse for non-compliance and the law abiding no misunderstanding as to what is taking place--an arrest or a robbery. In this respect it aids the officer's personal safety.

Because the law enforcement officer will be required to wear a uniform he must concern himself with quality, economy, and appearance. Since there is no substitute for good quality, the officer should accept nothing less. Whether the officer personally purchases or is issued a uniform does not alter the fact that it costs money to purchase and to maintain. By following a few simple procedures the officer can extend the life of the uniform thereby saving money and at the same time maintaining a neat appearance. The neat appearing officer finds it less difficult to have people comply with his requests and creates a favorable impression in the eyes of the public for himself and his department.

EQUIPMENT NEEDED:

Clothes hangers, Wooden
Fabric Cleaning:
- Cleaning fluid
- Cloth, Soft white
- Clothes brush, Hard bristle
- Hat brush, Soft bristle
- Lint remover

Leather Polishing:
- Brush
- Cloth, Polishing
- Metal polish dauber (with scraper)
- Saddle soap
- Shoe polish, Black
- Sole dye, Black

16887

Assignment

WS. 55. First Floor Plan: Using Work Sheet 55, fill in the symbols shown on Illustration Sheet 25, page 89. The numbers on the floor plan shown on WS 55 indicate the location of the different symbols. Square the Work Sheet on your drawing board and use instruments to draw the symbols. Letter-in the title strip and hand the drawing in for grading.

WS. 56. Garage Elevations: Using Work Sheet 56, complete the front and side elevations of the garage. Square the Work Sheet on your drawing board and use instruments to complete the drawing. Illustration Sheet 27, page 93, shows an elevation of a house.

WS. 57. Wall Section: Study Illustration Sheet 28, page 95, and learn the names of some of the parts of a house. Now use Work Sheet 57 and letter-in the name of the house part corresponding to each number. Using the lines already given opposite the number, measure 1/8" above each line and draw a light guide line through your measurement. This will give you a set of guide lines 1/8" apart for your lettering.

WS. 58. Double Hung Window: Study Illustration Sheet 29, page 97, and learn the given parts of a double hung window. Now use Work Sheet 58 and letter-in the name of the window part corresponding to each number. Using the lines already given opposite the number, measure 1/8" above each line and draw a light guide line through your measurement. This will give you a set of guide lines 1/8" apart for your lettering.

Training Procedure No. 1

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS	
		1.10	Having snaps sewn on both ends of all pocket flaps of jackets and shirts
2.	Dry clean woolens	2.1	Regularly
		.2	Selecting a reputable firm
		.3	Identifying stain by attaching note
		.4	Requesting military crease in shirts
3.	Launder cottons	3.1	After each wearing
		.2	Ironing military creases into shirts
4.	Brush clothing	4.1	Frequently
		.2	Before and after wearing
		.3	Outdoors in sunlight
		.4	Brushing hats gently using soft bristle brush
		.5	Using hard bristle brush on clothing and caps
		.6	Brushing clothing vigorously
		.7	Removing lint with lint remover
5.	Shine leather	5.1	Shoes daily
		.2	Other leather at least once a month
		.3	Cleaning with saddle soap regularly
		.4	Preventing excessive accumulation of polish
		.5	Avoiding a hard finish (high gloss) on leather parts that flex
6.	Shine metal	6.1	Daily, using correct polish for particular metal finish
		.2	Following instructions on polish containers
		.3	Avoid scratching of surface
		.4	Avoid handling polished metal
7.	Dry out wet uniform	7.1	Promptly
		.2	To prevent mildew and maintain shape

16889

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS
7.a. Caps or hats	7.a.1	Shaking off excess water
	.2	Blotting visor with soft absorbent cloth
	.3	Wiping metal buttons dry
	.4	Removing cap badge
	.5	Turning leather liner down
	.6	Removing all size adjusting material
	.7	Placing on flat surface
	.8	Setting on visor and brim
7.b. Clothing	7.b.1	Removing belts
	.2	Emptying all pockets
	.3	Removing all metal insignia
	.4	Shaking off excess water
	.5	Wiping all metal parts dry
	.6	Fastening buttons
	.7	Closing zippers
	.8	Hanging shirts and coats on wooden hangers
	.9	Using wooden clamp hangers for trousers
	.10	Placing on hangers carefully
	.11	Removing and smoothing wrinkles
	.12	Allowing adequate air circulation
	.13	Allowing to dry naturally
	.14	Keeping away from heat
	.15	If excessively wet, have dry cleaned after drying
7.c. Shoes and overshoes	7.c.1	Wiping off excess water outside and inside
	.2	Using wooden shoe trees to retain shape
	.3	Lacing and tying shoe laces to retain shape
	.4	Laying shoes on sides on protective covered flat surface
	.5	Allowing to dry naturally
	.6	Keeping away from heat

16890

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS	
7.d. Leather, weapon and foul weather gear	:	7.d.1	Wiping off water
	:	.2	Removing equipment from holster and cases, following safe weapon procedures
	:	.3	Removing cartridges from revolver
	:	.4	Hanging belts and straps from buckles - straight
	:	.5	Wiping dry all metal
	:	.6	Emptying pockets of leather jacket
	:	.7	Hanging jacket on wooden clothes hanger
	:	.8	Placing on hanger carefully
	:	.9	Buttoning buttons
	:	.10	Closing zippers
	:	.11	Removing wrinkles
	:	.12	Turning collars up
	:	.13	Placing glove on upright stick to aid circulation
	:	.14	Allowing adequate air circulation
	:	.15	Allowing to dry naturally
8. Clean revolver	:	8.1	Remaining isolated
	:	.2	Rechecking cylinder to make certain it is empty
	:	.3	Handling to prevent damage
	:	.4	Inspecting for serviceability
	:	.5	Completely
	:	.6	Using proper materials and equipment
	:	.7	Securing weapon after cleaning
9. Remove loose dirt	:	9.1	When thoroughly dry
	:	.2	Working in area covered with newspaper
	:	.3	Using clothes brush on clothing
	:	.4	Brush with and against nap carefully
	:	.5	Using scraper on shoes
	:	.6	Avoid scuffing of leather
10. Remove stains	:	10.1	Promptly
	:	.2	Avoid damaging the fabric
	:	.3	Placing clean absorbent cloth under stain

16891

Training Procedure No. 2

PATROLLING ON FOOT - DAYTIME - *NIGHTTIME

INTRODUCTORY INFORMATION:

The officer is responsible for guarding persons, their rights, and property in a designated area by requiring all people therein to obey the law. This guard duty is performed best when the officer goes about his designated area (beat) inspecting persons and property as often as possible. Performing this duty is called patrolling. The officer enforces the law on all persons on his beat by persuasion if possible, by force if necessary.

Patrolling, when properly performed, is the best method by which the law enforcement officer can carry out his primary responsibility of preventing crime. The basic method of patrolling is on foot. Its chief advantage over other methods is the officer's daily intimate contact with the people and the property on his beat. It is from these contacts that the officer learns who resides, earns a livelihood, and engages in recreation on the beat. By careful observation, he soon learns who and what is usual or unusual.

The law enforcement officer can become more proficient and effective during the time he is on duty (watch) by the constant application of the proper patrolling techniques contained herein.

EQUIPMENT NEEDED:

Baton, Riot
Belt, Sam Browne
Card, Identification (See Appendix 13)
Cards, Business
Cartridges, 12, Extra Revolver
Case, Cartridge, Double
Case, Handcuff
Chain, Whistle
Citation Book, Traffic
Dimes
Flashlight, with extra bulb

Forms:
- Business Security Survey Report
- Information on Personalities
- Persons Report
- Preliminary Investigation Report (See Appendix 14)

Handcuffs
Holster, Closed Revolver
Key, Handcuff
Keys, Other (as required)
Knife, Pocket
License, Operator's
Map, Local
Notebook, Pocket
Pen, Ball Point
Pencil, Mechanical
Radio, Portable Two-way Transistor
Revolver, Loaded Service

Note: Items identified by an asterisk pertain to nighttime patrolling only.

16892 6/7

LAW ENFORCEMENT OFFICER TRAINING

Ring, Baton (with strap)
Ruler, 6" Plastic
Schedule, Local Commercial Transportation
Stick, Yawara
Timepiece
Uniform of the Day
Whistle, Traffic

GENERAL SAFETY PRACTICES:

Maintain physical fitness
Wear six inch duty shoes with protected toes and rubber heels
All eye glasses, including sunglasses, should have hardened lens and be prescribed by an oculist
Be constantly alert for potential personal hazards
Stop and listen before turning corners
Weapons must never be given to anyone in the field
Secure all equipment from rattling
Approach all persons and things with caution
Use prescribed whistle and flashlight signals
Carry change in watch pocket
Hold flashlight in weak hand
Keep flashlight away from body when in use
Check flashlight for serviceability
*Night duty should never be performed with a cold or persistent cough
*To maintain night vision, avoid heavy smoking and use of intoxicating beverages
*Loud talking, singing, or whistling should be avoided
*Close one eye when a bright light appears, to maintain night vision
*Maintain your sense of direction
*Run only when absolutely necessary
*Avoid smoking when walking the beat
*Secure all equipment from reflecting

STEPS		KEY POINTS
ON DUTY RELIEF		
1. Prepare for watch	1.1	Inspecting personal equipment for serviceability
	.2	Reporting in well groomed
	.3	Wearing uniform of the day
	.4	Reporting before prescribed time
	.5	Avoid loitering in business offices
	.6	Checking bulletin board
	.7	Recording date, day of week, watch, beat, weather condition, supervisor's name on Note Book Log Sheet (See Appendix 4)

16893

STEPS	KEY POINTS
	1.8 Receiving orders and pertinent information from watch commander
	.9 Recording necessary law enforcement intelligence in notebook (See Appendices 5 and 6)
	.10 Standing inspection for watch commander
	.11 Discussing beat activity with supervisor (See Appendix 7)
2. Proceed to watch relief point	2.1 At pre-determined location
	.2 Arranging for transportation with supervisor
	.3 Varying time and route pattern
	.4 Handling violations witnessed enroute
	.5 Arriving early
	.6 Being inconspicuous
3. Meet with beat officer	3.1 Recording:
	.1 Name
	.2 Number
	.3 Time
	.4 Location
	.2 Obtaining pertinent information:
	.1 Cases requiring follow-up
	.2 Requests for law enforcement intelligence
	.3 Law enforcement hazards
	.4 Previous information
	.5 Safety hazards
	.6 Changes in trafficways
	.3 Selecting next watch relief point:
	.1 Having good view of beat
	.2 Should be inconspicuous
	.3 Sheltered location during inclement weather
	*.4 Should be lighted and safe
	.5 Varying the location
	.6 Recording location
	.4 Notifying dispatcher when unable to make contact

16894

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS	
4. Relieve beat officer	:	4.1	Taking charge of beat
	:	.2	Leaving beat only for required duties
	:	.3	Requesting supervisor's permission to leave
	:	.4	Notifying dispatcher of location
	:	.5	Recording all absences from beat and reasons therefore
	:	.6	Acting on pending assignments requiring immediate action
	:	*.7	Inspecting pedestrian or other hazards requiring lighting
RECONNAISANCE PATROL			
5. Proceed to area to be reconnoitered	:	5.1	Selecting area with:
	:	.1	High criminal, pedestrian, or vehicle activity
	:	.2	Larger proportion of law enforcement or safety hazards
	:	.3	Activity which is to take place during watch
	:	*.4	Bright lighting first
	:	*.5	Little or no lighting last
	:	.2	Varying time and route pattern
6. Reconnoiter the area	:	6.1	Being systematically unsystematic in patrolling
	:	.2	Covering selected areas fairly rapidly
	:	.3	Constantly utilizing peripheral vision
	:	.4	Stopping and listening for unusual activity before turning corners
	:	.5	Be alert to present and future activity
	:	.6	Noting activity that may occur during watch
	:	.7	Handling only those problems requiring immediate attention
	:	*.8	Dark-adapting eyes by closing them momentarily before entering dimly lighted areas
	:	*.9	Avoid direct bright lights

16895

STEPS		KEY POINTS	
		*6.10	Stand and look into darkened areas
7.	Talk with sources of information	7.1	Having vantage occupations
		.2	Learning of activity that may occur during watch
8.	Observe persons, places, and things	8.1	Anything unusual
		.2	Indicating activity that may occur during watch
		*.3	Observing distance reduced and distorted during nighttime and certain weather conditions
	STANDARD PATROL		
9.	Proceed to location to be inspected	9.1	Walking slowly and erectly
		.2	Letting yourself be seen
		.3	Grasping strong hand with weak hand behind back
		.4	Unofficial objects must not be carried
		.5	Using heel to toe method--on outside edge
		.6	Walking on ball of foot when using stairs
		.7	Avoiding surveillance by others
		.8	Stopping and looking back over route traveled
		.9	Being aware of physical background
		.10	Looking at opposite side of street, upper floors, and roofs of buildings
		.11	Stopping and listening for unusual activity before turning corners
		.12	Being aware of changes in trafficways
		.13	Handling problems as they occur:
		.1	Within jurisdiction and capabilities
		.2	Requesting departmental assistance from supervisor or dispatcher when necessary

16896

STEPS	KEY POINTS
	9.13.3 Criminal, traffic, juvenile, and special requests in that order
	.14 Time and place of patrol interruptions should be recorded
	.15 Telephone service should be available at location of interruption
	.16 Varying time and location of personal breaks and meal period
	.17 Covering beat as often as possible until time of relief
	*.18 Walking quietly
	*.19 Standing and walking in shadows
	*.20 Avoiding being seen or silhouetted
	*.21 Crossing streets where there is least amount of light
	*.22 Being alert for potential assaults in dimly lighted areas
10. Inspect public property	10.1 Recording time and location of:
	.1 Unsafe conditions
	.2 Damaged property
	.3 Improperly functioning equipment
	.4 Dead or injured animals
	.2 Correcting unsafe conditions immediately when within authorization and capability
	.3 Notifying dispatcher when immediate corrective action beyond capability, is necessary
	.4 Reporting, in writing, unsafe conditions and recommendations for improvement to supervisor (See Appendix 7)
11. Conduct business security survey	11.1 Contacting businessmen periodically and leaving business card on first contact (See Appendix H)
	.2 Assuring periodic inspection
	.3 Inspecting business security measures
	.4 Completing Business Security Survey Report form (See Appendices 9 and 10)

16897

STEPS	KEY POINTS	
	11.5	Recording current information:
	.1	Name, address, and telephone number of business, manager, and assistant manager
	.2	Type and amount of security equipment
	.3	Security measures taken in operations
	.4	Security hazards
	.5	Selected employees
	.6	Recommended improvements
	.6	Requesting beat officer on night watch to check nighttime security and to make recommendations
	.7	Giving completed form to supervisor
12. Inspect security of buildings	12.1	Those closed for special reasons
12.a. Exterior	*a.1	At close of business day
	.2	Locating security alarms, knowing type and nature of installation
	.3	Checking security equipment to be in place, original, and serviceable
	.4	Remaining inconspicuous to anyone inside
	.5	Trying all accessible means of entry and exit, especially rear and roof
	.6	Looking for indications of attempted and completed forced entry from without and within
	.7	Looking and listening for movement from within
	.8	Checking interior physical arrangement for alterations
	.9	Recording inadequate security measures
	.10	Recommending adequate security measures, if requested by owner
12.b. Interior	b.1	Recording time building found unsecured

16898

WS. 59. Door: Study Illustration Sheet 30, page 99, and learn the given parts of a door. Now use Work Sheet 59 and letter-in the name of the door part corresponding to each number. Using the lines already given opposite the number, measure 1/8" above each line and draw a light guide line through your measurement. This will give you a set of guide lines 1/8" apart for your lettering.

STEPS		KEY POINTS
	12.b.2	Recording name and address of occupying firm
	.3	Notifying dispatcher of name of firm, building, and location
	.4	Requesting assistance for interior inspection
	.5	Requesting dispatcher to notify owner, request his presence, and determine his estimated time of arrival
	.6	Determining if authorized person is inside
	.7	Checking authorized person's identity with owner
	.8	Recording name, position of employee, home address, and telephone number
	.9	Recording name and position of person responding in place of owner
	.10	Entering building with another officer
	.11	Avoiding being silhouetted
	.12	Carrying revolver in strong hand
	.13	Carrying flashlight in weak hand, if interior dark
	.14	Holding flashlight to side and slightly ahead of body when in use
	.15	Keeping other officer or flashlight in view at all times
	.16	Using proper flashlight signals
	.17	Avoiding cross fire
	.18	Checking one room at a time
	.19	Looking up as well as on floor level
	.20	Starting on lowest floor, working up
	.21	Closing all doors after entering each room
	.22	Locking all doors after searching each room
	.23	Walking quietly, using short steps
	.24	Stopping and listening for movement sounds
	.25	Completing search of building even if one suspect apprehended

16899

STEPS	KEY POINTS
13. Inspect security of property	13.1 Checking security equipment to be in place, original, and serviceable
	.2 Checking physical arrangement of property
	.3 Recording inadequate security measures
	.4 Notifying owner of inadequate security measures
	.5 Recommending adequate security measures, if requested by owner
14. Inspect parked vehicles	14.1 Selecting those that are unusual as to:
	.1 Area
	.2 Beat
	.3 Location in which parked
	.4 Manner in which parked
	.5 Time at which parked
	.6 Length of time parked
	.7 Neglected care or condition
	.8 Altered or absence of required identification
	.9 Contents
	.2 Approaching from rear cautiously
	.3 Checking for occupants cautiously
	.4 Checking license number against Wanted Vehicle list (See Appendix 6)
	.5 Determining if stolen or abandoned
	.6 Determining if wanted--with or without occupants
	.7 Determining if being or has been used in committing crime
	.8 Determining ownership
	.9 Recording license number, description, and location of suspicious vehicles
	.10 File checking with dispatcher at first opportunity

16900

STEPS		KEY POINTS
	14.11	Marking rim of tire with pencil for future identification
	.12	Citing flagrant parking violators
	.13	Maintaining wanted vehicle list
15. Inspect transient lodging facilities	15.1	Hotels, motels, and trailer courts
	.2	Including parking facilities
	.3	Talking with employees regarding guests
	.4	Reviewing registers
	.5	Noting new guests
	.6	File checking selected guests and vehicles
	.7	Having employees look at photographs of wanted persons
	.8	Walking quietly around corridors
16. Inspect establishments considered a law enforcement hazard	16.1	Including hangouts of known or suspected criminals
	.2	At time of opening and closing
	.3	At time of peak activity
	.4	At time violations most likely to occur
	.5	Frequently
	.6	Locating all entrances and exits before entering
	.7	Varying points of entry and exit
	.8	Pausing and listening before entering
	.9	Dark-adapting eyes by closing them momentarily before entering dimly lighted establishments
	.10	Using caution in entering
	.11	Carrying flashlight in weak hand
	.12	Observing activity, especially the unusual, throughout establishment
	.13	Noting employees and clientele
	.14	Noting changes of employees and clientele
	.15	Noting potential violations and violators
	.16	Noting changes in physical facilities
	.17	Avoid lingering

16901

STEPS		KEY POINTS
17. Inspect locations considered a law enforcement hazard	17.1	At time violations most likely to occur
	.2	More frequently and intensively where crime rate is high
	.3	Varying avenue of approach, points of entry, and exit
	.4	Checking physical arrangement, entrances, and exits
	.5	Talking with persons who frequent the location
	.6	Keeping known criminals away, legally, or under surveillance
	.7	Advising clientele and attendants of crime preventive procedures
	.8	Noting potential violations and preventing them from becoming actual
	.9	Determining how the hazards can be reduced
	.10	Reporting recommendations to supervisor
18. Develop sources of information	18.1	Selecting persons with vantage occupations
	.2	Recording data about source on Information on Personalities form (See Appendix 11)
	.3	Building confidence
	.4	Gathering law enforcement intelligence
	.5	Determining conspicuousness by source and circumstances
19. Interrogate suspicious persons	19.1	When time, place, appearance, and/or actions of a person appears to be out of the ordinary
	.2	To know unusual people or criminals on the beat
	.3	Approaching with caution
	.4	Remaining at a discreet distance

16902

STEPS		KEY POINTS
	19.5	Asking as few questions as possible
	.6	Keeping strong side away from person being interrogated
	.7	Speaking in conversational tone
	.8	Recording all field interrogations
	.9	Completing Persons Report later (See Appendix 5)
	.10	File checking selected suspicious persons
	.11	Maintaining wanted persons list
	.12	Determining if wanted, runaway, or lost
20. Report in	20.1	As ordered or scheduled
	.2	To dispatcher
	.3	For security check
	.4	Within 10 minute leeway of designated time
	.5	Varying time and location
	.6	Selecting sheltered location during inclement weather
	.7	Identifying location and telephone number
	.8	Using identifying code
	.9	Having pen and notebook ready for note taking
	.10	Obtaining pertinent information
	.11	Arranging for information pick-up point, when necessary
	.12	Keeping conversation brief and to official business only
	.13	Recording dispatcher's name
	.14	Recording time and location of report in
	*.15	Closing call box door quietly
	*.16	Keeping outdoor public phone booth light off by leaving door open
	*.17	Dialing operator only if silence required
	*.18	Cupping flashlight head with hand

16903

STEPS	KEY POINTS
OFF DUTY RELIEF	
21. Proceed to watch relief point	21.1 Meeting the relief officer
	.2 At end of duty hours
	.3 At pre-determined location
	.4 Varying time and route pattern
	.5 Handling violations witnessed enroute
	.6 Arriving after relief officer
22. Meet the relief officer	22.1 To be properly relieved of beat
	.2 Recording:
	.1 Name
	.2 Number
	.3 Time
	.4 Location
	.3 Providing pertinent information:
	.1 Cases requiring follow-up
	.2 Requests for law enforcement intelligence
	.3 Law enforcement hazards
	.4 Previous information
	.5 Safety hazards
	.6 Changes in trafficways
	.4 Selecting next watch relief point:
	.1 Having good view of beat
	.2 Should be inconspicuous
	.3 Sheltered location during inclement weather
	*.4 Should be lighted and safe
	.5 Varying the location
	.6 Recording the location
	.5 Turning beat over to relief officer
	.6 Notifying the dispatcher when unable to make contact
23. Proceed to headquarters	23.1 Completing and turning in required reports
	.2 Varying time and route pattern
	.3 Handling violations witnessed enroute
	.4 Reporting off duty to supervisor or dispatcher upon arrival

16904

STEPS		KEY POINTS
	23.5	Avoid loitering in business offices
24. Complete required reports	24.1	Recording activities and law enforcement intelligence
	.2	Before leaving headquarters
	.3	Using pen or typewriter
	.4	Properly and legibly
	.5	Officer's Watch Activity Report (See Appendix 12)
	.6	Turning in reports to supervisor
	.7	Retaining a copy of all reports for personal file

16905

Training Procedure No. 3

PATROLLING IN AN AUTOMOBILE - DAYTIME - *NIGHTTIME

INTRODUCTORY INFORMATION:

Since the uniformed officer is more effective in preventing crime when constantly patrolling, it also follows that a properly and conspicuously marked automobile is more effective when kept constantly on patrol. The law enforcement officer must realize that a patrol car is an expensive piece of equipment and only when properly used can it aid him in performing his duties more efficiently and safely, while at the same time providing economical law enforcement services to the community.

Proper patrolling in an automobile is by far the most efficient method of providing law enforcement services to a large area. An officer can check a beat involving a greater area more often and with less fatigue with a patrol car than by foot. The patrol car radio affords constant and instant contact with headquarters and other patrol cars should assistance be required for the officer's safety. Calls and assignments can be answered more rapidly, thereby, increasing the officer's efficiency and improving the services rendered. It provides protection during inclement weather and in gun battles. It permits carrying and having readily available a variety of equipment, thereby, making the officer practically self-supporting. The transporting of officers, prisoners, and other authorized persons are more easily and rapidly handled. A patrol car provides the officer with an element of surprise due to the patrol car's speed and mobility.

There are many other advantages in the use of a patrol car than those listed above, however, the real value of patrolling in an automobile is dependent upon the officer using the car properly and effectively.

EQUIPMENT NEEDED:

- Accident Investigation Kit
  - Crayon, Marking (yellow lumber)
  - Paper, Graph
  - Tape Measure, 100 ft. Metal Reinforced Cloth
  - Tape Measure, 10 ft. Spring Steel (white surface)
  - Template, Accident Investigator's
- Bags, Evidence
- Baton, Traffic (red)
- Belts, Safety Seat
- Bulb, Traffic Baton (extra)
- Camera Kit:
  - Bulbs, Flash
  - Camera
  - Flash Unit (battery condenser type)
  - Film
- Clipboard
- Code Book, Motor Vehicle

Note: Items identified by an asterisk pertain to nighttime patrolling only.

 16906

Code, Radio
Compass, Magnetic
Credit Card, Gasoline, Departmental
Desk, Patrol Car
Fire Extinguisher, Carbon Dioxide
First Aid Kit
Forms, Prepared Report (as required)
Gloves, Driving
Helmet, Safety
Holder, Riot Baton
Holder, Traffic Baton
Holder, Fire Extinguisher
Holder, First Aid Kit
Holder, Flashlight
Holder, Electric Lock Shotgun
Holder, Shotgun Shell
Keys, Patrol Car
Light, Interior (Manually operated only)
Light, Emergency Beacon
Light, Plug-in Spot (with 100' cord)
Lights, Two Spot
Mirrors, Outside Rear View (2)
Panel, Switch
Radio, Three-way
Raincoat
Rescue Kit:
- Bar, Crow and/or wrecking
- Blanket
- Crash-axe, Shock Proof
- Fusees, Red, 30 Minute (12)
- Gloves, Cloth (plastic coated)
- Holders, Fusee (12)
- Rope, 1/2" Polypropylene or Nylon (100 ft.)
- Stands, Fusee (2)

Screen, Folding Plexiglass Dividing
Shotgun, Riot
Signal, Recall
Siren, Vehicle (Electronic)
Speedometer, Calibrated (with lock button)
Tags, Property

GENERAL SAFETY PRACTICES:

Be constantly alert for potential personal hazards
Maintain physical fitness
All eyeglasses, including sunglasses, should have hardened lens and be prescribed by an oculist
Use safety seat belts
Do not drive when ill
Maintain proper vehicle ventilation
Keep the vehicle under control at all times
Obey all traffic laws
When leaving vehicle, notify dispatcher as to location
Park properly
Approach all persons and things with caution
*To maintain night vision when driving, focus eyes slightly away from bright head lights
*Close eye nearest bright light, in order to maintain night vision
Effectiveness of senses is impaired during vehicle operation

16907

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
	ON DUTY RELIEF
1. Prepare for watch	1.1 Obtaining assigned patrol car at headquarters
	.2 Inspecting patrol car: (See Appendix 15)
	.1 Serviceability of vehicle and equipment
	.2 Condition of exterior and interior
	.3 Recording and reporting damage to supervisor
	.4 Quantity of fuel and oil
	.5 Testing electrical equipment and brakes
	.6 Verifying performance of radio
	.7 Counting quantity and determining serviceability of auxiliary equipment
	.8 Searching interior for discarded weapons, evidence, and lost or forgotten property
	.9 Removing all unofficial objects
	.10 Recording patrol car number, starting mileage, and time
	.11 Signalling "On Duty" to dispatcher, using approved radio code
2. Proceed to watch relief point	2.1 Requesting beat officer to designate location
	.2 Securing safety seat belt
	.3 Obeying all traffic laws
	.4 Being a courteous driver
	.5 Keeping both hands on steering wheel
	.6 Parking properly
	.7 Parking patrol car facing exit when using off-street facilities
	.8 Being inconspicuous
	*.9 Turning off all lights
	*.10 Keeping foot off brake pedal
	*.11 Turning radio volume down
	.12 Setting emergency brake

16908

UNIT VIII — MACHINE DRAWING

General Information

Machine Drawing:

Machine drawings are those that describe some machine part or the entire machine. Included in machine drawing may be most any object made of metal, especially metal objects that have to be made with a metal-working machine. These are said to be "machined". Machined parts of jet engines, rockets, and automobile engines must be made very accurately and finished in some cases to two or three ten thousandths of an inch. To check these parts for accuracy, tools such as micrometers, gages, and other measuring instruments are used. The Ford Motor Company puts out what is known as the Johannesen Gage Blocks which are accurate to the almost unbelievable figure of TWO MILLIONTHS of an inch.

Machine parts are made of cast iron, various kinds of steels, brass, bronze, tin, aluminum, and many alloys. Some metals are cast, some are forged, and some are cut from solid blocks into the required shapes. Accurate drawings have to be made of these parts showing exact dimensions. Other important information about the part such as type of finish, kind of metal, and how it is to be heat treated is included on the drawing.

The projects in this unit are tools which can be made in the school metal shop.

1688

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS	
		*2.13	Covering exposed interior lights
		.14	Turning off motor
3.	Meet with beat officer	3.1	Inspecting assigned patrol car when obtained from beat officer (See Appendix 15)
		.2	Recording pertinent information regarding patrol car
4.	Relieve the beat officer	4.1	Signalling "In Service" to dispatcher
	RECONNAISANCE PATROL		
5.	Proceed to area to be reconnoitered	5.1	Selecting area (Varying avenue of approach and exit)
6.	Reconnoiter the area	6.1	Driving in lane offering best view
7.	Talk with sources of information	7.1	Alighting from patrol car
8.	Observe persons, places, and things	8.1	Realizing that effectiveness of senses is impaired during vehicle operation
	STANDARD PATROL		
9.	Proceed to location to be inspected	9.1	Driving slowly, safely, and courteously in lane offering best view
		.2	Obeying all traffic laws
		.3	Avoid starting a caravan
		.4	Using rear view mirrors
		.5	Reducing speed at all intersections
		.6	Watching for traffic violations, criminal offenses, and suspicious vehicles
		.7	Anticipating and being ready for the unusual or unexpected
		.8	Using peripheral vision
		.9	Looking down side streets and between buildings

16909

243 OF 327

ED

056 238

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

STEPS	KEY POINTS
	.10 Looking for traffic hazards before taking eyes off roadway
	.11 Checking buildings in the distance from roof down to street level
	.12 Being aware of changes in trafficways
	.13 Parking occasionally to observe
	.14 Alighting from patrol car
	.15 Avoiding surveillance by others
	*.16 Using high beams on headlights when traffic conditions permit
	*.17 Avoiding unnecessary and improper use of spot light
	*.18 Using spot light in short flashes
	*.19 "Sweeping" with spot light when complete coverage required
	.20 Reducing speed when using spot light and observing
	.21 Handling pending assignments to gather information and/or complete disposition of complaint
	.22 Handling problems as they occur:
	.1 Within jurisdiction and capabilities
	.2 Requesting departmental assistance from supervisor or dispatcher when necessary
	.3 Criminal, traffic, juvenile, and special requests in that order
	.23 Recording time, location and reason for patrol interruption
	.24 Telephone service should be available at location of interruption
	.25 Varying time and location of personal breaks and meal period
	.26 Practicing techniques of observation
	.27 Covering beat as often as possible until time of relief
10. Patrol on foot	10.1 Making all inspections
	.2 Improving observations
	.1 Talking with sources of information
	.2 Interrogating suspicious persons

243

16910

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
	10.3 Selecting safe location to park patrol car
	.4 Parking near outdoor public telephone
	.5 Parking properly
	.6 Signalling "Out of Car", location, and reason to dispatcher
	.7 Notifying dispatcher of telephone number:
	.1 Keeping unit available for assignment
	.8 Waiting for clearance from dispatcher before leaving patrol car
	.9 Recording time "out of" and "back in" service, location, and reason
	.10 Removing patrol car keys from ignition
	.11 Taking required equipment when leaving patrol car
	.12 Opening patrol car door and alighting with caution
	.13 Closing patrol car door quietly, carefully, and safely
	.14 Locking patrol car
	.15 Signalling "Back in Car" to dispatcher
11. Stop selected moving vehicles	11.1 To interrogate occupants
	.2 To check contents or search vehicle
	.3 Selecting vehicles that are unusual:
	.1 To area
	.2 To beat:
	.1 Location in which driven
	.2 Time at which driven
	.3 Manner in which driven
	.4 Length or number of times observed in area
	.5 Altered or absence of required identification
	.6 Neglected care or condition
	.3 To occupants
	.4 To contents

16911

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
	11.4 Recording license number on patrol car desk pad before taking any action
	.5 Checking license number against wanted vehicle list
	.6 File checking license number with dispatcher
	.7 Requesting departmental assistance from dispatcher:
	.1 Notifying dispatcher of pursuit and route
	.2 Using beacon and siren during pursuit
	*.8 Selecting parking place for stop--well lighted at night
	.9 Avoiding busy location
	.10 Watching for discarding of weapons or evidence
	.11 Noting possible avenues of escape open to occupants
	.12 Driving patrol car to the left of and about two feet behind driver of selected vehicle
	.13 Turning on emergency beacon light
	.14 Attracting driver's attention with series of short horn signals
	*.15 Attracting driver's attention by flashing or sweeping spotlight or flashlight across mirrors at night
	*.16 Avoid blinding driver
	.17 Using siren as last resort
	.18 Ordering driver where to stop and park in loud clear voice
	.19 Using hand signals to designate correct stopping place
	.20 Avoid "overshooting" vehicle
	.21 Keeping alert to erratic movement of vehicle
	.22 Falling in behind vehicle to be stopped
	.23 Maintaining assured clear distance

 16912

STEPS		KEY POINTS
	11.24	Parking vehicles out of traffic lanes
	.25	Stopping and parking 8 to 15 feet behind vehicle and about 2 feet to the left
	*.26	Turning on left and right spotlights
	.27	Notifying dispatcher of vehicle stop, description of vehicle, location of, and reason for stop
	.28	Watching occupants and interior of vehicle through rear and side windows
	.29	Keeping alert for any quick or furtive movements by occupants
	.30	Paying particular attention to hands and shoulders of occupants
	.31	Looking in rear view mirrors for approaching traffic
	.32	Unfastening revolver holster flap
	.33	Taking required equipment
	*.34	Carrying flashlight in weak hand
	.35	Alighting from patrol car after receiving reply on file check and clearance from dispatcher--with caution
	.36	Approaching vehicle from left side--slowly and carefully
	.37	Using caution when passing vehicle's blind spot
	.38	Stopping at the rear of the vehicle's front door
	.39	Keeping back to approaching traffic when one occupant only
	.40	Facing side of vehicle when front and and rear seats occupied
12. Search selected vehicles	12.1	Selecting vehicles:
	.1	Wanted in connection with a crime
	.2	Similar in description to wanted vehicles
	.3	With indications of having been used in crime

16913

STEPS	KEY POINTS
	12.1.4 Having suspicious occupants
	.5 As a result of questioning occupants
	.2 Arresting occupants first
	.3 Requesting permission of driver, if no arrest made
	.4 Checking contents or gathering evidence
	.5 Notifying dispatcher of location of wanted vehicle
	.6 Verifying identification of wanted vehicle with dispatcher
	.7 Requesting dispatcher to:
	.1 Notify responsible investigating officer of find
	.2 Ascertain further instructions regarding disposition
	.8 Requesting departmental assistance from dispatcher if:
	.1 Any occupant is wanted for or suspected of a felony
	.2 Any occupant is known or suspected of being armed or dangerous
	.3 Vehicle is occupied and is to be searched in the field
	.9 Removing all occupants
	.10 Watching for approaching traffic
	.11 Requesting or ordering driver to get out first--slowly
	.12 Keeping out of range of open door
	.13 Keeping driver between officer and occupants until all have alighted from vehicle
	.14 Selecting and moving to safe position on right side of vehicle
	.15 Walking behind vehicle
	.16 Requesting or ordering passengers to get out right side of vehicle in following order: right front seat, right rear seat, and left rear seat

 16914

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS	
	12.17	Watching passengers to prevent discarding of evidence
	.18	Having passengers face away from officer
	.19	Keeping passengers in view at all times and away from vehicle
	*.20	Re-aiming right spot light on occupants
	.21	Standing outside of spot light beam behind opened right front door of patrol car
	.22	Examining every part of vehicle, systematically
	.23	Searching left then right side of vehicle, front to rear and back again
	.24	Searching logical places
	.25	Avoid unnecessarily damaging vehicle or contents
	.26	Collecting all evidence and items of value as law enforcement intelligence
	.27	Looking for objects foreign to occupants or vehicle
	.28	Calling the attention of witnessing officer to found evidence
	.29	Recording:
	.1	Description of evidence
	.2	Circumstances under which found
	.3	Name of witnessing officer
	.30	Avoid overlooking any possible hiding place
13. Stop selected pedestrians	13.1	Those wanted or suspicious persons
	*.2	Selecting well lighted location for stop at night
	.3	Avoid busy locations
	.4	Noting possible avenues of escape
	.5	Approaching pedestrian from the rear
	*.6	Stopping patrol car at slight angle to curb to illuminate area

16915

STEPS		KEY POINTS
	13.7	Avoid violating traffic law
	.8	Avoid "overshooting" pedestrian
	*.9	Stopping ahead of pedestrian when approaching from front making certain he cannot pass patrol car before officer alights
	.10	Unfastening revolver holster flap
	.11	Watching for any quick or furtive movements when alighting from patrol car
	.12	Paying particular attention to pedestrian's hands
14. Inspect unoccupied homes	14.1	Temporarily unoccupied
	.2	Upon request
	.3	Removing evidence of non-occupancy
	.4	Completing Unoccupied Home Report (See Appendix 16)

OFF DUTY RELIEF

15. Proceed to watch relief point	15.1	Notifying relief officer of designated location
16. Meet with beat officer	16.1	Recording ending mileage
	.2	Removing all personal equipment
	.3	Notifying relief officer of any damage or desired repairs to patrol car and shortage of auxiliary equipment
	.4	Turning patrol car over to relief officer
	.5	Signalling "Out of Service" to dispatcher when patrol car not turned over to relief officer
	.6	Signalling "Off Duty" to dispatcher when patrol car turned over to relief officer
17. Proceed to headquarters	17.1	Turning in patrol car at garage

16916

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS	
18. Complete required reports	:	18.1	Turning in found property and evidence to property officer
	:	.2	Completing Property Tag (See Appendix 17)

16917

How To Make Blueprints:

1. Paper--Blueprint paper is white paper coated with a mixture of two chemicals that are sensitive to light. They are:

   Iron Citrate of Ammonia

   Ferricyanide of Potassium

   Blueprint paper comes in rolls of 10 to 50 yards each, and in widths of 24", 36", and up.

2. Printing--The blueprint is made from a tracing which is a drawing made on tracing cloth or tracing paper. The tracing is placed in a frame or a blueprinting machine with the lined side against the glass. A piece of blueprint paper is placed with its sensitive side next to the tracing. The hinged back is then placed in the frame and clamped by means of the spring clamps. The print is then exposed to the sunlight for approximately 1½ minutes, depending upon the condition of the weather and the time of year.

3. Washing--After being correctly exposed the print is then washed thoroughly in clear water and hung up to dry.

4. Drying--If prints are allowed to come in contact with any surface that is not perfectly clean they will become stained and their appearance ruined. Ammonia, soap or cleaning powder of any kind will bleach prints and cause spots. Care should be taken that none of these things are in the trays or sinks used for washing prints. Blueprints may be immersed in a Potassium Bichromate solution which has the property of making the colors more distinct.

Training Procedure No. 4

MISDEMEANORS WITNESSED BY OFFICER, HANDLING

INTRODUCTORY INFORMATION:

There are a great many laws regulating a person's behavior. Violation of these laws, in the majority of instances, constitutes a misdemeanor. Because these laws tend to regulate behavior they present a constant challenge to an officer's judgement and analyzing ability. The perpetration of a misdemeanor knows no social status. Persons on any rung of the social ladder may inadvertantly or deliberately commit an offense.

Community security is almost entirely dependent upon officers assigned to the area. Witnessing an offense and the subsequent proper handling by the officer serves the community and officer to the best advantage. Anything an officer does legally to deter offenses will certainly receive the approval of the public and the officer's supervisors.

EQUIPMENT NEEDED:

- Bags, Evidence
- Camera Kit
  - Bulbs, Flash
  - Camera
  - Film
  - Flash Unit (battery condenser type)
- Citation Book
- Clipboard
- Compass, Magnetic
- Crayon, Marking (lumber yellow)
- Form, Preliminary Investigation Field Report
- Handcuffs
- Knife, Pocket
- Notebook, Pocket
- Paper, Graph
- Pen, Ball Point
- Pencil, Mechanical
- Ruler, Architects'
- Tags, Evidence
- Tape Measure, 100 ft. Metal Reinforced Cloth
- Tape Measure, 10 ft. Spring Steel (white surface)

GENERAL SAFETY PRACTICES:

Be calm
Under all circumstances, notify dispatcher of location before leaving patrol car
Be constantly alert for potential personal hazards
Smoking should be avoided
Be certain you understand and are understood

16918

Training Procedure No. 4

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
1. Witness the misdemeanor	1.1 Using the senses
	.2 Recognizing the elements that constitute the offense
	.3 Noting general identification characteristics of perpetrator
	.4 Noting time, place, and other witnesses
	.5 Requesting, when possible, other witnesses to remain
2. Apprehend perpetrator	2.1 As soon as practical
	.2 Approaching with caution
	.3 Keeping arrestee away from strong hand side
	.4 Speaking clearly
	.5 Commanding, "Don't move!"
	.6 Ordering perpetrator to move only as told
	.7 Informing, "You are under arrest!"
	.8 Preventing violence
	.9 Using only that amount of force necessary to overcome resistance
	.10 Using special care with women, juveniles, and mentally ill
	.11 Noting what is said by arrestee
	.12 Answering inquiries courteously and concisely
3. Identify arrestee	3.1 Being certain it is same person that committed the offense
	.2 Noting particular identification characteristics:
	.1 Clothing worn
	.2 Body features
	.3 Speech
	.4 Mannerisms
	.3 Requesting arrestee pronounce and spell name and give present address
	.4 Requesting or searching for identification documents

16919

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
	3.5 When requesting, accept only identification documents
	.6 Checking verbal information against document
	.7 Noting discrepencies
	.8 Questioning arrestee further, depending on answers given
4. Issue citation (If not arresting)	4.1 According to departmental policy
	.2 When reasonably certain perpetrator will appear
	.3 Filling out form while standing in a safe location
	.4 Using prescribed form (See Appendix 18)
	.5 Establishing time and date mutually agreeable, for court, officer, and perpetrator, when possible
	.6 Printing information legibly
	.7 Rechecking information on citation for accuracy
	.8 Handing citation and all documents to the perpetrator
	.9 Asking perpetrator if information on citation is understood clearly
	.10 Having perpetrator sign citation
5. Secure arrestee	5.1 Handcuffing hands behind back, palms out, key holes up, double lock pins away from arrestee
	.2 Handcuffing to fixed object
	.3 Assuring arrestee that his rights will be protected
	.4 Keeping all unauthorized persons away
	.5 Preventing arrestee from injuring himself or others
	.6 Preventing others from injuring arrestee
	.7 Isolating arrestee from exits, when possible

16920

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS	
	5.8	Refusing requests of arrestee and/or persons wishing to see or speak to him at the scene
6. Search arrestee	6.1	After arrest
	.2	After handcuffing
	.3	Informing arrestee that search will be made
	.4	Isolating searcher and arrestee
	.5	Adhering strictly to laws of search for weapons and evidence
	.6	For safety
	.7	Using spread-eagle method
	.8	Removing all metal objects that may be potential weapons
	.9	Completing bodily search even though weapon or evidence found
	.10	Using female officer or trusted adult woman on females
	.11	Calling for assistance, when necessary
7. Gather evidence	7.1	To legally substantiate facts
	.2	Completing Preliminary Investigation Field Report (See Appendix 19)
	.3	Before or after removal of arrestee, as appropriate
	.4	Contacting other witnesses for:
	.1	Name
	.2	Address
	.3	Information about offense
	.4	Availability to testify
	.5	Searching scene systematically
	.6	Observing minutest detail
	.7	Including area adjacent to crime scene
	.8	Collecting sufficient amount of specimens for scientific examination
	.9	Placing in appropriate containers

16921

STEPS		KEY POINTS
	7.10	Avoiding contamination by using separate containers
	.11	Recording description and location found
	.12	Recording names and addresses of persons having knowledge or possession of evidence
	.13	Initialing in suitable place on evidence
	.14	Avoiding damage for scientific examination
8. Remove arrestee from scene	8.1	Taking to jail
	.2	Walking to jail, if practical
	.3	Calling supervisor to arrange for transportation
	.4	In patrol car or patrol wagon
	.5	Removing high or spiked heel shoes from females
	.6	Refusing requests for unauthorized means of transportation
	.7	Placing arrestee on front seat, when alone and without screen
	.8	Placing arrestee on rear seat, if screen provided
	.9	Locking doors
	.10	Refusing requests to smoke, get out of or change positions in patrol vehicle
	.11	Noting statements made by arrestee, for later recording
	.12	Keeping constantly alert against personal attack
9. Process arrestee	9.1	Upon arrival at jail
	.2	Consigning arrestee to jailer
	.3	Furnishing necessary information
	.4	Assisting or filling in all forms as required
	.5	Removing handcuffs where and when designated

16922

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
	9.6 Keeping constantly alert against attack or escape
10. Submit evidence	10.1 Maintaining legal chain
	.2 To property officer
	.3 Filling in forms as required
	.4 Recording:
	.1 Time
	.2 Property officer's name and number
	.3 Location stored
11. Submit reports	11.1 To supervisor
	.2 To complete disposition
	.3 Before going off duty
	.4 For department information
	.5 For use in prosecution
	.6 Using Preliminary Investigation Field Report form (See Appendix 20)
	.7 Typed
	.8 Referring to notes
	.9 Including who-what-why-when-where-and how (See Appendix 21)
	.10 Spelling correctly
	.11 Choosing words carefully
	.12 Avoiding legalistic words, phrases, or slang
	.13 Being objective in information
	.14 Using only widely accepted abbreviations
	.15 Using quotation marks for exact words spoken or written by persons
	.16 Reviewing and editing the report before submitting

16923

MISDEMEANOR NOT WITNESSED BY OFFICER, HANDLING

INTRODUCTORY INFORMATION:

Three major considerations must be given to the handling of any criminal law violation. First, the law must be complied with; second, that the departmental regulations be adhered to; and third, that a disposition which is satisfactory, within the above requirements, to the complainant be achieved.

There are many times, when an offense is committed, that the complainant will desire or demand that action be taken by the officer. But, because of the type of offense the officer will be unable to act due to the requirements of the law. It is difficult to convince the complainant under such circumstances that there is nothing the officer can do to enforce the law.

Most law enforcement departments are operating under the handicaps of manpower shortage and excessive case and work loads. Departmental regulations which limit the extent of handling in certain cases are a justifiable result of such handicaps.

The complainant, on the other hand, still has a problem which is of the utmost concern and has sought the assistance of the officer in solving the problem. A satisfactory disposition still may be achieved, even though the officer is limited by law and departmental regulations, by performing the proper handling procedure.

EQUIPMENT NEEDED:

- Bags, Evidence
- Camera Kit:
  - Bulbs, Flash
  - Camera
  - Film
  - Flash Unit (battery condenser type)
- Citation Book
- Clipboard
- Compass, Magnetic
- Crayon, Marking, (lumber yellow)
- Form, Persons Report
- Form, Preliminary Investigation Report
- Handcuffs
- Knife, Pocket
- Notebook, Pocket
- Paper, Graph
- Pen, Ball Point
- Pencil, Mechanical
- Ruler, Architects'
- Tags, Evidence
- Tape Measure, 100 ft. Metal Reinforced Cloth
- Tape Measure, 10 ft. Spring Steel (white surface)

16924

Training Procedure No. 5

LAW ENFORCEMENT OFFICER TRAINING

GENERAL SAFETY PRACTICES:

Be calm
Notify dispatcher of location, before leaving patrol car, under all circumstances
Be constantly alert for potential personal hazards
Smoking should be avoided

STEPS	KEY POINTS
1. Receive assignment and information	1.1 From dispatcher
	.2 From citizen, notifying dispatcher
	.3 Recording on Patrol Car desk pad:
	.1 Time received
	.2 Location of scene
	.3 Type of crime
	.4 Person to be contacted and/or complainant and address
	.4 Repeating location to dispatcher
	.5 Stopping patrol car before writing
	.6 Requesting verification for accuracy
2. Proceed to scene	2.1 Driving safely
	.2 Immediately, unless otherwise instructed
	.3 Using extreme caution when disobeying traffic laws
	.4 Avoiding use of red light and siren unless otherwise instructed
3. Arrive at scene	3.1 Parking properly
	.2 Notifying dispatcher of exact location
	.3 Signaling dispatcher "out-of-service"
	.4 Removing ignition key
	.5 Recording time of arrival
	.6 Taking required equipment
	.7 Alighting from patrol car with caution
	.8 Locking patrol car
	.9 Entering all premises with caution
	.10 Approaching all persons and things with caution
4. Observe scene and situation	4.1 To determine course of action
	.2 Selecting safe location for officer

16925

STEPS		KEY POINTS
	4.3	Scanning persons present for weapons
	.4	Scanning area for potential weapons
	.5	Physical and mental condition of persons involved
	.6	Mood and state of by-standers
	.7	Being alert to conversations
	.8	For future information
5. Preserve the peace	5.1	To prevent violence
	.2	Requesting or ordering all concerned to desist
	.3	Separating combatants
	.4	Quieting or calming persons present
	.5	Removing or isolating complainant and perpetrator
	.6	Calling for assistance when necessary
	.7	Requesting assistance of persons present
6. Identify participants	6.1	Complainant
	.2	Victim
	.3	Perpetrator
	.4	Witnesses
	.5	To assist in gathering facts
	.6	Directing questions
	.7	Observing which persons seem most concerned
	.8	Listening to conversations
	.9	Requesting complainant to identify perpetrator
	.10	Requesting complainant and/or perpetrator to identify witnesses so by-standers may be dismissed from scene
	.11	Requesting perpetrator to identify himself
	.12	Recording names, addresses and telephone numbers
	.13	Gathering information about perpetrator, if not at scene

16926

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS	
7. Interview participants	:	7.1	Getting all sides of the story
	:	.2	Determining if necessary elements of offense are present
	:	.3	Allowing each to give his own version uninterrupted
	:	.4	Being impartial
	:	.5	Requesting witnesses to remain
	:	.6	Requesting witnesses not discuss the case with each other
	:	.7	Separating and interviewing each person concerned
	:	.8	Recording pertinent information in pocket notebook or on appropriate form
	:	.9	Determining if complainant or victim will initiate steps for prosecution
8. Inform persons involved	:	8.1	Complainant
	:	.2	Victim
	:	.3	Perpetrator
	:	.4	Witnesses
	:	.5	Complainant or victim of necessary elements to prove offense
	:	.6	Informing all persons involved to appear before magistrate at court of jurisdiction and venue
	:	.7	Informing complainant or victim of location for signing affidavit for warrant
	:	.8	Informing witnesses what will be expected of them
	:	.9	Recording names, addresses and telephone numbers of persons for possible court action
	:	.10	Answering other questions of involved persons

COMPLETE FOLLOWING STEPS IF PROSECUTION WILL RESULT

9. Preserve scene	:	9.1	Guarding scene at all times
	:	.2	Removing all persons

16927

5. Pressing—When dry, prints should be either ironed out with a hot flatiron, or pressed under a weight to make them smooth and straight. Small prints may be stretched by drawing them over the edge of a table or the edge of a ruler. They may also be pressed by clamping them in the printing frame.
6. Trimming—When the prints have been dried and pressed, they should be trimmed with large shears or on a trimming board, so that they will have uniform margins and straight edges.

STEPS	KEY POINTS	
	9.3	Staying out of scene as much as possible
	.4	Roping off or locking-up
	.5	Keeping unauthorized persons away
	.6	Keeping everything in place
	.7	Determining if crime scene has been altered
	.8	Checking with person who knows crime scene intimately
	.9	Calling for assistance, when necessary
10. Photograph scene	10.1	As soon as possible
	.2	Getting over-all view first without altering scene
	.3	Taking over-all view with identification
	.4	Taking pictures of physical evidence without identification
	.5	Taking pictures of physical evidence with identification
	.6	Recording photographic data:
	.1	Type of camera
	.2	Lens opening
	.3	Shutter speed
	.4	Type of film
	.5	Accessories used
	.6	Time taken
	.7	Location of camera for each photograph
11. Sketch scene	11.1	Locating the position of pertinent items
	.2	Providing a permanent record to supplement word description
	.3	Using Field Sketch Sheet (See Appendix 10)
	.4	Obtaining general impression of scene before starting sketch
	.5	Locating north at top of sketch
	.6	Using magnetic compass to determine north
	.7	Determining fixed base line or fixed points

16928

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
	11.8 Determining what is to be included
	.9 Determining scale used
	.10 Determining when in the investigation sketch should be made
	.11 Recording on sketch:
	.1 Brief descriptive statement
	.2 Address or location
	.3 Type of offense
	.4 Case number
	.5 Scale used
	.6 Arrow indicating north
	.7 Name of person making sketch
	.8 Legend
	.9 Names of persons assisting with measurements
	.10 Date sketch
	.12 Measuring accurately
	.13 Using rectangular coordinates or triangulation from fixed points for locating items on sketch
	.14 Using the words "feet" and "inches" in recording distance in notebook
	.15 Confirming all measurements
	.16 Including all details pertinent to offense
	.17 Using standard symbols when possible
12. Gather evidence	12.1 Substantiating facts
	.2 Searching systematically, clockwise
	.3 Observing minutest detail
	.4 Including area adjacent to crime scene
	.5 Carefully
	.6 Handling as little as possible
	.7 Collecting sufficent amount of specimens for scientific examination
	.8 Avoiding contamination by using separate containers
	.9 Placing in proper containers
	.10 Recording its location
	.11 Recording description

16929

STEPS		KEY POINTS
	12.12	Recording names and addresses of persons having knowledge or possession of evidence
13. Mark evidence	13.1	For future identification
	.2	Initialing in suitable location
	.3	Using metal scribe, pen, tag, tape, as appropriate
	.4	Avoiding damage for scientific examination
	.5	Recording in notes where and how marked
14. Preserve evidence	14.1	Keeping in personal possession
	.2	Preventing loss, damage, removal
	.3	Releasing only to proper authority
	.4	Handling with gloves, when appropriate
	.5	Allowing natural drying of wet items
	.6	Using appropriate containers
15. Follow-up	15.1	Completing unfinished details
	.2	Locating and arresting perpetrator after warrant issued
	.3	Recovering property
	.4	Gathering additional facts
	.5	Leads furnished or discovered
16. Book evidence	16.1	Maintaining legal chain of evidence
	.2	Turning over to authorized officer
	.3	Securing to avoid tampering
	.4	Receiving receipt
	.5	Recording location
	.6	Recording names of all persons handling
17. Submit report (See Appendix N)	17.1	After step 8 - if no prosecution
	.2	As required
	.3	Completing disposition
	.4	Before going off duty
	.5	For department information

16930

STEPS		KEY POINTS
	17.6	For use in prosecution
	.7	Using prescribed form
	.8	Typed
	.9	Referring to notes
	.10	Including who-what-why-when-where and how
	.11	Spelling correctly
	.12	Choosing words carefully
	.13	Avoiding legalistic words or phrases and slang
	.14	Being objective in information
	.15	Using only widely accepted abbreviations
	.16	Reviewing and editing the report before submitting

 16931

FELONIES, HANDLING

INTRODUCTORY INFORMATION:

The beat officer has many splendid opportunities to render service to the public, but none so impresses the members of a community with the efficiency of the officer and the department as the investigation and apprehension of a felon. The building of a solid case, getting and checking out leads, and concluding with the perpetrator's apprehension is viewed with awe and pride when the citizen originally thought the case was unsolvable due to the apparent lack of clues and facts.

The officer who knows how to perform his duties in a quiet, efficient, and professional-like manner inspires the confidence of the public in law enforcement, ultimately acquiring the community's backing in the further prevention of crime and increasing sources of information.

EQUIPMENT NEEDED:

- Bags, Evidence
- Clipboard
- Compass, Magnetic
- Containers. Evidence
- Crayon, Marking (yellow lumber)
- Forms:
  - Field Interrogation Report
  - Injured Prisoner Report
  - Preliminary Investigation Report
  - Prisoner's Property Receipt
  - Property Tag
  - Format for Statement (Sample, Appendix 20)
- Handcuffs
- Knife, Pocket
- Paper, Graph
- Pen, Ball Point (black)
- Pen, Ball Point (red)
- Pencil, Mechanical
- Ruler, 12"
- Tape, 100 ft. Metal Reinforced Cloth Measuring
- Tape, 10 ft. Spring Steel Measuring (White surface)

GENERAL SAFETY PRACTICES

Consider every felon as armed and dangerous
Always keep arrestee in view
Keep arrestee away from officer's strong hand side
Be certain that you understand and are understood
Refuse all of arrestee's requests in the field
Be constantly alert for personal hazards
Notify dispatcher of any change in location

16932

Training Procedure No. 6

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
1. Receive assignment and information	1.1 From dispatcher
	.2 Acknowledging initial call immediately
	.3 Identifying unit and giving location
	.4 From citizen, notifying dispatcher
	.5 Stopping patrol car before writing
	.6 Recording on patrol car desk pad:
	.1 Location of scene
	.2 Type of crime
	.3 Person to be contacted and/or complainant and address
	.4 Description of perpetrator and his vehicle
	.7 Noting:
	.1 Situation at scene
	.2 Actual or potential hazards to persons involved
	.3 Type of weapon used by perpetrator
	.4 Route of escape of perpetrator
	.8 Requesting:
	.1 Additional required information
	.2 Departmental assistance
	.9 Notifying dispatcher of personal knowledge
	.10 Repeating location of scene for verification by dispatcher
	.11 Acknowledging receipt of transmission
2. Proceed to scene	2.1 Immediately
	.2 Driving safely
	.3 Using extreme caution when disobeying traffic laws
	.4 Avoid using beacon light and siren, unless otherwise instructed
	.5 Using most expeditious route
	.6 Considering the perpetrator's route of escape
	.7 Watching for the perpetrator and/or his vehicle
	.8 Considering the possibility of error and/or change

16933

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
	2.9 Participating in department's tactical operations
	.10 Planning personal operations based on known information
	.11 Turning off beacon light and/or siren
3. Arrive at scene	3.1 Parking properly
	.2 Signalling dispatcher "out-of-service"
	.3 Giving dispatcher exact location
	.4 Recording time of arrival
	.5 Removing ignition key
	.6 Taking required equipment
	.7 Unfastening holster flap
	.8 Alighting from patrol car with caution
	.9 Locking patrol car
	.10 Entering all premises with caution
	.11 Approaching all persons and things with caution
	.12 Selecting location for personal safety

PRELIMINARY INVESTIGATION - PRIMARY PHASE

4. Observe scene and situation	4.1 Appearing and keeping calm
	.2 Gathering information to determine:
	.1 Personal safety
	.2 Participants' safety
	.3 Security of perpetrator
	.4 Course of action
	.3 Noting:
	.1 Mood and state of assembly
	.2 Physical and mental condition of participants
	.4 Scanning:
	.1 Assembly for weapons
	.2 Area for potential weapons

STEPS	KEY POINTS
	4.4.3 Possible escape routes for perpetrator
	.5 Being alert to conversations
	.6 Fastening holster flap
5. Preserve the peace	5.1 Preventing violence and/or further injury
	.2 Performing duties objectively
	.3 Requesting or ordering all concerned to stop
	.4 Separating combatants
	.5 Quieting or calming persons present
	.6 Requesting bystanders to leave
	.7 Handling other situations as they arise
	.8 Removing or isolating victim and perpetrator
	.9 Calling for assistance when necessary
	.10 Requesting assistance of persons present
6. Care for injured	6.1 As soon as possible
	.2 Requesting citizen to summon appropriate assistance
	.3 Rendering appropriate first aid
	.4 Requesting citizen to stand by injured
	.5 Arranging for transportation to medical facility
7. Identify participants	7.1 By:
	.1 Observing which persons seem most concerned
	.2 Listening to conversations
	.2 Contacting personally:
	.1 Victim
	.2 Perpetrator
	.3 Complainant
	.4 Witnesses
	.3 Requesting:
	.1 Victim to identify perpetrator and witnesses
	.2 Perpetrator to identity himself

16935

STEPS	KEY POINTS
	7.3.3 Witnesses to identify themselves, victim, and perpetrator
	.4 Witnesses to remain near the scene at location designated
	.5 Witnesses not to discuss matter under investigation
	.6 Bystanders to leave
8. Preserve crime scene	8.1 Removing and keeping all persons away from scene
	.2 Guarding scene at all times
	.3 Placing civilians at approaches
	.4 Roping off or locking up
	.5 Permitting access to authorized persons only
	.6 Keeping everything in place
	.7 Determining if crime scene has been altered
	.8 Checking with person who knows crime scene intimately
	.9 Requesting departmental assistance
9. Interview participants	9.1 Establishing elements of offense
	.2 Getting accurate information
	.3 Separately:
	.1 Victim
	.2 Perpetrator
	.3 Complainant
	.4 Witnesses
	.4 Recording:
	.1 Name - first, middle initial, and last
	.2 Race
	.3 Sex
	.4 Age
	.5 Occupation
	.6 Addresses of home and place of employment
	.7 Telephone number of home and place of employment

16936

STEPS	KEY POINTS
	9.5 Allowing participants to tell, uninterrupted, own version of event
	.6 Asking as few questions as possible
	.7 Completing Preliminary Investigation Field Report (See Appendix 19)
	.8 Recording statements (See Appendix 20)
	.9 Use abbreviations(See Appendix 25)
	.10 Describing perpetrator's method of operation:
	.1 What he did and said
	.2 How he did it and said it
	.11 Describing perpetrator:
	.1 Name - including aliases
	.2 Color
	.3 Nationality
	.4 Sex
	.5 Age
	.6 Height
	.7 Weight
	.8 Build
	.9 Hair - Color, amount, type, and manner of wearing
	.10 Eyes, including glasses - type and color
	.11 Beard, including mustache - color, amount, type and manner of wearing
	.12 Complexion - color and appearance
	.13 Physical deformities, disfigurations, and their effects
	.12 Remembering perpetrator may be simulating or feigning physical condition and appearance
	.13 Describing clothing:
	.1 Headdress - type, color, material, and manner worn
	.2 Disguise - facial and other
	.3 Shirt - type, color and material
	.4 Neckwear - type, color, material and manner worn

16937

BOTTLE OPENER
W.S. .60

COLD CHISEL
W.S. 61

MACHINISTS PUNCH
W.S. 62

SCREW DRIVER
W.S. .63

ILLUSTRATION SHEET 31.

STEPS	KEY POINTS
	9.13.5 Overcoat - type, color, and material
	.6 Outer garment - type, color, and material
	.7 Gloves - type, color, and material
	.8 Jewelry - type, color, and metal
	.9 Trousers - type, color, and material
	.10 Socks - type, color, and material
	.11 Footwear - type, color, and material
	.14 Remembering perpetrator may discard or change clothes
	.15 Describing perpetrator's vehicle:
	.1 Color - from top to bottom
	.2 Year
	.3 Manufacturer
	.4 Body type
	.5 License number - including state
	.6 Accessories
	.7 Distinguishing features - including stickers
	.16 Remembering vehicle or license plates may be stolen, borrowed, or altered
	.17 Describing weapon used:
	.1 Color
	.2 Metal
	.3 Make
	.4 Type
	.5 Caliber
	.6 Distinguishing features
	.18 Remembering it may be a toy
	.19 Describing loot:
	.1 Total value
	.2 Quantity of each item
	.3 Each item, going from major categories to specific items
	.20 Describing route of escape

16938

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS	
SUPPLEMENTAL STEPS FOR COLD CASES		
10.a. Request departmental assistance	10.a.1	Through supervisor
	.2	Keeping out of hearing distance of participants
	.3	Using radio or telephone
	.4	Identifying yourself
	.5	Giving exact location
	.6	Indicating type of assistance needed
	.7	Giving a summary of the case and what physical evidence is known and/or believed to be present
	.8	Answering questions
	.9	Identifying statements which are opinions
	.10	Notifying other law enforcement agencies, as ordered
b. Turn-over investigation	b.1	Upon arrival of:
	.1	Criminal investigator and/or physical evidence technician
	.2	Keeping out of hearing distance of participants
	.3	Briefing investigator or technician
	.4	Introducing and identifying investigator to participants
	.5	Assisting as requested
SUPPLEMENTAL STEPS FOR HOT CASES (The following steps and key points on Hot Cases are preceded by Steps 1 through 9)		
10.a. Notify dispatcher	10.a.1	Furnishing information from Preliminary Investigation Form
	.2	As soon as possible
	.3	Talking slowly and clearly
	.4	Using telephone, preferably
	.5	Stating exact offense committed and location

16939

STEPS	KEY POINTS
	10.a.6 Using phonetic alphabet in spelling (See Appendix 26)
	.7 Describing:
	.1 Perpetrator
	.2 Clothing
	.3 Vehicle
	.4 Weapon
	.5 Loot
	.6 Route of escape
	.8 Giving warning regarding officers' safety
	.9 Checking accurate reception of information by dispatcher
	.10 Checking that allied law enforcement agencies have been notified
b. Request departmental assistance	.b.1 As required
	.2 Through supervisor
	.3 Keeping out of hearing distance of participants
	.4 Using radio or telephone
	.5 Identifying yourself
	.6 Giving exact location
	.7 Indicating type of assistance needed
	.8 Giving a summary of the case and what physical evidence is known and/or believed to be present
	.9 Answering questions
	.10 Identifying statements which are opinions
	.11 Notifying other law enforcement agencies, as ordered
c. Turn-over investigation	.c.1 Upon arrival of:
	.1 Criminal investigator and/or physical evidence technician
	.2 Keeping out of hearing distance of participants
	.3 Briefing investigator or technician
	.4 Introducing and identifying investigator to participants
	.5 Assisting as requested

16940

STEPS		KEY POINTS
10.d. Pursue perpetrator	10.d.1	Within jurisdiction and capabilities
	.2	Following leads to their conclusion
	.3	Participating in intra-departmental tactical operations

SUPPLEMENTAL STEPS FOR PERPETRATOR IN CUSTODY OF CIVILIAN
(The following steps and key points on Perpetrator in Custody of Civilian are preceded by Steps 1 through 9)

10.a. Arrest Perpetrator	10.a.1	Stating reason
	.2	Taking into physical custody
	.3	Using only that amount of force necessary to overcome resistance
	.4	Always recording physical condition of perpetrator (See Appendix 24)
	.5	Recording mental condition
	.6	Bringing physical and mental condition to the attention of selected witnesses
	.7	Recording witnesses name
b. Secure arrestee	.b.1	Preventing escape
	.2	Isolating arrestee as soon as possible
	.3	Handcuffing hands behind back, palms out, key holes up, double lock pins away from arrestee
	.4	Handcuffing to fixed object
	.5	Preventing arrestee from injuring himself or others
	.6	Preventing others from injuring arrestee
	.7	Refusing arrestee's requests
	.8	Keeping in view
	.9	Staying at discreet distance
	.10	Blocking exits
	.11	Using civilian assistance
	.12	Keeping all unauthorized persons away
c. Search arrestee	.c.1	After handcuffing
	.2	For the safety of all concerned

16941

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS
	10.c.3	For weapons and/or evidence
	*.4	Choosing well lighted location at night
	.5	Choosing location away from people
	.6	Telling arrestee he will be searched
	.7	Using "spread-eagle" method
	.8	Methodically from head to toe
	.9	Using grasping motion of hand against garment and body
	.10	Feeling for objects, not patting
	.11	Removing all metal objects that may be potential weapons
	.12	Examining objects carefully to determine if converted to weapon
	.13	Noting and recording location where weapon or evidence was found
	.14	Completing body search even though one weapon found
	.15	Requesting departmental assistance
	.16	Using female officer or trusted adult woman for females
	.17	Providing security for female searcher
d. Request departmental assistance	.d.1	Through supervisor
	.2	Keeping out of hearing distance of participants
	.3	Using radio or telephone
	.4	Identifying yourself
	.5	Giving exact location
	.6	Indicating type of assistance needed
	.7	Giving a summary of the case and what physical evidence is known and/or believed to be present
	.8	Answering questions
	.9	Identifying statements which are opinions
	.10	Notifying other law enforcement agencies, as ordered
e. Turn-over investigation	.e.1	Upon arrival of:

16942

STEPS	KEY POINTS
	10.e.1.1 Criminal investigator and/or physical evidence technician
	.2 Keeping out of hearing distance of participants
	.3 Briefing investigator or technician
	.4 Introducing and identifying investigator to participants
	.5 Assisting as requested
CRIME SCENE INVESTIGATION (To be followed when not performed by criminal investigator or technician)	
11. Photograph scene	11.1 As soon as possible
	.2 To substantiate position and location of pertinent objects
	.3 Avoiding alteration of scene
	.4 Adding nothing to first photograph
	.5 Adding law enforcement agency's identification to second photograph
	.6 Picturing the initial appearance of evidence
	.7 Recording photographic data:
	.1 Type of camera
	.2 Type of lens
	.3 Shutter speed
	.4 Lens opening
	.5 Type of film
	.6 Time taken
	.7 Location of camera
	.8 Light condition
12. Sketch scene	12.1 To substantiate position and location of pertinent objects
	.2 Determining when it should be made in the course of the investigation
	.3 Obtaining a general impression before starting
	.4 Using Field Sketch Sheet and straightedge (See Appendix 10)
	.5 Locating directions with a magnetic compass

16943

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS	
		12.6	Determining scale to be used
		.7	Determining fixed base line or fixed points
		.8	Determining what must be included
		.9	Adding nothing superfluous
		.10	Making preliminary sketch in pencil, lightly
		.11	Using black ink
		.12	Identifying pertinent objects with letters in red ink
		.13	Measuring accurately
		.14	Using "feet" and "inches" to designate distances
		.15	Locating and indicating "North" at top of page
		.16	Recording information in lower right corner
13.	Search for physical evidence	13.1	According to laws governing search
		.2	To substantiate facts
		.3	Proving elements of the offense
		.4	Examining scene clockwise
		.5	Beginning with the perimeter
		.6	Proceeding spirally
		.7	Examining scene minutely
		.8	Completing one area before going to another
		.9	Examining adjacent area and route of approach
14.	Collect physical evidence	14.1	Carefully, with minimum handling
		.2	For preservation
		.3	Apprising witness(es) of find
		.4	Photographing where found
		.5	Recording description and location
		.6	Including it in sketch
		.7	Getting sufficient quantity of known sample
		.8	Giving receipt to owner for valuable property

16944

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS
15. Mark physical evidence	15.1	For future identification
	.2	Initialing and dating in suitable location avoiding damage for scientific examination
	.3	Using appropriate marking devise
	.4	Recording mark and location
	.5	Attaching completed evidence tag
	.6	Starting and maintaining the chain of evidence
16. Preserve physical evidence	16.1	Maintaining it in its original state
	.2	Keeping in personal possession
	.3	Packing in suitable container
	.4	Separating to prevent contamination
	.5	Preventing damage
	.6	Preventing excessive handling

PRELIMINARY INVESTIGATION - SECONDARY PHASE

17. Take written statements	17.1	From participants (See Appendix 20)
	.2	At suitable time and location
	.3	Using separate sheets for each and one side only
	.4	Using permanent writing material
	.5	Identifying with case number and person making statement
	.6	Chronologically
	.7	Have closing verification paragraph included
	.8	Having statement signed by:
	.1	Maker
	.2	Recorder
	.3	Witnesses
18. Transport arrestee	18.1	To appropriate confinement facility
	.2	Personally or by arrangement with supervisor
	.3	Using caution when placing in patrol car
	.4	Driving safely
	.5	Locking doors securely

16946

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
	18.6 Using most expeditious route
	.7 Maintaining alert for:
	.1 Personal attack
	.2 Escape attempt
	.8 Notifying dispatcher and recording starting and ending location and odometer reading for females
	.9 Recording starting and ending time
19. Process arrestee for confinement	19.1 As required by facility
	.2 Preparing documents
	.3 Having physician examine injured perpetrator
	.4 Completing Injured Prisoner Report form
	.5 Providing custodian with necessary information
	.6 Removing handcuffs from arrestee
	.7 Removing and giving custodian all personal property and potential weapons of arrestee
	.8 Verifying arrestee's property
	.9 Issuing receipt to arrestee for personal property taken as evidence
	.10 Obtaining receipt of confinement from custodian
	.11 Apprising custodian of arrestee's physical and/or mental condition
	.12 Recording confinement time, facility, and custodian
20. Submit evidence	20.1 To property officer
	.2 For safeguarding
	.3 Maintaining chain of evidence
	.4 Completing Property Tag form and receiving receipt (See Appendix 17)
	.5 Recording:
	.1 Time
	.2 Property officer's name and number
	.3 Location stored

16947

Training Procedure No. 6

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS	
21. Follow-up leads	:	21.1	As soon as possible
	:	.2	Within jurisdiction and capabilities
	:	.3	Gathering evidence
	:	.4	Interviewing informants
	:		
22. Submit reports	:	22.1	To supervisor
	:	.2	As required
	:	.3	To complete disposition
	:	.4	Before going off duty
	:	.5	For department's information
	:	.6	For use in prosecution
	:	.7	Completing Preliminary Investigation Report form (See Appendix 14)
	:	.8	Typing information
	:	.9	Referring to notes
	:	.10	Including who, what, why, when, where, and how
	:	.11	Spelling correctly
	:	.12	Choosing words carefully
	:	.13	Avoiding legalistic words, phrases, or slang
	:	.14	Being objective in information
	:	.15	Using only widely accepted abbreviations
	:	.16	Reviewing and editing the report before submitting
	:	.17	Attaching pertinent forms
	:		
23. Follow-up case	:	23.1	Transmitting known information to other interested law enforcement agencies
	:	.2	Requesting their assistance
	:	.3	Having physical evidence examined by the criminalistician
	:	.4	Checking available law enforcement agency records
	:	.5	Interviewing new sources of information
	:	.6	Contacting the victim personally at periodic intervals, informing him of developments

16948

Assignments

WS. 60. Bottle Opener: Study the pictorial drawing of the bottle opener on Illustration Sheet 31, page 107. Decide what views and dimensions will be needed to make a complete working drawing of the object. Make a freehand sketch of the bottle opener showing the necessary views and dimensions. Draw each view in its proper position. Have your instructor approve the sketch. Using instruments, make a working drawing of the bottle opener on a Work Sheet. Be sure to space views properly on the Work Sheet and do a neat job of dimensioning and lettering.

WS. 61. Cold Chisel: Refer to Illustration Sheet 31, page 107. Make a complete working drawing of the cold chisel, showing the necessary views and dimensions. Have your sketch approved by the instructor before you make the drawing with instruments. Study the construction of the octagon shown on Illustration Sheet 31, WS 61, and practice the drawing of an octagon with your drafting instruments on a piece of practice paper before making your instrument drawing.

WS. 62. Machinist's Punch: Refer to Illustration Sheet 31, page 107. Make a working drawing on tracing paper of the punch showing the necessary views and dimensions. Have your sketch approved by the instructor before making the drawing with instruments. Make a blueprint of your drawing if your instructor thinks the tracing is good enough to make a print. Refer to the information given on pages 104 and 105, on how to make a blueprint.

Training Procedure No. 7

TRAFFIC VIOLATIONS, HANDLING

INTRODUCTORY INFORMATION:

One of the most pressing problems facing the public and law enforcement agencies is finding additional ways and means of reducing deaths, injuries, and amount of property damage that are occurring daily on the nation's trafficways. Law enforcement officers contribute substantially towards this reduction when they detect, apprehend, and take enforcement action against the traffic law violator.

A great number of an officer's personal contacts with the public is due to the large number of traffic violations which must be handled. It is under these circumstances that an officer will affect the public image of the department and the service rendered, either favorably or unfavorably. An officer creates the best impression for the department by exhibiting exceptional judgement and conducting himself above reproach while handling the traffic violation.

EQUIPMENT NEEDED:

Citation Book
Pen, Ball Point
Pencil, Mechanical
Traffic Code Book

GENERAL SAFETY PRACTICES:

Notify dispatcher of location before leaving patrol car, under all circumstances
Be extremely cautious in pursuit driving
Use safety seat belt
Keep constantly alert for erratic movements of vehicle or person
Keep alert to moving traffic
Know the condition and limitation of patrol car

STEPS		KEY POINTS
1. Witness violation	1.1	Of driver
	.2	Recognizing elements of the offense
	.3	Determining action to be taken
	.4	Noting general identification characteristics of violator
	.5	Noting time and place

Note: Items identified by an asterisk pertain to nighttime only.

16949

Training Procedure No. 7

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS
	1.6	Noting vehicle make, year, model, color, license number, and any unusual appearance
2. Apprehend violator	2.1	As soon as practical
	.2	Being certain safety seat belt is fastened before pursuing
	.3	Moving into traffic safely
	.4	Pacing violator's vehicle properly on speed violations
	.5	Selecting location to stop violator
	*.6	Selecting well lighted location at night, when possible
	.7	Driving patrol car to the left of and two (2) feet behind driver
	.8	Be careful not to overshoot vehicle
	.9	Using second gear or low range in heavy traffic
	.10	Attracting driver's attention with short horn signals-daytime
	*.11	Flashing spotlight across inside and/or outside rearview mirror
	*.12	Avoid blinding driver
	.13	Keeping constantly alert for erratic vehicle movements
	.14	Using hand signals to designate selected stopping place
	.15	Falling in behind vehicle to be stopped
	.16	Maintaining assured clear distance
	.17	Using red beacon light and siren in high speed pursuit
	.18	Keeping dispatcher informed when pursuit is involved
	.19	Notifying dispatcher if assistance required
	.20	Watching for items that might be thrown from pursued vehicle
	.21	Parking patrol car about 8 to 15 feet behind and a little to the left of violator's vehicle

16950

STEPS		KEY POINTS
	2.22	Notifying dispatcher before leaving patrol car
	.23	Turning or leaving on red beacon light to warn motorists
	.24	Recording license number on car desk pad before alighting
	.25	Removing sunglasses
	.26	Unfastening holster flap
	.27	Approaching violator and vehicle with caution
	.28	Observing interior of violator's vehicle through rear and side windows
	.29	Noting occupants and contents
	.30	Noting escape routes
	.31	Noting available cover
3. Make identification	3.1	Taking a position to the rear of driver's door and out of range of other door for conversation
	.2	Keeping alert to occupant's movement
	*.3	Keeping flashlight beam out of occupants eyes
	.4	Greeting courteously using "Sir" or "Ma'am"
	.5	Requesting violator remain seated in the vehicle
	.6	Informing violator of reason for stopping
	.7	Using tone of voice indicating statement of fact
	.8	Asking for driver's license and vehicle registration
	.9	Accepting only requested documents
	.10	Examining documents for validity
	.11	Requesting verbal pronunciation, spelling of name, and present address
	.12	Addressing by proper title and name thereafter

16951

STEPS		KEY POINTS
	4.12	Recording section number of violation
	.13	Having violator sign citation
	.14	Comparing signature with that on driver's license
5. Release violator	5.1	After enforcement action
	.2	After rechecking citation for accuracy and legibility
	.3	After ascertaining if driver understands information on citation
	.4	Returning all documents
	.5	Noting where driver puts documents
	.6	Thanking driver for cooperation
	.7	Asking driver if he would like assistance to return to trafficway

16953

Training Procedure No. 8

TRAFFIC ACCIDENTS, HANDLING

INTRODUCTORY INFORMATION:

A traffic accident defies a rigid set of chronological steps for proper handling. The urgency of any one of its aspects will govern the officer's course of action.

Confusion, hysteria, injuries, fire, foul weather, bad location, high speed, traffic and poor visibility are some of the things encountered at the scene. The need and ability to make sound decisions quickly and see to it that they are carried out are imperative. The officer must control the situation.

EQUIPMENT NEEDED:

Accident Investigation Kit:
- Crayon, Marking (lumber yellow)
- Paper
- Tape Measure, 100 ft. Metal Reinforced Cloth
- Tape Measure, 10 ft. Spring Steel (white surface)
- Template, Accident Investigators

Motor Vehicle Accident Form
Form, Statement

GENERAL SAFETY PRACTICES:

Drive safely
Park properly
Be constantly alert for hazards, personal and others
Place all civilian help as safely as possible

STEPS	KEY POINTS
1. Receive accident information :	1.1 From dispatcher
:	.2 From citizen, notifying dispatcher
:	.3 Recording:
:	.1 Name and address of citizen reporting
:	.2 Type of accident:

Note: Items identified by an asterisk pertain to nighttime only.

16954 68/69

STEPS	KEY POINTS	
	1.3.2.1	Personal injury
	.2	Property damage only
	.3	Time received
	.4	Location
	.4	Obtaining as much information as possible
2. Proceed to scene	2.1	Planning action
	.2	Using extreme caution when disobeying traffic laws
	.3	Driving safely
	.4	Using shortest and quickest route
	.5	Using siren and emergency lights in accordance with departmental policy
	.6	Observing weather and road conditions
	.7	Being alert for cars leaving scene
3. Arrive at scene	3.1	Parking car at safe distance from nearest object to be protected
	.2	Leaving emergency lights operating
	*.3	Illuminate accident scene with car lights when necessary
	.4	Using off-street facilities when available and accident is not serious
	.5	Parking car crosswise to road to protect scene when necessary
	.6	Recording time arrived
4. Observe scene and situation	4.1	By quickly scanning area
	.2	To determine course of action
	.3	Traffic flow
	.4	Congestion
	.5	Road blockage
	.6	Urgent matters needing immediate accident
	.7	Hazards which could compound the accident
	.8	Positions of victims if thrown from car
5. Protect scene	5.1	To preserve evidence
	.2	Warning approaching traffic

16955

STEPS	KEY POINTS
	5.3 Setting fusees
	.4 In locating warning device, consider speeds, visibility and road condition
	.5 To prevent further damage and other accidents
	.6 To prevent theft from vehicles or injured persons
	.7 Re-parking patrol car if necessary
	.8 Roping off scene area
	.9 Detouring traffic
	.10 Requesting assistance from bystanders:
	.1 Using professional drivers when possible
	.2 Directing activities of assistants
	.11 Requesting assistance needed from headquarters - be specific
	.12 Using tow trucks or other emergency vehicles and their lights when necessary
	.13 Turning off ignitions and lights of vehicles involved
	.14 Guarding spilled gasoline or other inflammables
6. Care for injured	6.1 Moving occupants ONLY if life endangered
	.2 Calling for rescue squad, ambulance and/or medical help when necessary
	.3 Stop bleeding
	.4 Preventing shock or exposure by keeping injured warm
	.5 Assisting minor injured persons from vehicles safely
	.6 Preventing theft of personal belongings from injured persons
	.7 Noting unusual condition of injured while aiding them, such as evidence of alcohol
	.8 Keeping onlookers away from injured

16956

STEPS		KEY POINTS
	6.9	Using best help available when necessary
7. Locate and question drivers and witnesses	7.1	To establish ownership and identity
	.2	By observing
	.3	By inquiring
	.4	Recording license numbers of vehicles at accident scene - possible witnesses
	.5	If driver cannot be located, assume it is a hit and run case
	.6	Examining driver's condition
	.7	Obtaining names and addresses
	.8	Having drivers or owners assist in caring for their property
	.9	Ascertaining number of people involved and possible injuries
8. Photograph scene	8.1	When necessary
	.2	As soon as practical
	.3	To record things that were not noticed
	.4	To record original scene before changed
	.5	To show damage before vehicles are moved
	.6	To prove statements
	.7	Being selective in photographs taken
	.8	To preserve evidence or clues which may disappear
9. Sketch scene	9.1	Using Field Sketch Sheet (See Appendix 10)
	.2	To show general relationship of things
	.3	Making as neat and complete as possible - avoid erasing or altering
	.4	Sketch should be identified, day and hour of accident, names of roads, direction of north, names of people who took measurements and made drawing

16957

STEPS		KEY POINTS
10. Measure distances	10.1	Making measurements with tape
	.2	At all accidents
	.3	Locating point of impact by triangulation with permanent objects
	.4	Of all skidmarks and gouges
	.5	Locating final position of vehicles from point of impact
	.6	Location of dead or injured from point of impact
	.7	By marking various points with yellow crayon after deciding what is to be measured
	.8	Using tape cautiously near electrical wires
	.9	Stopping or warning traffic if necessary
	.10	Being accurate as possible
	.11	Locating temporary objects or things as soon as possible
	.12	Locating any possible traffic hazards
11. Gather physical evidence	11.1	By systematic search from point of approach to scene to point of departure
	.2	By collecting adequate specimens
	.3	Marking or tagging for identification
	.4	To verify or disprove statements of drivers and witnesses
	.5	Determining condition of vehicle both mechanical and otherwise
12. Take written statements	12.1	From drivers
	.2	From witnesses - first from those who may leave or be hard to reach
	.3	At the scene - or the most convenient place
	.4	Be sure statement contains necessary information
	.5	When possible, have signatures witnessed

16958

WS. 63. Screw Driver; Refer to Illustration Sheet 31, page 107. Make a working drawing of the screw driver showing the necessary views and dimensions. Have your sketch approved by the instructor before making the drawing with instruments.

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS
13. Complete Motor Vehicle Accident Report form (See Appendix V, pages 247-250)	13.1	Printing information legibly
	.2	At scene
	.3	To systematically gather information
	.4	For departmental records
	.5	To record, who-what-why-when-where and how
	.6	To furnish information to related government agencies and others
	.7	To be used in planning and research
	.8	Information must be complete
	.9	Names and addresses should be verified for spelling and correctness
14. Make arrest or issue citation	14.1	To take enforcement action
	.2	After analyzing accident
	.3	Where elements of violation can be proven in court
	.4	According to departmental policy
	.5	For violations not directly contributing to accident
	.6	For violations contributing to accident
	.7	Be specific in charging violation
	.8	Follow-up arrest or citation by explaining to citizen reason for enforcement action
15. Clear roadway	15.1	As soon as practical
	.2	Restoring normal traffic flow
	.3	Utilizing towing service
	.4	By hand pushing vehicles
	.5	Recording name of towing service
	.6	Requesting owner or driver to select tow truck service, when possible
	.7	Removing or having removed hazardous material from trafficway
	.8	Avoiding unnecessary damage to vehicle
	.9	Being alert to dangers from cables used in towing or righting vehicles
	.10	Being alert and in a safe position while tow truck is maneuvering

16959

Training Procedure No. 8

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS	
16. Answer inquiries	:	16.1	Of involved persons only
	:	.2	Telling drivers what reports they must file and where obtained
	:	.3	Giving reliable and helpful information
	:	.4	Being courteous
	:	.5	Concerning local and state traffic laws
17. Follow-up	:	17.1	Gathering facts not obtained at scene
	:	.2	Obtaining medical reports from doctor or hospital
	:	.3	Questioning drivers or witnesses that left the scene
	:	.4	Arranging for or notifying relatives of dead or injured
	:	.5	Completing necessary reports
	:	.6	Requesting departmental assistance
	:	.7	Notifying dispatcher upon completion of handling accident

16960

Training Procedure No. 9

ARRESTING

INTRODUCTORY INFORMATION:

Law enforcement agencies are given the responsibility and authority to arrest in order to protect society from the criminal. Upon the law enforcement officer is conferred the power to arrest, to use it justly and wisely is the officer's duty.

Accompanying arrest are the inherent potential dangers of physical injury or death and civil liability. Every arrest situation demands diagnosis by the officer. No two arrests are alike, they are only similar in certain phases. Each officer must be knowledgeable in both the practical and legal aspects of arrest. In the practical aspect, to develop techniques for deterring or combatting violence and to overcome the mental resistance of an arrestee. In the legal aspect, to assure compliance with the requirements of the law and to preclude legal and departmental discipline as a result of unlawful or improper handling of the arrest.

EQUIPMENT NEEDED:

Baton, Riot
Handcuffs
Injured Arrestee Field Report
Revolver
Stick, Yawara

GENERAL SAFETY PRACTICES:

Maintain physical fitness
Be constantly alert
Approach all persons and onto and into all premises with caution
Request assistance when judgment indicates
Watch arrestee's hands

STEPS		KEY POINTS	
1. Approach suspect	:	1.1	As soon as possible
	:	.2	Unfastening holster flap
	:	.3	Scanning surrounding area
	:	.4	Planning action
	:	.5	Selecting spot for arrest
	:	.6	Moving in from rear and/or side
	:	.7	Calmly
	:	.8	Quietly
	:	.9	Cautiously
	:	.10	Cutting off escape route

16961 76/77

STEPS	KEY POINTS	
	1.11	Expecting escape attempt
	.12	Using peripheral vision to detect physical or other hazards
	.13	Using available cover or shadows
	.14	Avoid being silhouetted
	.15	Noting dress for identification
	.16	Watching suspect constantly - especially hands
	.17	Watching for objects that suspect may discard
	.18	Noting his physical and mental condition
	.19	Noting personal physical characteristics for identification
2. Apprehend suspect	2.1	As soon as possible
	.2	Taking by surprise
	.3	Stopping actions
	.4	Pursuing, as required
	.5	Using force as a last resort
	.6	Restraining physically, as required
	.7	Adhering strictly to the laws of arrest
	.8	Keeping suspect away from strong hand side
	.9	Standing slightly to the rear and right of suspect
	.10	Using only that amount of force necessary to overcome resistance
	.11	Using special care with women, juveniles, and mentally ill
	.12	Using revolver for protection of life or preventing escape of felon
	.13	Requesting assistance
3. Arrest suspect	3.1	Commanding "Don't move"
	.2	Identifying self as law enforcement officer
	.3	Ordering to move only as told
	.4	Stating "You are under arrest"
	.5	Stating reason for arrest
	.6	Speaking clearly

16962

STEPS		KEY POINTS
	3.7	Using authoritative tone of voice
	.8	Noting statements by arrestee for later recording
4. Secure arrestee	4.1	Preventing escape
	.2	Ordering arrestee to assume spread-eagle position using vertical surface
	.3	Removing handcuffs from case with weak hand
	.4	Handcuffing hands behind back, palms out, key holes up, double lock pins away from arrestee
	.5	Double locking handcuffs
	.6	Isolating arrestee as soon as possible
	.7	Handcuffing to fixed object, when appropriate
	.8	Keeping in view
	.9	Blocking exits
	.10	Preventing arrestee from injuring himself or others
	.11	Preventing others from injuring arrestee
	.12	Refusing request of arrestee and/or persons wishing to see or speak to him at the scene
5. Search arrestee	5.1	After handcuffing
	.2	Select location:
	.1	Away from people
	.2	Well lighted
	.3	Away from avenues of escape
	.3	For weapons (See Appendix 27)
	.4	For evidence (See Appendix 27)
	.5	Keeping arrestee in spread-eagle position with head against vertical surface
	.6	Methodically from head to toe
	.7	Using grasping motion of hand on garment and body
	.8	Feeling for objects
	.9	Noting any peculiarities of garments

16963

STEPS		KEY POINTS
	5.10	Using female officer or trusted adult woman for females
	.11	Providing security for female searcher
	.12	Removing all metal objects that may be potential weapons
	.13	Examining objects carefully to determine if converted to weapon
	.14	Completing bodily search even though weapon or evidence found
	.15	Calling for assistance, when necessary
6. Remove arrestee from scene	6.1	Immediately from a belligerent crowd
	.2	As soon as possible
	.3	Taking to confinement facility or magistrate
	.4	Walking arrestee to confinement facility, if practical
	.5	Holding handcuff chain at all times when moving arrestee
	.6	Requesting departmental assistance for transportation
	.7	Placing arrestee in safest location within vehicle
	.8	Taking purse and spike heeled shoes from female arrestee
	.9	Notifying dispatcher and recording the starting and ending location and odometer reading for females
	.10	Refusing requests of arrestee
	.11	Keeping constantly alert against personal attack or attempt to escape
	.12	Noting statements made by arrestee during transporting
7. Process arrestee for confinement	7.1	Providing required medical treatment
	.2	Completing Injured Arrestee Field Report (See Appendix 24)
	.3	Delivering to custodial officer at appropriate institution
	.4	Adhering to institution's confinement procedures

16964

STEPS	KEY POINTS
	7.5 Having necessary commitment documents
	.6 Supplying necessary information
	.7 Searching arrestee:
	.1 In presence of custodial officer
	.2 Removing all property
	.3 Giving property to custodial officer
	.4 Retaining possession of evidence
	.5 Giving receipt for evidence taken
	.6 Accounting with custodial officer for arrestee's property
	.8 Signing required forms
	.9 Removing handcuffs
	.10 Keeping constantly alert:
	.1 Against personal attack
	.2 Attempt to escape

16965

Training Procedure No. 10

TESTIFYING IN COURT

INTRODUCTORY INFORMATION:

The arrest of a suspect after the investigation of a crime does not necessarily close the case or end the officer's responsibility.

Under our system of government, any case involving an arrest may be put to a test. This test is a court trial, which is the right of any person charged with a crime. A trial is the examination of evidence by a jury, the evidence being presented through witnesses by the attorneys for both sides of an action, according to the rules of law as interpreted by the judge. The officer must handle every case, in all its aspects, with this ultimate test in mind, since he connot foretell which investigation will result in an arrest and which of these will result in a trial.

Due to the fact that the officer is neither judge nor jury, he will not pass on legal matters nor determine the guilt or innocence of the defendent. The officer is not an attorney, therefore, he will not defend or prosecute the accused. This leaves the officer but one role in the court trial, that of a witness.

As a witness the officer is sworn to present his testimony to the court concerning his personal knowledge regarding the case. The purpose of this procedure is to assist the officer in testifying truthfully, objectively, and effectively, thereby contributing to the impartial administration of justice.

EQUIPMENT NEEDED:

Appropriate notes
Notebook, Pocket

GENERAL CAUTIONS IN TESTIFYING:

Assuming the public prosecutor's responsibilities must be avoided
Have confidence in the public prosecutor's handling of the case
Follow the public prosecutor's instructions
The officer's bearing and physical appearance must be above reproach
Testify impartially
Maintain an impersonal attitude
Tell the truth
Avoid guessing
Avoid arguing with the defense attorney
Be courteous
Sit erect

16966 ~~82~~/83

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS	
1. Prepare for court appearance	1.1	Reviewing case reports
	.2	Placing only pages pertinent to case in notebook
	.3	Checking personal appearance
	.4	Wearing proper uniform (or conservative business suit and accessories)
	.5	Avoiding the wearing of any fraternal insignia on civilian clothes
	.6	Nothing in breast pocket of civilian coat
	.7	Contacting public prosecutor, if prosecutor has not contacted officer, to discuss case and coordinate activities
	.8	Assembling physical and documentary evidence
	.9	Providing for transportation of physical evidence
2. Proceed to courthouse	2.1	With evidence and notebook
	.2	Attending correct court on day and at time specified
	.3	Arriving early
	.4	Maintaining respectful demeanor at all times
	.5	Checking with appropriate court personnel, as required
	.6	Discussing case privately only with authorized persons
	.7	Directing all other persons wanting to discuss the case to the public prosecutor
3. Confer with public prosecutor	3.1	Regarding changes
	.2	Receiving instructions
	.3	Providing physical and documentary evidence
	.4	Avoid the borrowing of prosecutor's copy of the case reports
	.5	Reviewing last minute details

16967

STEPS		KEY POINTS	
4.	Attend court	4.1	Taking no items not relevant into the courtroom
		.2	Giving bailiff Sam Browne belt and revolver in accordance with court policy
		.3	Selecting seat which affords easiest and most direct route to witness stand
		.4	Seating self before judge arrives
		.5	Avoiding all talk
		.6	Writing note when necessary to communicate with prosecutor
		.7	Paying attention to proceedings
		.8	Noting friends and associates of defendant
5.	Take the witness chair	5.1	When summoned
		.2	Be calm
		.3	Maintaining erect posture, dignified carriage, and impersonal attitude
		.4	Standing at attention and raising right arm when being sworn in
		.5	Looking at person giving the oath
		.6	Sitting erect in witness chair
		.7	Avoiding unusual mannerisms or gestures
6.	Answer questions	6.1	Asked by public prosecutor, defense attorney, and judge
		.2	Maintaining an impersonal attitude
		.3	Listening to, hearing, and understanding the question
		.4	Requesting that a question be repeated when not understood
		.5	Thinking about the question
		.6	Formulating the answer mentally and logically before replying
		.7	Answering only the question
		.8	Telling the truth
		.9	Avoid guessing
		.10	Confining testimony to relevant matters

16968

UNIT IX — SHEET METAL DRAWING

General Information

Sheet metal is a very useful material. Many of the products used in industry today depend upon this metal.

Sheet metal was first flattened by hand. We know it was made in Bohemia before 1620. A machine for rolling metal into sheets was invented in South Wales in 1865. Today giant machines roll hot metal (ingots) into large sheets.

Sheet metal comes in flat sheets from the rolling mills. In the case of steel, it may be black or galvanized.

The many useful articles constructed of sheet metal are made from patterns. The sheet metal draftsman makes the patterns. He must have a clear picture of the finished project in order to make the sheet metal pattern. This pattern, or "development" as the draftsman calls it, must be actual size with an extra allowance for hems and laps.

A development drawing is a one-view drawing showing the object spread out into one flat sheet. A "development" of a box shows the bottom of the box with the sides and ends attached. An additional amount of space must be provided for the "hems" (turned-over edges) and for the "laps" (the amount needed to fasten the sides and ends together) if needed.

The projects used in this unit of work are often made in the school metal shop as a part of the sheet metal unit.

STEPS		KEY POINTS
	6.11	Volunteering no other information
	.12	Choosing words carefully
	.13	Repeating conversations verbatim
	.14	Avoiding use of technical law enforcement terms, criminal jargon, and slang
	.15	Looking at the judge or jury, as appropriate, when replying
	.16	Speaking clearly in a conversational voice
	.17	Using plain and direct language
	.18	Answering "I don't know", as appropriate
	.19	Answering one question at a time
	.20	Stating "I cannot answer that question with a 'Yes' or 'No' ", as appropriate
	.21	Referring to notes, as required
	.22	Refreshing memory by using notes
	.23	Avoiding arguments
7. Leave the courtroom	7.1	When excused
	.2	Receiving Sam Browne belt and revolver from bailiff
	.3	Avoiding the expression of any opinions concerning the trial
	.4	Refusing to discuss case with unauthorized persons
	.5	Avoid loitering about the courthouse
	.6	Leaving courthouse when dismissed

16969

Training Procedure No. 11

FIREARMS SAFETY AND NOMENCLATURE

INTRODUCTORY INFORMATION:

Safety in handling firearms is fundamental to the protection of life. There is no margin for error in determining whether or not a firearm is loaded. These statements are particularly true in a training situation. Too often we read or hear about the officer inadvertently shot by a brother officer or see the department floor or ceiling with a bullet hole in it. Each officer must strictly adhere to all safety rules concerning firearms.

Every officer should know, generally, the names of the most important parts of firearms. By doing this an understanding of the mechanical operation is more easily achieved. Knowing the parts and their function in the operation of the weapon better prepares the officer to detect a possible malfunction or unsafe condition. To detect a malfunction or unsafe condition and subsequently repair it ensures dependable operation.

EQUIPMENT NEEDED:

Departmental or personal weapon used on duty - sidearm
Revolver cleaning kit
Shotgun 12 gauge, riot
Shotgun cleaning kit

Training Procedure No. 11

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
1. Learn Safety Rules	Treat all guns as though they are loaded.
	Point a firearm only at a person you are justified in killing.
	Allow only an expert to repair your weapon.
	All firearms training must be properly and adequately supervised by someone in authority. All safety precautions must be adhered to and enforced.
	Strictest discipline must be maintained. Carelessness and thoughtlessness cannot and must not be tolerated during firearms training.
	Immediately on picking up a firearm, open the cylinder or action and check to see that it is unloaded--check it again.
	A firearm is given to or received from another person only when the cylinder or action is open.
	Never anticipate a command.
	Check for obstruction in barrel of a firearm before loading.
	Load only after position is taken at the firing point and the command to load has been given.
	Unload when and as instructed.
	Keep the firearm pointed down range at all times.
	Draw a revolver from the holster or reholster with the finger outside the trigger guard.
	When shooting single-action, place your finger on the trigger only after the firearm is pointed toward the target and the cocking action has been completed.

16971

STEPS	KEY POINTS
	No smoking on the firing line.
	No talking on the firing line or to shooters on the firing line, except by instructors.
	Always keep the muzzle of a firearm from touching the ground.
	Place thumb in front of the hammer before releasing the trigger when letting hammer down on a live cartridge.
	In case of a misfire, keep the firearm pointed down range at least ten seconds before opening the cylinder.
	After a malfunction unload and check the barrel for obstructions before firing a succeeding shot.
	Unload firearm before leaving the firing line.
	Leave firing line only when command is given.
	A loaded firearm is allowed only on the firing line.
	Dry fire on the range only under the supervision of an instructor.
	Pay strict attention to the range officer. He will instruct you as to exactly what you are to do.

REVOLVER SHOOTING - TARGET - COMBAT

INTRODUCTORY INFORMATION:

Target shooting offered through an organized training situation by a qualified instructor provides the best method to learn the fundamentals of revolver shooting. The use of a revolver as a weapon requires expert training and regular practice. Expert training is necessary to acquire the basic knowledge and skill necessary to develop proficiency in handling the weapon and regular practice is required to maintain and increase proficiency.

Once the officer acquires the basic knowledge and skill of handling the revolver he must then proceed to develop as much skill as possible in reacting to a combat situation. Combat shooting requires firing rapidly and accurately.

Concomitant with skillful use of the weapon is the equally important criterion of determining the justifiable use of the weapon. Not knowing under what circumstances the weapon may be used places the officer at a decided disadvantage. Use of the weapon in any situation must be based on sound judgment with the ever present thought that hanging in the balance of a decision is life or death.

EQUIPMENT:

Revolver Cleaning Kit .38 Caliber:
- Bore Brush, Brass wire
- Bore Cleaner
- Carwax, fine grade
- Cloth, Polishing
- Coarse cloth or extra fine steel wool
- Cylinder Brush, Nylon or Bristle
- Gun Grease, Fine Grade
- Lightweight Oil, Fine Grade
- Patches, Cleaning
- Rod, Cleaning with detachable tip

Screwdriver, small

Toothbrush or 1/2" to 1" Bristle Paint Brush

Sidearm, Departmental issue or personal

Target, Silhouette

GENERAL SAFETY PRACTICES:

Review Safety Practices Training Procedure No. 11

REVOLVER SHOOTING - SINGLE ACTION BULLSEYE TARGET

STEPS	KEY POINTS
1. Assume offhand stance	1. Any one of three positions: 1.1 Face target 1.2 Blade target 1.3 45° angle to target 2. Feet 12" to 18" apart 3. Weight evenly distributed 4. Stance should be practiced till it becomes natural

Stances, left to right: facing target directly; "blading" target; compromise position at 45 degree angle to target.

16976

STEPS		KEY POINTS	
2. Draw Revolver	:	2.1	Face target
	:	.2	Place strong hand on butt of weapon
	:	.3	Grip firmly
	:	.3.1	Place webbing between thumb and forefinger high on back strap
	:	.3.2	Keep trigger finger out of guard.
	:	.3.13	Thumb high on frame, no pressure
	:	.3.14	Maintain grip
	:	.4	Snap weapon out of holster

16977

STEPS		KEY POINTS
3. Load Revolver	3.1	Keep weapon pointed down range
	.2	Place revolver in palm of weak hand
	.3	Releasing cylinder latch with thumb of strong hand
	.4	Push cylinder out with middle two fingers
	.5	Obtain six cartridges
	.6	Lower muzzle to 45° angle
	.7	Hold cartridges in palm of strong hand
	.8	Grasp rim of cartridge with tips of thumb, index and middle finger
	.9	Insert cartridge into cylinder chamber
	.10	Revolve cylinder with thumb of weak hand
	.11	Bringing empty cylinder to the top
	.12	Load all cylinders
	.13	Close cylinder, gently

Training Procedure No. 12

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS
2. Draw Revolver	2.1	While assuming position
	.2	Lock hand on butt thumb down
	.2.1	Keep trigger finger out of trigger guard
	.3	Snap revolver out of holster
	.3.1	Insert trigger finger when revolver clears holster
	.4	Maintain firm grip

WEAK HAND - DOUBLE ACTION

STRONG HAND - DOUBLE ACTION

16982

Training Procedure No. 12

REVOLVER SHOOTING - TARGET - COMBAT

STEPS		KEY POINTS	
3. Fire at target	3.1	Concentrate vision on target at distances 0 to 15 yards.
A. Hip shooting	3.a.1	Point revolver at target as you would index finger
	a.2	Upper arm 45° angle, forearm and hand parallel to ground
	a.3	Elbow in front of body (tucked in)
	.2	Trigger finger inserted to first joint or further
	.3	Stroke trigger back, smoothly
	.4	Maintaining firm grip

CROUCH POSITION

16983

STEPS		KEY POINTS
b. Standing or offhand	b.1	In the open or from behind object
	.2	Feet 12" to 18" apart or best balanced position
	.3	Holding revolver straight out at shoulder height
	.4	Locking shoulder, elbow, wrist
	.5	Focusing vision on revolver sights so target appears fuzzy or gray
	.6	Stroke trigger back, smoothly
	.7	Maintaining firm grip

STANDING POSITIONS
WITHOUT SUPPORT

OFF-HAND

16984

STEPS		KEY POINTS
c. Kneeling	:	3.c.1 Dropping down to strong knee
	:	.2 Holding revolver straight out at shoulder height
	:	.3 Locking shoulder, elbow and waist
	:	.4 Focusing vision on revolver sights so target appears fuzzy or gray
	:	.5 Stroke trigger back, smoothly
	:	.6 Maintaining firm grip

KNEELING POSITION

16985

STEPS		KEY POINTS
d. Sitting	3.d.1	Place weak hand behind back and sit down
	.2	Extend revolver straight out from shoulder
	.3	Lock shoulder, elbow and wrist
	.4	Focus vision on sights so target appears fuzzy or gray
	.5	Stroke trigger back, smoothly
	.6	Maintaining firm grip

SITTING POSITION

16986

Training Procedure No. 12

REVOLVER SHOOTING - TARGET - COMBAT

STEPS		KEY POINTS	
e. Prone	:	e.1	Fall to knees and then rest of way down
	:	.2	Use weak hand to break fall
	:	.3	Extend revolver arm out and lock in position
	:	.4	Use palm of weak hand to rest revolver butt (optional)
	:	.5	Focus vision on revolver sights so target appears fuzzy or gray
	:	.6	Stroke trigger back, smoothly
	:	.7	Maintain firm grip

 16987

FUNNEL

W.S. 68.

ILLUSTRATION SHEET 33.

1696

FIREARMS, SHOTGUN SHOOTING (12-GAUGE)

INTRODUCTORY INFORMATION:

The shotgun is a versatile weapon that commands a tremendous psychological respect because of its effectiveness. At close range, loaded with shot, the shotgun is formidable. Actual aiming is not required and the officer can literally spray any given area. Loaded with the rifled slug and at ranges to 100 yards its penetration and stopping power is more than adequate in most instances. It lends itself well to a law enforcement combat situation both psychologically and through effective firepower.

The law enforcement officer who resorts to the use of a shotgun by assignment or choice must be trained in its use. Placed in the hands of an untrained officer the shotgun is dangerous to all involved and its effectiveness is doubtful.

EQUIPMENT NEEDED:

Riot Shotgun, 12-Ga. Pump or Automatic
Shells, 12-Ga. 00 Buck Shot
Shells, 12-Ga. Rifled slug
Shotgun, 12 Ga. Cleaning kit
Target, Bobber

GENERAL SAFETY PRACTICES:

Make certain safety is on at all times other than actual firing
Never load until instructed to load
Keep shotgun pointed down range at all times
Check shotgun shells to make certain they are proper gauge and load - pellet - slug
Visually check barrel and receiver for obstruction

16988

Training Procedure No. 13

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS	
1. Assume stance		1.1	Facing target
a. Hip		2.	Lock stock against side just above hip
		3.	Use forearm parallel to stock for locking
		4.	Pointing shotgun at target
		5.	Using peripheral vision to line up barrel and target
		6.	Place weak hand on fore-end
b. Shoulder		1.b.1	Bring shotgun to shoulder height
		.2	Fit stock tight against shoulder on muscular portion
		.3	Point shotgun at target
		.4	Place weak hand on fore-end
2. Load shotgun		2.a.1	Make certain safety is in "on" position
a. Pump		a.2	Turn shotgun over so trigger guard is up
		a.3	Check shells for damage, proper gauge, proper load
		a.4	Insert shells in magazine loading port
		a.5	Start shell in by using thumb, index and middle finger
		a.6	Use thumb on base of shell to push shell in rest of way
		a.7	After magazine loaded return shotgun to firing position
		a.8	Pull back quickly and firmly on fore-end to load shell in firing chamber
b. Automatic		2.b.1	Follow above procedure except pull back on operating handle to load shell in firing chamber

SHOTGUN BOBBER TARGET
(cardboard or similar material)

16989

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
3. Fire shotgun	3.1 Release safety with index finger
	.2 Recheck sight alignment
a. pump	.3 Squeeze trigger back firmly and rapidly
	.4 Release trigger completely
	.5 Readjust shotgun on target if necessary
	.6 Pull back quickly and firmly on fore-end to reload chamber
	.7 Repeat trigger squeeze and reloading as often as necessary
b. Automatic	b.1 Trigger may be squeezed till all rounds are expended then reloaded.

16990

Training Procedure No. 14

CIVIL COMPLAINTS, DEALING WITH

INTRODUCTORY INFORMATION:

Ministering to the needs of the public is an integral part of an officer's duties. The "need," as identified by a person, usually is in the form of a complaint, request for assistance, or protection. Often these complaints or requests are totally unrelated to the primary or secondary responsibilities of law enforcement. Yet, they must be dealt with because the individual has indicated a "need." The nature of the complaint or request, may at times, be vague thereby requiring personal response or contact by an officer. On the other hand the "need" may be resolved by the person receiving the information via telephone or personal contact at the agency. Either instance necessitates the proper disposition by the officer. The proper disposition can be satisfactorily accomplished when the officer learns how to effectively deal with this "need."

Acceptable performance by the officer helps to create the public support of law enforcement which is absolutely necessary if law enforcement is to fulfill its primary and secondary responsibilities.

EQUIPMENT NEEDED:

Notebook, Pocket Field
Pen, Ball Point

GENERAL SAFETY PRACTICES:

Avoid taking sides in any issue
Entering all premises and approaching all persons and things with caution

STEPS		KEY POINTS	
1. Receive assignment or information	:	1.1	From dispatcher
	:	.2	Acknowledging call immediately
	:	.3	Identifying unit and location
	:	.4	From citizen, notifying dispatcher
	:	.5	Stopping patrol car before writing
	:	.6	Recording on patrol car desk pad:
	:	.6.1	Location of scene
	:	.2	Type of complaint
	:	.3	Person to be contacted and/or complainant and address.

16991

STEPS		KEY POINTS
	.6.4	Time received
	.7	Repeating location to dispatcher for verification
	.8	Acknowledging receipt of transmission
	.9	Requesting required information
	.10	Understanding assignment
2. Proceed to scene	2.1	As soon as possible, unless otherwise instructed
	.2	Using most expeditious route
	.3	Driving safely
	.4	Obeying all traffic laws
	.5	Planning operations within known information
	.6	Notifying dispatcher of personal knowledge
3. Arrive at scene	3.1	Parking safely
	.2	Giving dispatcher exact location
	.3	Signalling dispatcher "Out of Service"
	.4	Recording time
	.5	Removing ignition key
	.6	Taking required equipment
	.7	Alighting from patrol car with caution
	.8	Locking patrol car
	.9	Entering onto all premises with caution
	.10	Approaching all persons and things with caution
4. Observe scene and situation	4.1	Appearing and keeping calm
	.2	Determining personal safety
	.3	Gathering information
	.4	Determining future action
	.5	Noting:
	.5.1	Mood and state of participants or complainant
	.2	Physical and mental conditions of participants or complainant
	.6	Scanning area for potential weapons

16992

STEPS	KEY POINTS
5. Preserve the peace	5.1 Greeting complainant or participants with a smile
	.2 Asking, "May I be of service?"
	.3 Speaking in soft conversational tone
	.4 Quieting persons present
	.5 Removing participants to secluded area
	.6 Separating participants
	.7 Rendering personal service impartially
6. Identify participants or complainant	6.1 Contacting complainant first, by name
	.2 Contacting witnesses in logical order
	.3 Requesting participants to identify witnesses
	.4 Recording in notebook:
	.1 Name
	.2 Age
	.3 Address
	.4 Telephone number
	.5 Occupation
	.6 Employer:
	.1 Address
	.2 Telephone number
7. Interview participants	7.1 Individually and privately
	.2 Obtaining accurate information
	.3 Allowing interviewees to tell own version of event
	.4 Asking as few questions as possible
	.5 Recording required notes at completion
	.6 Repeating interviewees' statements for verification
	.7 In logical order, depending on circumstances
8. Verify cause of complaint	8.1 Those against government
	.2 When possible and within capabilities
	.3 Determining that complaint is civil

16993

STEPS		KEY POINTS	
9.	Take corrective action	9.1	Those against government
		.2	When possible and within capabilities
		.3	Writing memorandum to department concerned when unable to correct cause
		.4	Addressing memorandum to department head
		.5	Routing it through supervisor
		.6	Completing memorandum before going off duty
		.7	Keeping a copy for reference
		.8	Making recommendation when advisable
10.	Explain jurisdiction limitations	10.1	Regarding civil matters
		.2	Between local government departments
		.3	Concerning law enforcement agency's regulations and policies
		.4	In a courteous manner
11.	Inform and direct complainant	11.1	Avoid taking sides in any issue
		.2	Avoid giving legal advice
		.3	Of possible courses of action
		.1	Avoiding the suggestion of any possible results
		.4	Regarding the name, address, and business hours of the proper agency to contact
		.5	Stating what officer can or will do to assist
		.6	What complainant can do to assist in solution of complaint
		.7	Asking if instructions and directions are understood
		.8	Writing them out, if necessary
		.9	Thanking the complainant

16994

Training Procedure No. 15

FIRE SCENES, HANDLING

INTRODUCTORY INFORMATION:

Fire fighting is a fireman's task but many times the law enforcement officer is first on the scene. Some of the problems which involve an officer at a fire scene are usually spectators, vehicular traffic congestion and emotional instability. If the officer knows and identifies the problems which may arise and then takes effective measures to prevent or handle them, this materially assists the fire service and citizens of the community. On the other hand, when these problems are not effectively handled, fire fighting efforts may be hindered, personal injury and death multiplied and additional property damage incurred. Through effective handling lives may be saved and government service is definitely improved.

EQUIPMENT NEEDED:

Blanket	Flashlight, Safety Approved
Fire Extinguisher, CO_2	Notebook, Pocket Field
Fusees	Rope

GENERAL SAFETY PRACTICE:

Do not enter a burning structure except to save lives

STEPS		KEY POINTS
1. Receive assignment	1.1	From dispatcher
	.2	Acknowledging initial call immediately
	.3	Identifying unit and giving location
	.4	Stopping patrol car before writing
	.5	Recording on patrol car desk pad:
	.1	Location of scene
	.2	Person to be contacted
	.3	Time received
	.6	Noting situation at scene
	.7	Noting actual or potential hazards to persons involved
	.8	Noting personal hazards
	.9	Noting avenues of approach
	.10	Understanding assignment
	.11	Requesting required information

16995

STEPS		KEY POINTS
	.12	Repeating location of scene for verification by dispatcher
	.13	Ascertaining if fire department has been notified
2. Proceed to scene	2.1	Promptly
	.2	Driving safely
	.3	Using most expeditious route
	.4	Considering avenues of approach
	.5	Avoiding use of patrol car siren and beacon unless otherwise instructed
	.6	Planning operations within known information
	.7	Requesting information and/or assistance--as required
	.8	Notifying dispatcher of personal knowledge
	.9	Observing traffic problems in vicinity of scene
	.10	Watching for persons leaving the immediate scene
	.11	Watching for fire apparatus responding to scene
	.12	Yielding right-of-way to fire apparatus
3. Observe scene and situation	3.1	While approaching
	.2	Gathering information
	.3	Determining personal safety
	.4	Noting vehicles blocking fire lane
	.5	Determining presence of fire fighting apparatus
	.6	Noting color and amount of flames and smoke
	.7	Noting number of fires
	.8	Noting rapidity of flame spread
	.9	Detecting flammable odors
	.10	Noting direction of wind
	.11	Determining if neighboring structures are in danger

16996

STEPS		KEY POINTS	
4.	Arrive at scene	4.1	Noting time
		.2	Turning on patrol car beacon
		.3	Parking safely
		.4	Avoiding interference with fire fighting apparatus
		.5	Using patrol car as barricade
		.6	Keeping calm
		.7	Extinguishing incipient fire
		.8	Notifying dispatcher of state of fire
		.9	Giving exact location
		.10	Notifying dispatcher of presence of fire fighting apparatus
		.11	Alighting from patrol car with caution
		.12	Locking patrol car
		.13	Determining if there are occupants in burning structure
		.14	Determining if there are occupants in neighboring structures
		.15	Determining if anyone has been killed or injured
		.16	Directing fire fighting apparatus to scene
		.17	Removing parked vehicles only upon request of fire service officer-in-charge
		.18	Requesting assistance--as required
5.	Rescue occupants	5.1	Only if fire fighters are not present and conditions permit
		.2	Warning inhabitants by use of siren and horn
		.3	Assisting occupants physically
		.4	Preventing exposure
		.5	Deter occupants from re-entering burning structure

16997

W.S. 69.

ILLUSTRATION SHEET 34.

1697

STEPS		KEY POINTS	
		.6	Determining if all occupants have escaped
		.7	Avoid the wearing of raingear into burning structure
		.8	Using wet blanket for protection
		.9	Covering nose and mouth with wet hankerchief
		.10	Entering burning structures with extreme caution
		.11	Feeling door to determine heat
		.12	Opening door only if hand can withstand heat
		.13	Opening door wide, standing to one side
		.14	Closing door after passing through
		.15	Stooping to knee height
		.16	Remembering hot and toxic gases rise fast
		.17	Realizing entrance route may not be safe exit route
		.18	Avoiding the use of flashlight not safety approved
6.	Care for victims	6.1	Promptly
		.2	Requesting appropriate assistance
		.3	Notifying dispatcher
		.4	Arranging for care of homeless
		.5	Contacting appropriate service agency or relatives
7.	Control traffic	7.1	Vehicular and pedestrian
		.2	Keeping fire lane open
		.3	Until properly relieved
		.4	Courteously and firmly
		.5	Preventing damage to fire fighting apparatus
		.6	Preventing interference with fire fighting operations

16998

STEPS		KEY POINTS	
		.7	Removing those vehicles indicated by fire service officer-in-charge
		.8	Warning and diverting vehicular traffic
		.9	Selecting and directing to alternate route
		.10	Setting up fire lines
		.11	Using patrol car, barricades, and lighting
		.12	Using bystanders temporarily for assistance
		.13	Permitting authorized vehicles only inside vehicle fire line
		.14	Permitting fire fighting personnel only inside pedestrian fire line
		.15	Facing crowd to control bystanders
		.16	Checking with fire service officer-in-charge prior to opening additional lanes of traffic at scene
		.17	Allowing and assisting traffic to regain normal flow when emergency is ended
		.18	Assisting fire fighting apparatus in leaving scene
		.19	Leaving scene after securing clearance from fire-service officer-in-charge
8.	Guard property	8.1	Until arrival of claimant
		.2	Until arson investigation is completed
		.3	Until properly relieved
		.4	Keeping unauthorized persons away
		.5	Securing building
		.6	Barricading area
		.7	Placing all property in one place
		.8	Determining ownership

16999

STEPS		KEY POINTS	
		.9	Segregating according to ownership
		.10	Identifying claimant
		.11	Releasing property to owner or authorized claimant only
		.12	Recording time property released and identification of claimant
		.13	Receiving receipt for released property
		.14	Informing, if requested, claimant of available security arrangements
9.	Assist fire service	9.1	Looking for evidence of incendiarism and/or other offense
		.2	Arranging for photographing scene and spectators, in color preferably
		.3	Noting and observing spectators
		.4	Identifying habitual fire spectators
		.5	Checking with fire fighting personnel
		.6	Notifying supervisor of suspected offense
10.	Submit reports	10.1	Whenever incendiarism and/or evidence of other offense is indicated or when fire department did not respond
		.2	Promptly
		.3	Using appropriate forms
		.4	Constituting permanent record
		.5	Completing at headquarters
		.6	Submitting to supervisor

17000

Training Procedure No. 16

DISASTER SCENE, HANDLING

INTRODUCTORY INFORMATION:

Natural disasters are oftentimes predictable, for example, those created by weather. Consequently, operations can be pre-planned by law enforcement so that this type of disaster may be effectively handled. On the other hand, another type of disaster, the unpredictable occurs as a result of violent forces erupting to create destruction of life and property. Even though this type of disaster seldom occurs, law enforcement must still pre-plan for it.

The primary role of law enforcement is coordination of all efforts at the disaster scene. Control exercised by law enforcement at the scene will most effectively achieve the necessary coordination.

The first officer upon the scene will be the key to the successful implementation of the departments pre-planned disaster operation. Among other duties, he will provide vital information to the communications center so that any emergency or rescue operation can be undertaken promptly and efficiently. Because of the very nature of a disaster it is extremely easy for an officer to be caught-up in the panic. The officer must know the duties at the scene and fulfill them. Above all he cannot become a part of or party to the panic.

EQUIPMENT NEEDED:

Blanket
Flashlight, Safety Approved
Fusees
Notebook, Pocket Field
Rope, Polyproplyene or nylon

GENERAL SAFETY PRACTICES:

Be calm
Be constantly alert for potential personal hazards

STEPS		KEY POINTS
1. Receive assignment and information	1.1	From dispatcher
	.2	Acknowledging initial call immediately
	.3	Identifying unit and giving location

17001

STEPS		KEY POINTS
	.4	Stopping patrol car before writing
	.5	Recording on patrol car desk pad:
	.1	Location of scene
	.2	Person to be contacted
	.3	Time received
	.6	Noting situation at scene
	.7	Noting affected and potential affected area
	.8	Noting avenues of approach
	.9	Noting actual or potential hazards to persons involved
	.10	Noting personal hazards
	.11	Understanding assignment
	.12	Requesting required information
	.13	Ascertaining what other emergency service units have been dispatched
	.14	Repeating location of scene for verification by dispatcher
2. Proceed to scene	2.1	Promptly
	.2	Driving safely
	.3	Considering avenues of approach
	.4	Using most expeditious route
	.5	Avoiding use of patrol car beacon and siren unless otherwise instructed
	.6	Planning operations within known information
	.7	Requesting information and/or assistance--as required
	.8	Notifying dispatcher of personal knowledge
	.9	Watching for and yielding right-of-way to other emergency vehicles responding
	.10	Exercising care when driving in danger areas

17002

STEPS		KEY POINTS	
3.	Make reconnaissance	3.1	Rapidly and calmly
		.2	Gathering accurate information
		.3	Determining perimeter of Theater of Operations:
		3.3.1	Immediate disaster area
		.2	Potential disaster area
		3.4	Determining serious damage to:
		.1	Trafficways
		.2	Public utilities
		.3	Sewer systems
		.4	Buildings
		.5	Determining number of persons:
		.1	Killed
		.2	Injured
		.3	Homeless
		.4	Panic stricken
		.6	Determining law enforcement hazards which afford possibilities of looting
		.7	Determining number, location, and stage of fires
		.8	Determining direction of wind
		.9	Obtaining information desired by dispatcher
		.10	Determining emergency vehicle lanes
		.11	Locating and identifying unexploded ordinance
		.12	Working in towards center of Theater of Operations
4.	Report information	4.1	To dispatcher
		.2	Immediately and calmly
		.3	When radio is free for transmission
		.4	Identifying unit and location
		.5	Indicating results of reconnaissance
		.6	Labeling statements that are opinions
		.7	Keeping transmissions brief
		.8	Breaking long transmissions periodically

17003

STEPS		KEY POINTS	
5.	Arrive at scene	5.1	Observing while approaching
		.2	Stopping siren, if used, leaving on patrol car beacon
		.3	Parking properly
		.4	Watching for toppling buildings, street cave-ins, and downed wires
		.5	Requesting assistance
		.6	Alighting from patrol car with caution
		.7	Avoiding interference with emergency apparatus
		.8	Locking patrol car
		.9	Rescuing victims
		.10	Administering first aid
6.	Observe scene and situation	6.1	Gathering further information
		.2	Determining personal safety
		.3	Determining number and degree of personal injuries
		.4	Determining amount and degree of property damage
		.5	Noting type and amount of emergency and/or rescue equipment and personnel required
		.6	Noting danger to neighboring property
7.	Establish law enforcement lines	7.1	As ordered by supervisor or dispatcher
		.2	Preventing further injury and damage
		.3	Keeping unauthorized vehicles and pedestrians away from scene
		.4	Keeping emergency vehicle lanes open
		.5	Preventing interference with rescue operations
		.6	Using patrol car as barricade
		.7	Controlling traffic

17004

	STEPS		KEY POINTS
		.8	Selecting and directing traffic to alternate routes
		.9	Maintaining lines until emergency is ended or until properly relieved
		.10	Assisting traffic in returning to normal flow
8.	Guard property	8.1	Preventing looting
		.2	Keeping unauthorized persons away
		.3	Issuing receipt for found property to finder
		.4	Turning in found property to property officer
		.5	Determining and identifying owner
		.6	Recording information learned
		.7	Until properly relieved

17005

Training Procedure No. 17

UNLAWFUL GATHERING, HANDLING

INTRODUCTORY INFORMATION:

The beat officer will occasionally be called upon to handle various types of public gatherings. These assignments may range from school-aged children playing in the street, to thousands of adults rioting in a community. A riotous mob is an example of what a community would be like without law enforcement services. The law exists prohibiting such conduct; but it is not effective without the officer's enforcement.

Any public gathering is a potentially explosive situation. Unfortunately it is extremely difficult to determine who or what will light the fuse. Certain elements that are clues to a potential mob or riot can be detected. When these are recognized and handled it may well be that a potentially explosive situation can be controlled.

EQUIPMENT NEEDED:

Baton, Riot
Form, Field Interrogation Report
Form, Preliminary Investigation Report
Form, Request to Disperse
Gas Masks
Grenades, Tear Gas
Helmet, Safety
Riot Statute, Prepared Copy in Pocket Notebook
Shotgun, Riot

GENERAL SAFETY PRACTICES:

Be calm, firm, and objective
Concentrate on dispersal
Maintain vigilance
Wearing safety helmet properly secured at all times
Watch for objects thrown from behind front ranks of gathering
Avoid encirclement
Maintain position in formations
Guard officers and other departmental equipment
Riot equipment must be in good order
Remove wrist watch, badges, glasses, and neckties

17006

126/

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS
1. Receive assignment and information	1.1	From dispatcher
	.2	Acknowledging call immediately
	.3	Identifying unit and giving location
	.4	Stopping patrol car before writing
	.5	Recording on patrol car desk pad:
	.1	Location of scene
	.2	Type of offense
	.3	Person to be contacted
	.4	Time received
	.6	Noting situation at scene
	.7	Noting actual or potential hazards to persons involved
	.8	Noting estimated number of persons involved
	.9	Noting kind and number of weapons involved
	.10	Noting personal hazards
	.11	Noting avenues of approach
	.12	Understanding assignment
	.13	Requesting required information
	.14	Repeating location of scene for verification by dispatcher
2. Proceed to scene area	2.1	Quickly as possible
	.2	Driving safely
	.3	Using most expeditious route
	.4	Considering avenues of approach
	.5	Using patrol car beacon and/or siren--as required
	.6	Planning operations within known information
	.7	Notifying dispatcher of personal knowledge
	.8	Observing traffic problems in vicinity of scene
	.9	Stopping patrol car at selected vantage point
	.10	Allowing avenues of escape for crowd
	.11	Turning off patrol car beacon and stopping siren

17007

Assignment

WS. 64. Box: Refer to Illustration Sheet 32, page 113. Make a "development" or pattern of the box showing necessary hems and laps. Make your pattern full size. Dimension your drawing. Letter-in your title strip. After your drawing has been graded, your teacher may want you to cut out the pattern and fold it to make the box. Fold the hems to the outside of the box. Use drafting tape to hold the sides and ends together. Show the completed box to the instructor.

WS. 65. Parts Tray: Refer to Illustration Sheet 32, page 113. Make a "development" or pattern of the sheet metal part of the parts tray showing necessary hems and laps. Make your pattern full size. Dimension your drawing. Letter-in your title strip. After your drawing has been graded, your teacher may want you to cut out the pattern and fold it to make the parts tray. Fold the hems to the outside of the tray. Use drafting tape to hold the sides and ends together. Show the completed tray to the instructor.

WS. 66. Cup: Refer to Illustration Sheet 32, page 113. Make a pattern of the body, bottom, and handle of the cup showing necessary hems and laps. Make your pattern full size. On a piece of practice paper, design your own curves for the handle. To find the length of the handle when it is stretched out flat, measure it in small units such as $\frac{1}{4}$" so that the stretch-out will be more accurate. The handle on the sketch tapers from 3/4" at the large end to 1/4" at

STEPS		KEY POINTS	
3.	Observe scene and situation	3.1	From selected vantage point
		.2	Keeping out of sight
		.3	Keeping calm
		.4	Gathering information
		.5	Determining personal safety
		.6	Determining mood and state of gathering
		.7	Noting type and direction of movement
		.8	Scanning group for weapons or potential weapons
		.9	Scanning area for avenue of departure for crowd
		.10	Identifying leaders
		.11	Noting offenses and identifying perpetrators
		.12	Determining future action
4.	Request assistance	4.1	As required
		.2	Using radio
		.3	Notifying dispatcher of:
		.1	Situation at scene
		.2	Number of persons involved
		.3	Weapons being or liable to be used
		.4	Asking that supervisor be sent
		.5	Designating sufficient personnel, weapons, and equipment to insure success
		.6	Designating assembly point
		.7	Designating routes of approach
		.8	To photograph for other units, scene and participants
5.	Plan tactics	5.1	With supervisor, dispatcher, and assisting personnel
		.2	Selecting avenues of officer's approach and escape for crowd
		.3	Selecting formations (See App. 28, 29, 30, 31)
		.4	Designating positions, weapons, and equipment

17008

STEPS		KEY POINTS
	.5	Assigning duties
	.6	Assigning guard to law enforcement agency's equipment
	.7	Selecting method of handling prisoners and injured
	.8	For removing cause of dissension
6. Request dispersal	6.1	From discreet distance
	.2	Protecting speaker
	.3	Keeping calm
	.4	Maintaining military bearing
	.5	Remaining courteous but firm
	.6	Speaking in conversational and understandable tone
	.7	Request cooperation (See Appendix 32)
	.8	Explaining reasons for request
	.9	Avoiding arguments
	.10	Thanking participants for cooperation
	.11	Notifying gathering of:
	.1	Actual and potential offenses
	.2	Possible injury
	.3	Allotted time and avenues of departure
	.12	Using loudspeaker to insure hearing
7. Order dispersal	7.1	At end of allotted time
	.2	Keeping calm
	.3	According to law (See Appendix 33)
	.4	Identifying self as a law enforcement officer, by name and agency
	.5	Reading the riot statute
	.1	Placing an officer on opposite perimeter of assembly to test and insure hearing
	.6	Designating time alloted for compliance

17009

	STEPS		KEY POINTS
8.	Approach assembly	8.1	At expiration of allotted time
		.2	To physically disperse crowd
		.3	Removing wrist watch, shoulder strap, glasses, tie, and badges
		.4	Wearing prescribed equipment
		.5	Carry prescribed weapons
		.6	Fearlessly
		.7	Keeping calm
		.8	In prescribed formation
		.9	Maintaining position in formation
		.10	Advancing at slow, steady pace
		.11	Avoiding conversation
		.12	Listening for commands
		.13	Being alert to potential hazards
		.14	Using peripheral vision
		.15	Watching for objects thrown from behind front ranks of assembly
		.16	Executing orders with snap, confidence, and precision
		.17	Caring for injured officers
9.	Arrest violators	9.1	Objectively and impartially
		.2	Selecting leaders and agitators
		.3	Removing them quickly from view and scene
		.4	Protecting arresting officers
		.5	Guarding against escape or liberation attempts
		.6	Gathering physical evidence
		.7	Protecting weapons and/or evidence
		.8	Using only necessary force
10.	Follow-up	10.1	To prevent recurrence
		.2	Gathering information and evidence for reports and prosecution
		.3	Determining cause, instigators, and method of operation
		.4	Identifying participants
		.5	Breaking up large segments into ever smaller groups

17010

STEPS		KEY POINTS	
11.	Submit reports	11.1	Completing Preliminary Investigation Report Form
		.2	At headquarters
		.3	To supervisor
		.4	Recording injury to persons and damage to property

17011

Training Procedure No. 18

TRAFFIC CONGESTION, HANDLING

INTRODUCTORY INFORMATION:

The motoring public expects to travel the trafficways with a minimum of interruption. Should an interruption occur it usually creates an irritated driver. The irritated driver can easily become an accident going somewhere to happen.

An officer handling traffic congestion can and must rapidly and effectively restore traffic to its normal flow. This is best accomplished by identifying the problem and correcting it. A system of distinct gestures and signals make drivers respond, thereby, providing for a minimum of interruption which the motoring public appreciates.

EQUIPMENT NEEDED:

Whistle, Traffic
*Baton, Traffic, Red
*Flashlight, Clear lens
Gloves, White or Yellow Cloth

* To be used at night

GENERAL SAFETY PRACTICES:

Being constantly alert to moving traffic and pedestrians
Always selecting best position to see and to be seen
Using Traffic Baton at night or during adverse weather conditions

	STEPS		KEY POINTS
1.	Observe scene and situation	1.1	After parking properly
		.2	Selecting safe position while standing or walking
		.3	Quickly scanning area to determine:
		.1	Cause of congestion
		.2	Urgent matters requiring immediate action
		.3	Course of Action
2.	Relieve cause of congestion	2.1	Taking action to:
		.1	Remove obstruction
		.2	Effect temporary or permanent repairs
		.2	Route traffic around cause temporarily

17012

STEPS		KEY POINTS	
		.3	Replace signal control with officer control
3.	Direct traffic	3.1	Before or after relieving cause
		.2	Selecting officer control point: (See Appendix 34)
		.1	Safest
		.2	Clearly seen
		.3	BEING CONSTANTLY ALERT TO MOVING VEHICLES AND PEDESTRIANS
a.	Assume ready position	a.1	Standing erect
		.2	Keeping feet 8" to 10" apart
		.3	Letting arms hang naturally
		.4	Balancing weight on both feet
		.5	Having traffic whistle ready
b.	Start traffic using hand gesture	b.1	Standing parallel or at slight angle to traffic
		.2	Attracting drivers attention by:
		.1	Pointing index finger at driver from shoulder height
		.2	Blowing two (2) short blasts of traffic whistle only if necessary
		.3	Turning wrist so palm is up after pointing
		.4	Using elbow as pivot point
		.5	Swinging forearm in an upward arc
		.6	Bringing hand to position in front of chin, palm down, forearm parallel to ground
		.7	Repeating if driver does not respond

17013

STEPS	KEY POINTS
	.8 Making movement of arm deliberate
c. Start traffic using traffic baton 	c.1 Positioning body at slight angle facing traffic .2 Pointing traffic baton at driver from shoulder height .3 Using elbow for pivot .4 Arcing traffic baton upward and across to front of body
d. Stop traffic using hand gesture	d.1 Standing parallel to moving traffic .2 Looking right and left carefully .3 Thrusting one arm or both upward so hands are slightly above head .4 Palm (s) facing approaching traffic fingers joined .5 Repeating for stopping traffic in all directions
e. Stop traffic using Traffic Baton	e.1 Facing traffic to be stopped .2 Keeping firm grip on traffic baton with strong hand .3 Upper arm parallel to ground .4 Forearm vertical to ground .5 Arc baton across body. slightly above head, from shoulder to shoulder

17014

STEPS	KEY POINTS
f. Turn traffic using hand gesture	f.1 Stopping opposing traffic .2 Moving back towards stopped traffic .3 Allowing room in front of you for turn .4 Keeping arm and hand at stop gesture .5 Using free arm and hand to point at driver to make turn .6 Lower arm in arc across body .7 Pointing in direction of turn

g. Turn traffic using traffic baton	g.1 Stop opposing traffic (see Step 3e.) .2 Reposition body at slight angle facing traffic to turn .3 Point traffic baton at driver from shoulder height .4 Use straight arm motion .5 Arc baton downward, about stomach height .6 Point to area driver will turn to

17015

STEPS		KEY POINTS
	.2	Accurately after understanding question
	.3	Referring to proper authority or agency if answer is not known
	.4	Giving directions most easily understood
	.5	Saying "I don't know but will find out for you" or "help you to find the answer"
	.6	Following up answer by showing the way, according to departmental policy
	.7	Refraining from selling a person, place or thing.

17017

the small end. Dimension your drawing. Letter-in the title strip. After your drawing has been graded, your teacher may want you to cut out the patterns and fold them to make the cup. Use drafting tape to hold the parts together. Show the completed cup to the instructor.

WS. 67. Scoop: Refer to Illustration Sheet 32, page 113. Make patterns of the body and handle of the scoop showing necessary hems and laps. Make the pattern full size. On a piece of practice paper, design your own curves for the handle. To find the length of the handle when it is stretched out flat, measure it in small units such as $\frac{1}{4}$" so that the stretch-out will be more accurate. Dimension your drawing. Letter-in your title strip. After your drawing has been graded, your teacher may want you to cut out the patterns and fold them to make the scoop. Use drafting tape to hold the parts together. Show the completed scoop to the instructor.

WS. 68. Funnel: Refer to Illustration Sheet 33, page 115. Make a front view of the funnel as shown on the Illustration Sheet. Use this front view to obtain your measurements and make patterns of the two parts of the funnel, showing necessary hems and laps. Make the drawing full size. Dimension your drawing. Letter-in the title strip. After your drawing has been graded, your teacher may want you to cut out the patterns and tape them together to make the funnel. Show the completed scoop to the instructor.

Training Procedure No. 20

MENTALLY ILL PERSON, HANDLING

INTRODUCTORY INFORMATION:

Mentally ill persons come to the attention of law enforcement officers usually because of their actions. Their behavior is unpredictable. The officer handling the situation acts accordingly but must resort to persuasion first. A technique to handle various behavioral patterns must be devised by the officer. This is not an easy task. Duty requires that the public be protected, at the same time the officer must safeguard his own life while also treating the mentally ill person as being sick. The technique which provides for the greatest margin of safety to all concerned, and assures the safe arrival of the mentally ill person at the designated facility, is the one officers must strive towards.

An officer can help himself in becoming better equipped to handle mentally ill persons by acquiring a knowledge of the various types of mental illness. Mental and physical action or reaction vary with type and person. A better understanding of mentally ill persons may provide the officer with the necessary forewarning to successfully accomplish handling the task.

EQUIPMENT NEEDED:

Restraint device (commercial) (See Appendix 39)

GENERAL SAFETY PRACTICES:

Be constantly alert
Notify dispatcher and give exact location when leaving patrol car
Approach all persons and things with caution
Isolate person or re-position potential weapons
Be careful to use only necessary amount of force to bring person under control
Use appropriate restraint device for mentally ill

	STEPS		KEY POINTS
1.	Receive assignment and information	1.1	From dispatcher
		.2	From supervisor
		.3	From observation, notifying dispatcher or supervisor
		.4	Recording on patrol car desk pad:
		.1	Date and time received or observed
		.2	Location

17018

	STEPS		KEY POINTS
		.3	Person to be contacted or complainant and address
		.5	Requesting repeat of information not understood
2.	Proceed to scene	2.1	Arranging for pick-up of restraint equipment
		.2	Driving safely
		.3	Avoiding use of red light and siren unless otherwise instructed
		.4	Planning personal operations from known information
3.	Arrive at scene	3.1	Selecting parking place
		.2	Parking properly
		.3	Giving dispatcher exact location
		.4	Signalling "out-of-service"
		.5	Recording time of arrival
		.6	Removing ignition key
		.7	Taking required equipment
		.8	Carrying restraint equipment in weak hand behind back
		.9	Entering all premises with caution
		.10	Approaching all persons and things with caution
4.	Observe scene and situation	4.1	From a selected safe location
		.2	Noting:
		.1	Actions of mentally ill person and others
		.2	Potential weapons
		.3	Exits
		.4	Conversation (s)
		.3	Determining and calling for assistance, as required
		.4	Planning future action
		.5	Watching mentally ill person constantly

17019

STEPS		KEY POINTS
	.6	Taking immediate action to protect life or preserve the peace
5. Gather information	5.1	To assist in planning approach
	.2	Watching mentally ill person constantly
	.3	Talking to:
	.1	Persons present
	.2	Relatives or friends having personal knowledge
	.3	Mentally ill person
	.4	Using gentle voice and calm approach
	.5	Avoiding controversy
	.6	Finding out who-what-when-where-how and why
	.7	Determining, when possible if physical injury or illness is cause of mental illness
	.8	Requesting person (s) not involved to leave
	.9	Keeping strong hand side (weapon side) away from person being spoken to
	.10	Isolating mentally ill person from:
	.1	Potential weapons
	.2	Exits
	.3	Other persons, as appropriate
6. Take into custody	6.1	Searching for weapons
	.2	Using gathered information to plan approach
	.3	Having assistance from female officer or trusted adult woman for females
	.4	Using restraining devices as needed
	.5	PERSUASION FIRST - FORCE LAST

17020

LAW ENFORCEMENT OFFICER TRAINING

STEPS	KEY POINTS
a. Persuasion	a.1 Approaching slowly, cautiously and calmly
	.2 Taking position out of arm and leg reach
	.3 Using gentle voice
	.4 Watching constantly
	.5 Avoiding sudden movements
	.6 Assuring person you will help
	.7 Answering questions honestly
	.8 Ignoring insults, profanity, or actions, that will not do bodily harm
	.9 Refraining from use of words such as, hospital, crazy, nuts, looney, etc.
	.10 Requesting that he or she accompany you
	.11 Showing kindness and understanding
	.12 Keeping restraining device out of sight
b. Force	b.1 Using ONLY that amount necessary to bring person under control
	.2 Maneuvering person into best position to apply physical restraint
	.3 Using take down hold (See Appendices 35, 36, 37, 38)
	.4 Securing with restraining device (See Appendix 38)
	.5 Handcuffing as a last resort or until able to get appropriate restraint device
	.6 Using blankets, sheets, rugs, stretchers to hold violent persons
	.7 Indicating type of physical action used and reason on appropriate report form

17021

	STEPS		KEY POINTS
7.	Remove mentally ill person from scene	7.1	After searching for weapons
		.2	Transporting to appropriate facility or authority
		.3	Placing person in safest location in vehicle:
		.1	Front seat when alone
		.2	Rear seat if safety screen provided
		.3	Right rear seat next to brother officer if accompanied
		.4	Requesting relative or friend who is trusted by mentally ill person to accompany you if alone
		.5	Removing purse and spike heeled shoes from females
		.6	Having sedative administered by doctor when person is violent and great distance to be traveled
		.7	Keeping constantly alert against personal attack
8.	Process person	8.1	Watching person constantly
		.2	Being careful when alighting from patrol car
		.3	Holding or watching, as appropriate, person after removal from patrol car
		.4	Escorting to proper authority:
		.1	Committing magistrate
		.2	Admitting office of appropriate facility
		.5	Detaining at jail facility only as last resort or according to departmental procedure
		.6	Transporting to facility designated by magistrate
		.7	Following procedures of facility
		.8	Having necessary commitment or admission papers, as required
		.9	Providing information and signing forms as appropriate

17022

STEPS		KEY POINTS
	.10	Acquiring necessary forms for return to department or committing magistrate
	.11	Accompanying attendant to assist, as needed
	.12	Recording all personal property removed
	.13	Having person removing property, sign list
9. Submit reports	9.1	To supervisor as required
	.2	Before going off duty
	.3	Including all required documents and information

17023

Training Procedure No. 21

THE SERVICE AND RETURN OF COURT DOCUMENTS, HANDLING

INTRODUCTORY INFORMATION:

The courts in order to function in accordance with our system of jurisprudence use various documents. These documents either notify or have brought before the court persons or things for the purpose of administering justice.

Court documents issued for service are either criminal or civil in context. The documents are varied and the handling procedure is based on the type of document. Once the document is drawn by the court it then, usually, is an assignment for an officer to "serve and return" it. State statute governs the document from its inception. It also fixes responsibility and provides the penalty for improper service.

Special knowledge and certain skills are required to properly handle this assignment. When this knowledge and these skills are acquired, the officer is then better prepared to handle the assignment. Proper service reflects the efficiency of the officer and aids in the smooth functioning of the court in its administration of justice.

EQUIPMENT NEEDED:

Directory, City and/or County	Pen
Handcuffs	Pencil
Map, City and/or County	Uniform of the day
Notebook, Pocket	

GENERAL SAFETY PRACTICES:

Being certain all documents are executed in accordance with the law and departmental procedure.
Be constantly alert for potential personal hazards
Approach all persons and things with caution
Notifying dispatcher before leaving patrol car
Keeping arrestee under control and in view at all times
Constantly watching person being served document
Park properly

17024

LAW ENFORCEMENT OFFICER TRAINING

	STEPS		KEY POINTS
1.	Receive assignment and information	1.1	From supervisor or person in charge of document service
		.2	Asking if there are any special instructions
		.3	Recording date and time assignment received
2.	Identify document (s) and type of service	2.1	Criminal or civil (See App. 40)
		.2	Personal or residential service (See App. 41)
		.3	Check for:
		.1	Name of person to serve and return
		.2	Proper signature
		.3	Proper seal of court
		.4	All blanks are properly filled in
3.	Plan service	3.1	Using county or city directory, phone book and Post Office as sources for checking addresses
3.a	criminal	a.1	Gathering necessary information about person named in warrant, such as:
.1	warrant to arrest	.1.1	Name and alias if used
		.1.2	Physical description from head to toe
		.1.3	Location of arrestee:
		.1.3.1	Residence
		.1.3.2	Place of employment
		.1.3.3	Places often frequented
		.1.3.4	Relatives or friends homes
		a.2	Background information
		.2.1	Past record and arrests
		.2.2	Behaviorial pattern
		a.3	Requesting assistance as needed
		a.4	Consulting with proper authority when in doubt

17025

STEPS		KEY POINTS	
.b	civil	b.1	Selecting and arranging documents to save miles and time on the basis of:
		.1.1	Priority
		.1.2	Location to be served
		.2	Arranging for necessary assistance
4.	Execute service	4.1	After checking validity of document
		.2	According to document being served
		.3	Greeting recipient courteously
		.4	Being constantly alert to personal attack
		.5	Answering questions politely and referring to proper authority when answers not known
		.6	Using persuasion first to obtain compliance with court document, force only as last resort
		.7	Handcuffing as appropriate
.a	Personal	4.a.1	Establishing identity of recipient
		.a.2	Following instructions according to type of document, EXAMPLES:
		.a.2.1	Reading injunction clauses
		.a.2.2	Padlocking establishment
		.a.2.3	Attaching property
		.a.2.4	Collecting monies
		.a.3	Handing document to person named therein
		.a.4	Recording:
		.a.4.1	Time - E.S.T. - D.S.T. or other
		.a.4.2	Date
		.a.4.3	Place if different than address listed
		.a.5	Selecting safe place to stand
		.a.6	Avoiding legal advice

17026

STEPS		KEY POINTS	
.b	Residential	4.b.1	Establishing if person named actually resides at the address listed on document, by:
		.b.1.1	Checking with neighbors
		.b.1.2	Checking with person answering door
		.b.2	Recording data according to State Statute and departmental procedure
5.	Record and return data	5.1	According to State Statute and departmental procedure
		.2	Including:
		.1	Date served
		.2	Time served
		.3	Address (if different)
		.4	Mileage
		.5	Service by whom
		.3	Returning all information and records to appropriate person
		.4	Including information useful to department

17027

WS. 69. Copper Tray: Refer to Illustration Sheet 34, page 117. Some suggested designs are given for shapes often used in copper trays. Lay out on your Work Sheet, spaces for four trays. Make your own design for each of the trays and draw them on the shapes you have selected. Make sketches and have them approved before making your final drawing.

Training Procedure No. 22

CRIME PREVENTION PROCEDURES, HANDLING

INTRODUCTORY INFORMATION:

A fundamental objective of every police agency is that of crime prevention. The procedures developed, adopted, and implemented to attain this objective helps to partially contain the crime problem facing our nation. Crime has shown an insidiously steady increase down through the years. Combating it is a tremendous task requiring the efforts and resources of all persons. However, the law enforcement officer is directly charged with this task. Subsequently, the aid of persons and things, enlisted by the officer, will contribute substantially to making his task a little easier. Education of the public in safeguarding each other and their property by reporting any incident which may be criminal will contribute most to this combat. Therefore, it can be readily noted that ach officer must strive to convince the public, that law enforcement is concerned with their welfare and property. Furthermore, that through cooperation, life, liberty, and the pursuit of happiness will have more meaning. The criminal element of our society will soon realize that total war has been declared, when crime prevention procedures are employed by the public as advocated by law enforcement.

EQUIPMENT NEEDED:

Brochures, pamphlets, etc., crime prevention techniques (see App. 42)
Card, Business (officers)
Log, Field Notebook
Report, Security Survey
Report, Unoccupied Home

GENERAL SAFETY PRACTICES:

Be certain that information is offered only to reputable persons

Making certain any quotes of the law are correct and clearly understood

17028

LAW ENFORCEMENT OFFICER TRAINING

	STEPS		KEY POINTS
1.	Learn techniques (See App. 42)	1.1	Studying specific crime and literature concerning it
		.2	Devising ways and means of preventing or deterring the criminal act
		.3	Referring to the law to substantiate technique for prevention
		.4	Utilizing all available resources for already prepared materials (See App. 42)
		.5	Committing technique to memory or recording step-by-step procedure
		.6	Discussing with brother officer (s)
2.	Approach person (s)	2.1	Greeting courteously
		.2	Speaking confidently
		.3	Explaining "why" you're there
		.4	Offering to meet with them another time if too busy
		.5	Determining their interest by questioning
		.6	Allowing person to offer their views
3.	Advocate technique	3.1	According to departmental procedure
		.2	After obtaining necessary clearance from supervisor
		.3	Offering ONLY to reputable persons
		.4	Motivating person to want to participate
		.5	Including detailed discussion so that it is clearly understood

17029

STEPS		KEY POINTS
	.6	Including any civil or physical dangers involved.
	.7	Learning necessary printed information, material, etc.
	.8	Recording name, address, telephone number, of person, date contacted and technique advised.
	.9	Using appropriate departmental forms.
4. Follow-up	4.1	Returning periodically to person advised.
	.2	Advising of any new ideas or changes in technique.
	.3	Checking on any items that may need replacement.

17030

Training Procedure No. 23

SUSPICIOUS PERSONS, HANDLING

INTRODUCTORY INFORMATION:

Prevention of crime is one of the primary responsibilities facing a law enforcement officer. Ideally, the lack of crime on the beat is the goal towards which the officer strives. One of the yardsticks of measuring an officer's ability in patrolling is the incidence of crime on his beat.

A method of suppressing crime on the beat is to handle suspicious persons. Many times the so called "routine stop" will deter the commission of a criminal act. However, it must be remembered that the individual enjoys the freedom of coming and going as he chooses. The determination of whether the individual is suspicious or not is critical. It must be based on sound procedure from the standpoints of legality and personal safety.

EQUIPMENT NEEDED:

Flashlight
Notebook, Field
Pen, Ballpoint
Pencil, Mechanical
Report, Persons (See App. 44)

GENERAL SAFETY PRACTICES:

Assume defensive stance while talking
Keep alert to movements of person
Keep hands free
Watch for associates

17031 152/

LAW ENFORCEMENT OFFICER TRAINING

STEPS		KEY POINTS
1. Approach person	1.1	As soon as possible
	.2	Unfastening holster flap or strap
	.3	Scanning area
	.4	Selecting spot for interview
	.5	Moving in from rear and/or side
	.6	Constantly watching for movements
	.7	Using peripheral vision to detect approach of associate
	.8	Using available cover to protect back or side
	.9	Watching for objects person may discard
	.10	Noting:
	.1	Dress, for identification
	.2	Physical and mental condition
	.3	Personal physical characteristics
2. Stop person	2.1	Addressing courteously as "Sir" or "Ma'am"
	.2	Stating "I would like to talk to you"
	.3	Using only enough voice volume to be heard
	.4	Standing to the right of and slightly sideways
	.5	Keeping out of arms or legs reach
	.6	Assuming defensive stance
	.7	Isolating person by moving to doorway, around corner, etc.
	.8	Identifying self by rank, name, and department
	.9	Explaining "I would like you to identify yourself"
	.1	Requesting person verbally give name, address, also to spell name
	.2	Asking for identification documents
	.3	Noting any discrepancies from verbal to document
	.10	Keeping constantly alert to personal attack
	.11	Noting any unusual appearance or action

17032

STEPS		KEY POINTS
	.12	Having person assume spread-eagle position against vertical surface if dangerous or known felon
3. Question person	3.1	Politely
	.2	Determining:
	.1	Why person is in area
	.2	Method of travel: walking, riding
	.3	How long in area
	.4	Coming from where and going where
	.5	Employed by whom and where
	.3	Maintaining defensive stance
	.4	Keeping hands free
	.5	Obtaining character check from dispatcher, as appropriate at the time
4. Record information	4.1	After or during interview, as appropriate
	.2	Being certain all information on Persons Report is obtained
	.3	Using form contained in field notebook when necessary
	.4	Location of interview including date, time, day of week
	.5	Using notebook log if satisfied person is law abiding
5. Submit report (s)	5.1	To supervisor
	.2	Using supplemental report for further explanation
	.3	Being certain reports are detailed and correct

17033

Training Procedure No. 24

DEAD ON ARRIVAL, HANDLING

INTRODUCTORY INFORMATION:

Death reported to a law enforcement agency must be investigated. The handling of a death by an officer is a task that leaves no margin for error. There are facts and determinations to be made that will present a serious challenge to the officer's ability to reconstruct what happened. The officer shall investigate by patient inquiry, observation and examination. Facts surrounding any death must be ascertained and oftentimes further corroborated by the coroner and/or a pathologist before it is listed in one of the following categories of death: Natural causes, accidental, suicide or homicide.

EQUIPMENT NEEDED:

Bags, Evidence
Camera
Clipboard
Compass
Containers
Crayon, Marking (yellow lumber)
Flashlight
Handcuffs
Knife, pocket
Notebook (with forms)
Paper, graph
Pen, Ballpoint
Pencil, Mechanical
Ruler
Tape 100' - Metal Reinforced cloth
Tape 10' - White Surface Spring steel tape

GENERAL SAFETY PRACTICES:

Be calm
Be constantly alert for personal hazards
Keep dispatcher properly informed
Be sure that you understand and are understood

STEPS		KEY POINTS
1. Receive assignment and information	1.1	From dispatcher
	.2	Acknowledging call immediately
	.3	Identifying unit and give location
	.4	From citizen, notifying dispatcher
	.5	Stopping patrol car before writing
	.6	Recording on patrol car desk pad:
	.1	Time call received
	.2	Location of scene
	.3	Person to be contacted and/or complainant and address
	.7	Requesting additional information

17034

156 / 157

STEPS		KEY POINTS
	.8	Repeating location of scene for verification by dispatcher
	.9	Acknowledge receipt of transmission
2. Proceed to scene	2.1	Immediately
	.2	Driving safely
	.3	Using most expeditious route
	.4	Using beacon light and siren as instructed
	.5	Planning personal operations based on known information
	.6	Watching for persons or vehicle fleeing scene
3. Arrive at scene	3.1	Park properly
	.2	Identifying cars parked near the scene-record license number (s)
	.3	Giving dispatcher exact location
	.4	Signaling dispatcher "Out of Service"
	.5	Recording time of arrival
	.6	Removing ignition key from patrol car
	.7	Taking required equipment
	.8	Unfastening holster flap
	.9	Alighting from patrol car with caution
	.10	Locking patrol car, as appropriate
	.11	Approaching and entering scene with caution
	.12	Being alert to personal safety hazards
	.13	Requesting everyone to remain at scene
	.14	Identifying self if in plain clothes
	.15	Determining if medical help has been summoned

17035

	STEPS		KEY POINTS
4.	Observe scene and situation	4.1	Appearing and keeping calm
		.2	Noting:
		.1	Unusual conditions or activities in area
		.2	Physical and mental condition of persons present
		.3	Weapons in the area
		.4	Being alert to conversations
		.5	Determining course of action
5.	Take action	5.1	Determining if victim is apparently dead:
		.1	Feeling for pulse or heart beat
		.2	Observe for breathing
		.3	Looking for obvious apparent cause of death
		.2	Remembering to preserve the scene
		.3	Summoning Coroner:
		.1	By notifying Dispatcher
		.1	By radio
		.2	By public service
		.3	Selecting person to call dispatcher
		.4	Standing by till coroner arrives, if death appears natural
		.5	Arresting perpetrator if on scene and evidence warrants
		.6	Continuing action if death appears unnatural continue action by:
		.1	Photographing scene
		.2	Sketching scene
		.3	Collecting and preserving evidence
		.4	Interviewing persons at scene
		.5	Requesting bystanders to leave
		.6	Recording data about witnesses
		.7	Requesting witnesses to write account of incident

17036

	STEPS		KEY POINTS
6.	Follow-up	6.1	Completing unfinished details
		6.1.1	Being certain next of kin has been notified
		.2	Locating and arresting perpetrator after warrant issued
		.3	Gathering additional facts
		.4	Leads furnished or discovered
		.5	Recording exact cause learned from coroner or pathologist, as appropriate
7.	Submit reports	7.1	According to departmental procedure
		.2	To supervisor
		.3	Including all pertinent information
		.4	Using Report of Death form (See App. 46)
		.5	Editing and reviewing before submitting

Training Procedure No. 25

EMERGENCY CARE - FIRST AID

INTRODUCTORY INFORMATION:

A law enforcement officer administers emergency care usually because he is the first person of authority to arrive at the scene. The officer should be able to give proper care until such time as professional medical help is acquired.

Emergency care procedures require special skills, techniques and knowledge. When these are learned and practiced the officer in certain instances may be able to restore breathing or heart beat, check the loss of blood and prevent shock. The saving of a human life by an officer administering proper care will win the admiration of all concerned.

EQUIPMENT NEEDED:

Blankets
First aid kit
Tourniquets
Compresses
Airways (infant and adult)

GENERAL SAFETY PRACTICES:

Keep calm
Be alert for potential personal hazards.

17038

LAW ENFORCEMENT OFFICER TRAINING

CONTROL OF BLEEDING

STEPS		KEY POINTS
1. Examine injured person	1.1	Look for obvious bleeding
	.2	Check for blood stains on clothing
2. Identify type of bleeding	2.	Each type of bleeding has symptoms which identify the type
a. Arterial	2.a.1	Blood spurting
	a.2	Bright red in color
b. Venous	b.1	Blood flows steadily from wound
	b.2	Dark red in color
c. Capillary	c.1	Blood oozes from wound
3. Stop Bleeding	3.a.1	Select pressure point between heart and wound
a. Arterial digital pressure	a.2	Exert pressure with fingers or on one of the following pressure points as appropriate to location of bleeding:
	3.a.2.1	Temporal
	2.2	Facial
	2.3	Carotid
	.4	Subclavian
	.5	Axillary
	.6	Brachial
	.7	Brachial at bend of elbow
	.8	Radial and ulnar
	.9	Femoral - groin (heel of hand)
	.10	Femoral - thigh
	.11	Popliteal - back of knee

FIGURE 1
Course of Arteries: Pressure Points

17039

LAW ENFORCEMENT OFFICER TRAINING

CONTROL OF BLEEDING

STEPS		KEY POINTS	
3.b	Direct arterial compress pressure	3.b.1	Use sterile compress if available
		.2	Use clean folded cloth if compress is not available
		.3	Place directly over wound
		.4	Apply pressure with hand or tie compress over wound
		.5	Exceptions -- not over fractures, eyes, nose or mouth
3.c	Apply tourniquet (only as last resort)	3.c	Any of the following:
		c.1	Neckties
		c.2	Belts
		.3	Handkerchiefs
		.4	Towels
		.5	Suspenders
		.6	Rubber tubing
		.7	Commercial
		.8	Other
		3.c.2	Encircle arm or leg with tourniquet at pressure point
		.3	Place hard pad or object of suitable size over the artery at pressure point
		.4	Apply pressure by tightening tourniquet
		.5	Once tourniquet is applied and tightened it should not be loosened or removed until victim is under proper medical care
		.6	Tag victim indicating a tourniquet has been applied, time and place of tourniquet
4.	Venous Bleeding		
	a. Direct pressure	4.a.1	Use sterile compress if available
		.2	Use cleanest cloth available
		.3	Place directly over wound
		.4	Apply pressure with hand or tie knot directly over wound

17040

LAW ENFORCEMENT OFFICER TRAINING

CONTROL OF BLEEDING

STEPS	KEY POINTS
b. Elevation	4.b.1 Elevate injured portion of body by placing rolled blanket or any article at hand under head, arm or leg depending on location of injury
c. Cold applications	4.c.1 Apply to body in region of injury .2 Not into the wound .3a Use ice bag if available .b Cold pack - commercial item, comes in plastic bag that when squeezed causes chemicals to mix and bag becomes cold .c Cloth soaked in cold water .d Any cold object - metal, etc., wrapped in cloth

17041

LAW ENFORCEMENT OFFICER TRAINING

PHYSICAL SHOCK

STEPS		KEY POINTS
1. Look for symptoms of shock	1.1	Face pale, with anxious or dull expression
	.2	Eyelids droop if open; eyes are dull and pupils dilated
	.3	Patient may be partly or totally unconscious
	.4	Skin is cold and covered with clammy sweat, particularly hands and forehead
	.5	Patient feels cold and may have a chill; temperature subnormal
	.6	Pulse is weak and rapid
	.7	Breathing is shallow and may be irregular
	.8	Patient is stupid and takes little interest in things about him
	.9	If internal bleeding is present, patient will be restless; if conscious, he complains of clouded vision, dizziness and thirst
	.10	He may answer questions slowly or apparently fail to understand
	.11	Nausea and vomiting often occur
2. Treat usual form of shock	2.1	Position victim:
	.1.1	Place victim in a comfortable position
	.2	Lying down if possible
	.3	Head level with rest of body
	.4	Elevate feet of victim
	.5	Remove all foreign bodies from the victim's mouth, false teeth, gum, etc.
	.6	Loosen tight clothing from neck, chest and waist

17042

STEPS	KEY POINTS
	2.2 Conserve body heat: .1 Cover victim with blanket or other material, placing blanket under victim as well as over him
	2.3.1 Use stimulants: .1 Aromatic spirits of ammonia .2 Coffee or tea if possible and victim is conscious .3 Oxygen if available
2.a Skull fracture or hemorrhage	2.a.1 Note bleeding or swelling of: .1 Nose .2 Ears .3 Mouth .4 Eyes .5 Other part of head 2. Elevate head above level of feet 3. Apply cold compress to swelling or internal bleeding
.b Sunstroke or heat prostration	2.b.1 Examine victim by: .1 Observing to see if face is flushed .2 Feel forehead for abnormal temperature .2 Place in shade or cooler location .3 Apply cold application to body

17043

LAW ENFORCEMENT OFFICER TRAINING

MOUTH TO MOUTH RESUSCITATION

STEPS	KEY POINTS	
1. Check Breathing	1.1	Victim unconscious and not breathing
	.2	Victim gasping for breath
	.3	Choking and blocked air passage
2. Position victim	2.1	Move victim cautiously
	2.1.1	Place on back if possible,
	1.2	Turn face up
3. Clean victim's throat	3.1	Turn head to side
	.2	Insert finger(s) in mouth
	.3	Scoop matter out (see figure 1)
	.4	Grasp hard object with fingers to remove
4. Open air passage (preferred method)	4.1	Place head in sniffing position, as far back as possible so the neck is extended
	.2	Hold lower jaw up
	.3	Insert thumb between the victim's teeth and grasp the lower jaw at the midline (see figure 2)
	.4	Lift lower jaw forcefully upward so that the lower teeth are higher than upper teeth
	.5	Hold the jaw in this position as long as victim is unconscious
5. Open air passage (alternate method)	5.1	Place head in sniffing position as far back as possible so the neck is extended
	.2	With both hands grasp the angles of the lower jaw just beneath the ear lobes (see figure 3)
	.3	Lift lower jaw forcefully upward so the lower teeth are higher than the upper teeth

FIGURE 1

FIGURE 2

FIGURE 3

17044

LAW ENFORCEMENT OFFICER TRAINING

MOUTH TO MOUTH RESUSCITATION

STEPS	KEY POINTS	
	5.4	If the lips are shut, push the lower lip down gently with the thumbs, but never drop the chin
	.5	Hold the jaw in this position as long as victim is unconscious
6. Administer mouth to mouth breathing (preferred method)	6.1	Make certain the passageway is open
	.2	Squeeze nostrils shut
	.2.1	Use thumb and index finger of free hand (see figure 4)
	.3	Take a deep breath
	.4	Place your mouth over victim's mouth
	.5	Exhale your air into victim's mouth
	.6	Watch victim's chest to make certain it rises
	.6.1	Stop forcing air into victim's mouth when chest rises
	.6.2	Quickly remove your mouth and let victim exhale
	.7	Repeat inflations 15 to 20 times per minute
7. Administer mouth to mouth breathing (Method for infants)	7.1	Make certain air passageway is open
	.2	Place your mouth over victim's nose and mouth (see figure 5)
	.3	Take a shallow breath
	.4	Gently exhale air into victim's mouth
	.4.1	Be careful not to force air too hard
	.5	Repeat inflations 15 to 20 times per minute

FIGURE 4

FIGURE 5

17045

LAW ENFORCEMENT OFFICER TRAINING

MOUTH TO MOUTH RESUSCITATION

STEPS	KEY POINTS
7.a Insert Breathing Tube	7.a.1 Infant, child or adult as appropriate (see figure 6)
	.2 Take position behind the victim's head
	.3 Tilt head back (sniffing position)
	.4 Open victim's mouth
	.5 Check mouth for any obstructions and clear
	.6 Pull tongue to lower lip with thumb and index finger and hold while inserting breathing tube
	.7 Insert breathing tube with contour following roof of mouth
	.7.1 Adult victim, long end of breathing tube
	.2 Infant or child, short end of breathing tube
	.3 Flange resting on victim's lips
	.8 Press victim's nostrils (see figure 7) together with large part of thumbs
	.9 Seal victim's mouth by pressing down on flange of breathing tube with fingers or thumbs
7.b Administer mouth to tube breathing	7.b.1 Take deep breath
	.2 Place your mouth over breathing tube
	.3 Blow your air into breathing tube
	.1 Forcefully for adults
	.2 Gently for children
	.3 Small puffs from cheeks for infants
	.4 watch for chest rise
	.5 Repeat inflations 15 to 20 times per minute

FIGURE 6

FIGURE 7

FIGURE 8

17046

Training Procedure No. 12

LAW ENFORCEMENT OFFICER TRAINING

CLOSED CHEST HEART COMPRESSION

STEPS	KEY POINTS
1. Examine victim	1.1 Check for breathing and/or pulse by:
	.1 Place hand on diaphragm to detect motion
	.2 Feel carotid artery on neck for pulse (see figure 1)
	2. Check pupils of eyes for dilation and reaction to light (see figure 2)
2. Position victim	2.1 Place victim on a hard surface:
	.1 Floor
	.2 Ground
	.3 Backboard if available
3. Open air passage	3.1 Place one hand under back of neck and lift
	.2 Place other hand on forehead and tilt the head backward to maintain fully extended position
4. Inflate lungs	4.1 Use mouth to mouth resuscitation (see figure 3)
	4.2 Make two or three inflations
5. Locate victim's heart	5.1 Place index finger of one hand top of chest bone. (Sternum)
	.2 Place index finger of other hand at bottom of chest bone. (Sternum)
	.3 The heart is located directly under the lower half of chest bone. (Sternum) (see figure 4)

Training Procedure No. 12

LAW ENFORCEMENT OFFICER TRAINING

CLOSED CHEST HEART COMPRESSION

STEPS	KEY POINTS	
6. Position hands	6.1	Kneel beside victim
	.2	Place butt or heel of one hand on lower half of chest bone
	.3	The butt of hand should be along chest bone with fingers extending toward the ribs
	.4	Fingers should be extended up and not touching the ribs
	.5	Place second hand on top of first hand
7. Apply pressure a. one man operation	7.a.1	Position hands
	a.2	Keep elbows straight
	.3	Bend forward til shoulders are directly over hands
	.4	Use weight of upper body to exert pressure
	.5	Depress chest bone one and a half to two inches
	.6	Release pressure as soon as chest bone is depressed
	.7	Repeat 15 times
	.8	Administer two (2) mouth to mouth inflations after every 15 compressions
	.9	Maintain rate of 60 compressions per minute
b. two man operation	7.b.1	Same procedure as step 7 except one man administers mouth to mouth, the other closed chest compression
	.2	Maintain cycle of 5 compressions and 1 mouth to mouth inflation
	.3	Mouth to mouth should be started immediately during release of 5th compression

FIGURE 5
Placing the hands.

FIGURE 6

THE BILL OF RIGHTS

Original Ten Amendments to the Constitution with Preamble

We the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

ARTICLE I. Freedom of Religion, Speech, and the Press; Right of Assembly and Petition. Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

ARTICLE II. Right to Keep and Bear Arms. A well regulated militia, being necessary to the security of a free State, the right of the people to keep and bear arms, shall not be infringed.

ARTICLE III. Quartering of Soldiers. No soldier shall, in time of peace be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law.

ARTICLE IV. Right of Search and Seizure Regulated. The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

ARTICLE V. Rights of the Accused in Criminal Proceedings. No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

ARTICLE VI. Right to Speedy Trial, Witnesses, Etc. In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.

ARTICLE VII. Right of Trial by Jury. In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise re-examined in any court of the United States, than according to the rules of the common law.

ARTICLE VIII. Protection Against Excessive Bail and Punishments. Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishment inflicted.

ARTICLE IX. Rights Retained by the People. The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

ARTICLE X. Rights of States Under Constitution. The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

17053

APPENDIX 2

LAW ENFORCEMENT CODE OF ETHICS

As a Law Enforcement Officer, my fundamental duty is to serve mankind; to safeguard lives and property; to protect the innocent against deception, the weak against oppression or intimidation, and the peaceful against violence or disorder; and to respect the Constitutional rights of all men to liberty, equality and justice.

I will keep my private life unsullied as an example to all; maintain courageous calm in the face of danger, scorn, or ridicule; develop self-restraint; and be constantly mindful of the welfare of others. Honest in thought and deed in both my personal and official life, I will be exemplary in obeying the laws of the land and the regulations of my department. Whatever I see or hear of a confidential nature or that is confided to me in my official capacity will be kept ever secret unless revelation is necessary in the performance of my duty.

I will never act officiously or permit personal feelings, prejudices, animosities, or friendships to influence my decisions. With no compromise for crime and with relentless prosecution of criminals, I will enforce the law courteously and appropriately without fear or favor, malice or ill will, never employing unnecessary force or violence and never accepting gratuities.

I recognize the badge of my office as a symbol of public faith, and I accept it as a public trust to be held so long as I am true to the ethics of police service. I will constantly strive to achieve these objectives and ideals, dedicating myself before God to my chosen profession....law enforcement.

17054

APPENDIX 3

CANONS OF POLICE ETHICS

ARTICLE 1. PRIMARY RESPONSIBILITY OF JOB

The primary responsibility of the police service, and of the individual officer, is the protection of the people of the United States through the upholding of their laws; chief among these is the Constitution of the United States and its amendments. The law enforcement officer always represents the whole of the community and its legally expressed will and is never the arm of any political party or clique.

ARTICLE 2. LIMITATIONS OF AUTHORITY

The first duty of a law enforcement officer, as upholder of the law, is to know its bounds upon him in enforcing it. Because he represents the legal will of the community, be it local, state or federal, he must be aware of the limitations and proscriptions which the people, through the law, have placed upon him. He must recognize the genius of the American system of government which gives to no man, groups of men, or institution, absolute power, and he must insure that he, as a prime defender of that system, does not pervert its character.

ARTICLE 3. DUTY TO BE FAMILIAR WITH THE LAW AND WITH RESPONSIBILITIES OF SELF AND OTHER PUBLIC OFFICIALS

The law enforcement officer shall assiduously apply himself to the study of the principles of the laws which he is sworn to uphold. He will make certain of his responsibilities in the particulars of their enforcement, seeking aid from his superiors in matters of technicality or principle when these are not clear to him; he will make special effort to fully understand his relationship to other public officials, including other law enforcement agencies, particularly on matters of jurisdiction, both geographically and substantively.

ARTICLE 4. UTILIZATION OF PROPER MEANS TO GAIN PROPER ENDS

The law enforcement officer shall be mindful of his responsibility to pay strict heed to the selection of means in discharging the duties of his office. Violations of law or disregard for public safety and property on the part of an officer are intrinsically wrong; they are self-defeating in that they instill in the public mind a like disposition. The employment of illegal means, no matter how worthy the end, is certain to encourage disrespect for the law and its officers. If the law is to be honored, it must be honored by those who enforce it.

17055

ARTICLE 5. COOPERATION WITH PUBLIC OFFICIALS IN THE DISCHARGE OF THEIR AUTHORIZED DUTIES

The law enforcement officer shall cooperate fully with other public officials in the discharge of authorized duties, regardless of party affiliation or personal prejudice. He shall be meticulous, however, in assuring himself of the propriety, under the law, of such actions and shall guard against the use of his office or person, whether knowingly or unknowingly, in any improper action. In any situation open to question, he shall seek authority from his superior officer, giving him a full report of the proposed service or action.

ARTICLE 6. PRIVATE CONDUCT

The law enforcement officer shall be mindful of his special identification by the public as an upholder of the law. Laxity of conduct or manner in private life, expressing either disrespect for the law or seeking to gain special privilege, cannot but reflect upon the police officer and the police service. The community and the service require that the law enforcement officer lead the life of a decent and honorable man. Following the career of a policeman gives no man special perquisites. It does give the satisfaction and pride of following and furthering an unbroken tradition of safeguarding the American republic. The officer who reflects upon this tradition will not degrade it. Rather, he will so conduct his private life that the public will regard him as an example of stability, fidelity and morality.

ARTICLE 7. CONDUCT TOWARD THE PUBLIC

The law enforcement officer, mindful of his responsibility to the whole community, shall deal with individuals of the community in a manner calculated to instill respect for its laws and its police service. The law enforcement officer shall conduct his official life in a manner such as will inspire confidence and trust. Thus, he will be neither over-bearing nor subservient, as no individual citizen has an obligation to stand in awe of him nor a right to command him. The officer will give service where he can, and require compliance with the law. He will do neither from personal preference or prejudice but rather as a duly appointed officer of the law discharging his sworn obligation.

ARTICLE 8. CONDUCT IN ARRESTING AND DEALING WITH LAW VIOLATORS

The law enforcement officer shall use his power of arrest strictly in accordance with the law and with due regard to the rights of the citizen concerned. His office gives him no right to prosecute the violator nor to mete out punishment for the offense. He shall, at all times, have a clear appreciation of his responsibilities and limitations regarding detention of the violator; he shall conduct himself in such a manner as will

minimize the possibility of having to use force. To this end he shall cultivate a dedication to the service of the people and the equitable upholding of their laws whether in the handling of law violators or in dealing with the law-abiding.

ARTICLE 9. GIFTS AND FAVORS

The law enforcement officer, representing government, bears the heavy responsibility of maintaining, in his conduct, the honor and integrity of all government institutions. He shall, therefore, guard against placing himself in a position in which any person can expect special consideration or in which the public can reasonably assume that special consideration is being given. Thus, he should be firm in refusing gifts, favors, or gratuities, large or small, which can, in the public mind, be interpreted as capable of influencing his judgment in the discharge of his duties.

ARTICLE 10. PRESENTATION OF EVIDENCE

The law enforcement officer shall be concerned equally in the prosecution of the wrong-doer and the defense of the innocent. He shall ascertain what constitutes evidence and shall present such evidence impartially and without malice. In so doing, he will ignore social, political, and all other distinctions among the persons involved, strengthening the tradition of the reliability and integrity of an officer's word.

The law enforcement officer shall take special pains to increase his perception and skill of observation, mindful that in many situations his is the sole impartial testimony to the facts of a case.

ARTICLE 11. ATTITUDE TOWARD PROFESSION

The law enforcement officer shall regard the discharge of his duties as a public trust and recognize his responsibility as a public servant. By diligent study and sincere attention to self-improvement he shall strive to make the best possible application of science to the solution of crime and, in the field of human relationships, strive for effective leadership and public influence in matters affecting public safety. He shall appreciate the importance and responsibility of his office, hold police work to be an honorable profession rendering valuable service to his community and his country.

VT 011 363
Industrial Arts Curriculum Guide for the State of Wyoming Grades K-12.

Wyoming Research Coordinating Unit in Vocational-Technical Education, Cheyenne.
MF AVAILABLE IN VT-ERIC SET.
PUB DATE - Aug69 82p.

DESCRIPTORS - *CURRICULUM GUIDES; *INDUSTRIAL ARTS; *PROGRAM DESCRIPTIONS; INDUSTRIAL ARTS TEACHERS; *STATE CURRICULUM GUIDES; SECONDARY GRADES; *COURSE DESCRIPTIONS; PREVOCATIONAL EDUCATION; ELEMENTARY GRADES; CURRICULUM PLANNING

ABSTRACT - Prepared by members of the Wyoming State Industrial Arts Curriculum Committee, this guide is intended to aid Wyoming industrial arts teachers in planning and conducting improved programs on both the elementary and secondary levels. Following brief information on the philosophy of the program, goals, organizational plans, safety, personnel and shop management, and policy regarding special students, nine content areas are outlined, including: (1) drafting, (2) woodworking, (3) metalworking, (4) plastics, (5) basic electricity, (6) power mechanics and transportation, (7) home maintenance, (8) graphic arts, and (9) crafts, such as ceramics, leathercraft, and art metals. Program evaluation guidelines and an appendix containing eye safety legislation, safety color coding, and a content area bibliography are also included. (AW)

PRELIMINARY INVESTIGATION FIELD REPORT

17075

_____ _____ Department
City, State

Location
Date
Time

I *(first, middle initial, last name)*, make the following statement to *(rank, name of recorder)*, known to me to be a member of the *(name of department)*. I have been advised that prior to time of confinement, or removal from the county, I have the right to communicate with an attorney, or with a relative or other person, for the purpose of obtaining counsel or arranging bail; that thereafter I have the right to confer with my attorney privately, or with another person to arrange bail; and that I have a right to communicate with my attorney, or other person, for purpose of obtaining counsel by a reasonable number of telephone calls. I have been advised that the police, or other arresting officer, may not require me to make a statement, but that if I do, it may be used in evidence against me.

My name is *(first, middle, last name)*. I am *(number)* years old, live at *(number and street address)* in *(city)*, *(state)*. I attend *(number)* grade at *(name)* school. I am employed as a *(occupation)* by *(name of firm)* at *(number and street address)* in *(city)*, *(state)*.

(Write details in chronological order.)

I have read this statement which consists of *(number)* pages, initialed all corrections which have been made, and signed each page. I have given this statement freely and voluntarily. No threats or promises of any kind have been made to or used against me to make this statement and it is the truth. I have nothing further to add.

Signed: *(first, middle, last name)*
Date: Time:

Witnessed by:
(Signed—first, middle initial, last name—rank)

APPENDIX 21

GUIDELINES FOR DETERMINING WHO, WHAT, WHY, WHERE, WHEN AND HOW

1. Who?

   Who was the victim?
   Who made the report?
   Who discovered the crime?
   Who saw or heard something of importance?
   Who had a motive for committing the crime?
   Who committed the crime?
   Who helped him?
   Who will sign the complaint?
   Who was talked to?
   Who worked on the case?
   Who marked the evidence?
   Who received the evidence?

2. What?

   What was the nature of the crime committed?
   What actions were taken by the suspect?
   What happened?
   What do the witnesses know about it?
   What evidence was obtained?
   What was done with the evidence?
   What tools were used?
   What action did the officer take?
   What further action is needed?
   What knowledge, skill, or strength was needed to commit the crime?
   What other agencies were notified?
   What was reported but did not occur?
   What witnesses were not contacted?
   What time was the crime committed?
   What time was the crime reported?
   What was the time of your arrival?
   What time did you contact witnesses?

3. Where?

   Where was the crime discovered?
   Where was the crime committed?
   Where were the tools or weapons obtained?
   Where was the victim?
   Where was the suspect seen?
   Where was the witness?
   Where did the criminal live?
   Where did the criminal hang out?
   Where is he now?

17077

Where would he most likely go?
Where was he apprehended?
Where was the evidence marked?
Where was the evidence stored?

4. When?

When was the crime committed?
When was the crime discovered?
When were the authorities notified?
When did the authorities arrive at the scene?
When was the guilty party arrested?
When was the victim last seen?
When did help arrive?
When will the complaint be signed?

5. How?

How was the crime committed?
How did the criminal get to the scene?
How did the criminal get away?
How did the criminal obtain information in order to commit the crime?
How was the crime discovered?
How were the tools obtained?
How did you get your information regarding the crime?
How did you manage the arrest?

6. With What?

With what tools was the crime committed?
With what weapons was the crime committed?
With what means did the criminal travel to and from the scene?

a. Auto
b. Bicycle
c. Train
d. Bus
e. On foot
f. etc.

With what trade or profession are the tools associated?
With what other crime is this crime associated?

LAWS OF SEARCH AND SEIZURE

B. NECESSITY; SEARCH WITHOUT WARRANT

§ 8. Generally.—A search warrant is not necessary to the legality of searches in all cases.[18] Police officers acting in good faith and upon information which induces in them an honest belief that a person is in the act of violating the law may make a search and seizure without a warrant.[19] An officer may, without a search warrant, seize contraband goods which he sees.[20]

16. RC § 2933.31 (GC § 13430-1).

17. RC § 2933.30 (GC § 13430-10).

17089

Where property held illegally is not in sight of the officer, however, there must be probable cause for the search.[1] In the absence of such probable cause, the search is illegal,[2] even though it results in the discovery of contraband. An officer cannot act on a mere venture or exaggerated suspicion,[3] and after-acquired knowledge cannot legalize a search which was unlawful when made.[4] There must be such suspicious circumstances or such surrounding conditions that a reasonably prudent man would believe the person passing guilty of crime.[5] Officers without previous knowledge and without any information that would induce an honest belief that the defendant was violating the law cannot seize and search a person unless they have a search warrant and have previously arrested him.[6]

632, 141 NE 92; Dunning v Cincinnati, 21 ONP NS 468, 29 ODNP 472, affd by ct of app, m c o, m d p err sustained 18 OLR 24.

1. § 15, infra.

2. Bock v Cincinnati, 43 O App 257, 10 OL Abs 436, 183 NE 119, error dismd 124 OS 667, 181 NE 888.

The search of a person without probable cause or reasonable ground to believe that the person searched was committing a violation of law is unlawful unless the requirements of the statute, regulating the issuance of a search warrant have been complied with. State v Chick, 31 ONP NS 313, 15 OL Abs 529.

3. Cincinnati v Wagner, 27 ONP NS 445. In this case, the view is taken that the act of an officer, upon seeing a person under the influence of liquor and staggering and with the proverbial "bulge," in taking hold of his arm and feeling of the "bulge," which proves to be intoxicants, is not on probable cause.

4. Cincinnati v Fay, 27 ONP NS 520.

5. Rasey v Ciccolino, 1 O App 194, 18 OCC NS 331, 34 OCC 294. In this case, it appeared that the officers were warned that a certain fugitive was expected to get off of a train, and a police officer subsequently saw a man peaceably walking along the railroad track, but who did not answer the description of the fugitive, and there was nothing suspicious about him, and no indication that he even got off the train, and the court held that the police officer had no authority to stop him.

6. Cincinnati v Fay, 27 ONP NS 520, wherein it appeared that the officers entered a cigar store and saw the defendant talking with several men, and after he left them they seized him and searched his pockets and found a memorandum of a wager upon a horse race, without having previously placed him under arrest and without intending to place him under arrest unless they found the slip of paper, and wherein it appeared that they had no previous knowledge of the fact that he was carrying a race horse slip or any information that would induce an honest belief that the defendant was in the act of violating the law.

An officer is not entitled to search a person or premises without a search warrant unless he has information concerning a violation of law or sees the violation, and where officers arrest a person who had not violated any statute, law, or ordinance, or done anything which would give a reason to make an arrest, the arrest and search are unlawful. State v Mendel (Mun) 5 O Ops 311.

17090

The legality of a search without a warrant must be raised in the trial court.[7]

Searches for dead bodies without a warrant, but with the same power as officers executing a warrant, are authorized by statute under certain conditions.[8]

§ 9. Search Incident to Arrest.—Often, a search warrant is used for the purpose of procuring evidence of crime only and at a time when the offender is in custody,[9] and the right, without a search warrant, to search a person after a valid arrest, is well recognized.[10] Officers who have lawfully arrested a person may remove contraband property from his person, and if police officers find a person in possession of that which constitutes a violation of law and he puts the things unlawfully possessed in his pocket, they may, upon arresting him, forcibly take such property from his possession.[11] Thus, officers who have arrested one on the charge of carrying a concealed weapon may remove a revolver from his person.[12] Likewise, a person arrested without a warrant for having in his possession horse-racing slips, may be searched and the forbidden papers seized.[13] Intoxicating liquors on the person of one lawfully arrested may be seized without a search warrant.[14] However, it seems that the search of the person of one unlawfully arrested is illegal.[15]

§ 10. Search of Vehicles and Persons in Control Thereof.—If officers see a person in or about a motor vehicle illegally possessing contraband goods, they may search him and his automobile with-

15. State v Smith (CP) 19 O Ops 454, 33 OL Abs 272.

17091

out a search warrant.[16] An officer acting in good faith and upon information which he believes to be true may lawfully search an automobile or other vehicle without first obtaining a search warrant therefor, and having found property the possession of which is a violation of law, he is warranted in confiscating the goods and arresting the person in charge.[17] Such a search is authorized, even though the officer has no previous knowledge of such violation, provided he acts in good faith and upon such information as induces an honest belief that the person in charge of the automobile is in the act of violating the law; the search and seizure under such circumstances is not unreasonable and does not transgress Article 1, § 14 of the Ohio Constitution.[18]

§ 11. Search of Buildings.—Ordinarily, a search of a building cannot be lawfully made without a warrant,[19] and this includes

16. Decker v State, 113 OS 512, 150 NE 74, 42 ALR 1151; United States v Hilsinger, 284 F 585, 1 OL Abs 324.

With reference to violation of federal laws relating to taxation of intoxicating liquor, it has been held that where circumstances present facts within the personal knowledge of investigating officers, sufficient to lead a reasonably discreet and prudent man to believe that liquor is illegally possessed in an automobile, a search and seizure of such automobile, although without warrant, is not unlawful. Scher v United States, 95 F2d 64, affd 305 US 251, 83 L ed 151, 59 S Ct 174.

17. Houck v State, 106 OS 195, 140 NE 112; Porello v State, 121 OS 280, 168 NE 135; Frazier v Semoff, 21 O App 6, 4 OL Abs 701, 152 NE 780.

Where it appeared that the person whose automobile was searched without a warrant had the reputation of being a bootlegger and had attempted to conceal his identity and that of his automobile, and the officer knew of his alleged persistent violations of the law in transporting and selling liquor, and knew the license number of his automobile, and where at the time of the search he was in the act of transporting liquor for sale contrary to law—a search under such circumstances is not unreasonable and does not violate the constitutional provision. Houck v State, 16 O App 209, affd 106 OS 195, 140 NE 112.

In a case in which officers stopped a person driving a truck, thinking that he was transporting slot machines, and he was found to be transporting intoxicating liquor in violation of law, the court said that the seizure of contraband liquor was justifiable. Dworken v State (App) 29 OLR 52, 7 OL Abs 218.

18. Houck v State, 106 OS 195, 140 NE 112.

19. Hendershot v State, 14 O App 430; Knipp v Cincinnati, 29 ONP NS 209.

It has thus been held generally, and without referring to the existence of probable cause, that a police officer without a warrant has no authority to search a junk shop for stolen goods. Neifeld v State, 3 OCC NS 551, 23 OCC 246.

Annotation: Searches and seizures by health officers without warrant. 13 ALR2d 969.

—Premises temporarily unoccupied as dwelling within provision

17092

a closed garage in the rear of the defendant's home.[20] However, there may be circumstances under which the search of a building without a warrant is permissible. If police officers are fairly certain that a house is being used for unlawful purposes, they may enter it, by force, if necessary, and make arrests therein without first securing a search warrant.[1]

If an officer is informed that there is a disturbance at a particular residence and he goes there and is admitted and finds therein contraband property, which he confiscates, the residence ceases to be a bona fide private residence, and the fact that the officer did not have a search warrant is not fatal to the proceeding.[2] Officers lawfully in a house for a particular purpose may arrest for other crimes they see being committed and seize the evidence of crime which they see,[3] but they have no authority to search the whole house, without a warrant, for evidence of other crimes.[4]

In a number of cases decided under a former intoxicating liquor statute, the opinion was expressed that when a house had lost its character as a bona fide residence it might be searched without a warrant.[5] Prohibition officers under the former intoxicating liquor laws were held justified in entering, without a warrant, a brewery engaged, under a permit from internal revenue, in the manufacture of near beer, a taxable product, and also in searching

forbidding unreasonable search of dwelling. 33 ALR2d 1430.

20. Antoszewski v State (App) 5 O Ops 264, 21 OL Abs 345, 31 NE2d 881.

The constitutional guaranty is not limited to dwelling houses proper; it extends to a garage on the residence property. Antoszewski v State, supra; United States v Slusser, 270 F 818.

1. Davis v State (App) 35 OLR 194, 10 OL Abs 550.

2. Podner v State, 19 O App 82, 3 OL Abs 228, m c o 20 OLR 611, and dismd for want of debat q 107 OS 632, 141 NE 92.

3. Cincinnati v Mills, 27 ONP NS 473.

4. Cincinnati v Mills, supra.

Where an officer was lawfully in one room of a residence for the purpose of executing a warrant of arrest of a person for disorderly conduct he has no right, upon smelling the odor of beer in the house, to search other rooms thereof without a warrant. Cincinnati v Mills, supra.

Officers at a residence for the purpose of investigating a particular crime have no authority to search the residence for intoxicating liquor. Nekruta v State (App) 31 OLR 320, 8 OL Abs 11.

5. Hornack v State, 39 O App 203, 10 OL Abs 113, 177 NE 244; Hamerick v Youngstown (App) 7 OL Abs 251; Wade v State (App) 31 OLR 104, 8 OL Abs 95; Florea v Cleveland (App) 34 OLR 484, 9 OL Abs 459; Alderman v Lakewood (App) 11 OL Abs 163.

17093

for contraband, and in seizing any contraband they found there.[6] But premises cannot be searched without a warrant and without circumstances indicating illegal trafficking in liquor merely because at a prior date the occupant of such premises was found guilty of unlawfully possessing intoxicating liquor on such premises.[7]

§ 12. Consent to Search.—An officer may search premises without a warrant if it is done with the owner's consent[8] or if the owner assists in conducting the search.[9] The fact that a search warrant was based upon an insufficient affidavit is immaterial where the officers did not enter the building in question by reason of the search warrant, but were admitted by the occupant,[10] and a suspected person waived his constitutional rights by telling

6. United States v Hilsinger, 284 F 585, 1 OL Abs 324.

7. Strauss v Cleveland (App) 11 OL Abs 268, wherein the court said that merely because the owner of a residence had been found guilty of unlawfully possessing intoxicating liquor in such residence did not mean that the residence had perpetually lost its bona fide character.

8. Gilmore v State, 15 O App 432; Podner v State, 19 O App 82, 3 OL Abs 228, m c o 20 OLR 611, dismd for want of debat q 107 OS 632, 141 NE 92; Veal v State, 32 OCA 281, 45 OCC 744.

Agents and employees of the Department of Liquor Control are exempt from the provisions relative to search warrants in connection with violations of the liquor laws. Moreover, if it could be said that a liquor permittee's constitutional rights were invaded, it is such a constitutional right as could be waived, and by securing a permit and electing to operate under the Liquor Control Act, he has waived the constitutional protection, if any, of the Ohio Constitution as to the right to search his premises and seize property if found to be in violation of law. Hurless v Department of Liquor Control (App) 73 OL Abs 161, 136 NE2d 736, dismd for want of debat q 164 OS 492, 58 O Ops 331, 132 NE 2d 107, and reh den 75 OL Abs 70, 142 NE2d 667.

In Hahn v State, 38 O App 461, 176 NE 164, error dismd 123 OS 675, 177 NE 585, a prosecution for murder, where the defendant, before the jury was impaneled, moved the court to require the sheriff and prosecuting attorney to return to him certain property which they had seized at or about the time of his arrest, the property seized consisting of parts of the automobile in which it was claimed by the State that the murdered man was conveyed to a creek, and where it was shown that the automobile belonged to the defendant's father and was seized upon a search by the officers with the consent of the owner of the premises on which the automobile was found, it was held that there was no error in overruling the motion for the return of the property taken, the court stating that the defendant certainly would not have the right to demand the return to him of articles which he did not own, and which were not in his possession at the time of seizure.

9. Carmosino v State (App) 27 OLR 623, 6 OL Abs 688 (gambling machines).

10. Renda v State (App) 14 OL Abs 639.

17094

the officers to search him and his car if they so desired as he had nothing illegal in his possession.[11] But the mere failure to resist the officer does not show consent.[12] For example, the statement of the owner, when told by the officers that they were there to search his premises, to "go ahead," is not a waiver of the owner's rights, but a peaceful submission to officers of the law.[13]

Consent of one person, such as an employee, does not waive the necessity of a warrant as against another person, for example, the employer.[14] Also, even assuming that a wife in the absence of her husband may waive his constitutional immunity against search of his dwelling as granted by § 14, Article 1, of the Constitution of Ohio, such waiver cannot be said to have occurred where the testimony as to the wife's assent is conflicting, and there is a probability that any assent given was by reason of the coercive influence of an officer or officers of the law.[15]

17095

FORMATION TO DISPERSE GATHERING

Squad Wedge

The squad wedge should be used when the gathering is small enough not to require more than a squad. This is used in splitting a gathering to apprehend a ringleader or just to split into smaller groups.

Squad = 12 officers - 1 command officer - 1 supervisor - (Sgt.-Cpl.) 10 Ptl.

Space between men - 1 pace to right or left - 1 pace rear - odd numbers to left - even numbers to right.

17096

The Committee is grateful for the advice and information received from other state departments of education regarding the progress that they have made in the field of industrial arts education.

Acknowledgement must also be given to those persons who have contributed so much of their time in the preparation and publication of this document.

A special acknowledgement is also due the Wyoming Research Coordinating Unit, State Department of Education, which provided the necessary funds and encouragement for the development and publishing of this guide. The original stimulus for the development of this guide was provided by Larry Erickson, Industrial Arts teacher, Torrington, Wyoming schools, via his project development proposal to the RCU.

The Curriculum Committee is extremely grateful to Donald L. Jeanroy, project coordinator, and RCU graduate research assistant, who provided the direct organizational structure, initial to accomplish the development of this guide.

FOREWORD

The Occupational Education Section of the State Department of Education is currently developing a Comprehensive Occupational Education Model for the State of Wyoming. This model includes a world of work attitude phase at the elementary school level; a career orientation phase at the junior high school level; a career exploration phase at the upper junior and lower senior high school; and a career development phase at the upper senior high and community college levels.

This Industrial Arts Guide is a working paper developed by a committee of Industrial Arts Teachers last year and will be used as a study to develop a portion of the career exploration phase.

Dr. Dean Talagan
Coord. Occupational Education
State Department of Education

APPENDIX 28

FORMATION TO DISPERSE GATHERING

Squad Diagonal Right or Left

The squad diagonal is to be used for dispersing small gatherings. Its purpose is to move people away from a wall, building or to clear a street.

17097

FORMATION TO DISPERSE GATHERING

Squad Side Wedge

This movement will prevent people from closing inside and in rear of squad. It is a variation of the squad wedge and diagonal.

17098

APPENDIX 30

FORMATION TO HOLD - DEFENSIVE

Squad Skirmish

The purpose of the squad skirmish deployment is to hold an objective taken. It is used strictly as a defensive measure.

17099

APPENDIX 31

SAMPLE FORMAT FOR REQUEST FOR DISPERSAL

This is officer_____of the_____
(name) (Police-Sheriff's Dept.)
_____ may I have your attention and cooperation. This gathering is requested to disperse so as to avoid possible injuries or arrests to any or all persons involved. You have been participating in a gathering which is in violation because it is no longer a peaceful assembly. Serious injury or a crime may result from your actions. You have_____minutes
(number)
to leave. You may leave by_____
(Name(s) of streets-exits)
I wish to thank you for your cooperation.

APPENDIX 32

SAMPLE FORMAT FOR ORDER FOR DISPERSAL

"I, officer_____ of the_____
(name) (Police-Sheriff's Dept.)
acting under authority of Section 3761.14 of the Ohio Revised Code, do command you in the name of the State of Ohio to disperse and depart to your several homes or lawful employment." You have_____minutes to disperse. (number)

ANY PERSONS REMAINING ARE SUBJECT TO ARREST.

ACKNOWLEDGEMENTS

This first edition of the Industrial Arts Curriculum Guide for the State of Wyoming has been prepared primarily to assist the industrial arts teacher in improving the quality of industrial arts instruction. It has been designed to be flexible in its scope and broad in its treatment of industrial arts content, yet limited in detail. It is intended to serve as a guide for the teacher in the preparation of instructional materials suitable for his particular situation.

This Guide was prepared by the following members of the State Industrial Arts Curriculum Committee.

Donald L. Jeanroy
Project Coordinator & RCU
Graduate Research Assistant
State Department of Education
Cheyenne, Wyoming

E. James Harris
Instructor, Ind. Arts.
University of Wyoming
Laramie, Wyoming

Don Frechette
Central High School
Cheyenne, Wyoming

Jack Dinnel
Wheatland High School
Wheatland, Wyoming

Lydall L. Lundy
Professor, Industrial Arts
University of Wyoming
Laramie, Wyoming

Farren Johnson
Big Horn High School
Big Horn, Wyoming

Ken Woelfle
Riverton Jr. High School
Riverton, Wyoming

Reuben Quinn
Big Piney High School
Big Piney, Wyoming

Richard Schuck
Green River High School
Green River, Wyoming

Charles M. Burke
Industrial Arts Consultant
State Dept. of Education
Cheyenne, Wyoming

Dwight Jundt
Sundance High School
Sundance, Wyoming

Oscar Unruh
Laramie High School
Laramie, Wyoming

Aldo Profaizer
Big Piney High School
Big Piney, Wyoming

Douglas L. Polette
Instructor, Industrial Arts
University of Wyoming
Laramie, Wyoming

Al Miner
Laramie Jr. High School
Laramie, Wyoming

Larry Dowse
Riverton Jr. High School
Riverton, Wyoming

Raymond Rutz
Big Horn High School
Big Horn, Wyoming

Dan Oliver
Dean of Occupational Education
Northwest Community College
Powell, Wyoming

APPENDIX 39

PARTIAL LIST OF COURT DOCUMENTS

Summons - Money Only
Summons - On Answer and Cross-Petition
Summons - In Action for Divorce and Alimony
Summons - On Answer and Cross Petition in Divorce
Notice to Petit Juror
Subpoena - Grand Jury
Subpoena - Duces Tecum
Subpoena - Petit Jury
Subpoena - Criminal Case
Order of Attachment
Inventory and Appraisement of Property Attached
Affidavit for Order of Delivery - In Replevin
Verdict - For Plaintiff - In Replevin
Verdict - For Defendant - In Replevin
Order of Sale
Certificate of Release and Satisfaction of Mortgage
Journal Entry. Order Approving Appraisement and for Bond
Order of Appraisement
Writ of Partition
Writ of Dower
Notice (General Form)
Warrant to Arrest on Indictment
Warrant to Arrest on Information
Warrant to Arrest
Bench Warrant
Indictment for - - - - - - - -
Petition for Habeas Corpus
Writ of Habeas Corpus - in custody
Writ of Habeas Corpus - not in custody
Notice of Application for Temporary Alimony
Praecipe for Subpoena. Civil Case
Praecipe for - - - - - - - - -
Waiver of Notice or Summons and Appearance
Waiver of Summons and Appearance - civil action
Summons - Probate Court
Subpoena - Probate Court

17107

Civil Process Service - Terms Commonly Used.

GLOSSARY:

1.	Amercement -	usually monetary penalty imposed by a court upon its own officers for neglect of duty, or failure to pay over moneys collected. In particular, the remedy against the sheriff for failing to levy an execution or make return of proceeds of sale.
2.	Answer -	in pleading, under the Codes of Civil Procedure, the answer is the formal written statement made by a defendant setting forth the grounds of his defense.
3.	Attachment -	The act or process of taking, apprehending, or seizing persons or property, by virtue of a writ, summons, or other judicial order, and bringing the same into the custody of the law; used either for the purpose of bringing a person before the court, of acquiring jurisdiction over property seized, to compel an appearance, to furnish security for debt or costs, or to arrest a fund in the hands of a third person who may become liable to pay it over.
4.	Bench Warrant -	Process issued by the court itself, or "from the bench," for the attachment or arrest of a person; either in case of contempt, or where an indictment has been found, or to bring in a witness who does not obey a subpoena.
5.	Capias - Latin	"That you take." The general name for several species of writs, the common characteristic of which is that they require the officer to take the body of the defendant into custody; they are writs of attachment or arrest.

17108

Civil Process Service - Terms Commonly Used.

6.	Constructive service of process -	Any form of service other than actual personal service: notification of an action or of some proceeding therein, given to a person affected by sending it to him in the mails or causing it to be published in a newspaper.
7.	Defendant -	the person defending or denying: the party against whom relief or recovery is sought in an action or suit.
8.	Demurrer -	the formal mode of disputing the sufficiency in law of the pleading of the other side. An objection made by one party to his opponent's pleading, alleging that he ought not to answer it, for some defect in law in the pleading.
9.	Duces Tecum - Latin "to bring with you"	the name of a certain species of writs, of which the subpoena duces tecum is the most usual, requiring a party who is summoned to appear in court to bring with him some document, piece of evidence, or other thing to be used or inspected by the court.
10.	Habeas Corpus -	(you have the body) The name given to a variety of writs, (of which these were anciently the emphatic words,) having for their object to bring a party before a court or judge.
11.	Indictment -	An accusation in writing found and presented by a grand jury, legally convoked and sworn, to the court in which it is impaneled, charging that a person therein named has done some act, or been guilty of some omission, which, by law, is a public offense, punishable on indictment.

80171 17109

Civil Process Service - Terms Commonly Used.

12.	Injunction -	A prohibitive writ issued by a court of equity, at the suit of a party complainant, directed to a party defendant in the action, or to a party made a defendant for that purpose, forbidding the latter to do some act, or to permit his servants or agents to do some act, which he is threatening or attempting to commit, or restraining him in the continuance thereof, such act being unjust and inequitable, injurious to the plaintiff, and not such as can be adequately redressed by an action at law.
13.	Mandamus -	We command. This is the name of a writ which issues from a court of superior jurisdiction, and is directed to a private or municipal corporation, or any of its officers, or to an executive, administrative or judicial officer, or to an inferior court, commanding the performance of a particular act therein specified, and belonging to his or their public, official, or ministerial duty, or directing the restoration of the complainant to rights or privileges of which he has been illegally deprived.
14.	Personal service -	Personal service of a writ or notice is made by delivering it to the person named, in person, or handing him a copy and informing him of the nature and terms of the original.
15.	Plaintiff -	a person who brings an action: the party who complains or sues in a personal action and is so named on the record.

DEN 17110

Civil Process Service - Terms Commonly Used.

16.	Praecipe -	An original writ, drawn up in the alternative, commanding the defendant to do the thing required, or show the reason why he had not done it. Also an order, written out and signed, addressed to the clerk of a court, and requesting him to issue a particular writ.
17.	Replevin -	A personal action from a delict, tort, fault, crime or misfeasance brought to recover possession of goods unlawfully taken.
18.	Residential Service -	leaving the writ or notice at the usual residence of the person named therein only after diligent effort has been put forth to establish that the person named therein does actually reside at the residence.
19.	Rule to Show Cause -	A rule commanding the party to appear and show cause why he should not be compelled to do the act required, or why the object of the rule should not be enforced.
20.	Subpoena -	The process by which the attendance of a witness is required is called a "subpoena." It is a writ or order directed to a person, and requiring his attendance at a particular time and place to testify as a witness.
21.	Summons -	A writ, directed to the sheriff or other proper officer, requiring him to notify the person named that an action has been commenced against him in the court whence the writ issues, and that he is required to appear, on a day named, and answer the complaint in such action.

017111

Civil Process Service - Terms Commonly Used.

22. Warrant -

1. A writ or precept from a competent authority in pursuance of law, directing the doing of an act, and addressed to an officer or person competent to do the act, and affording him protection from damage, if he does it.
2. Particularly a writ or precept issued by a magistrate, justice, or other competent authority, addressed to a sheriff, constable, or other officer, requiring him to arrest the body of a person therein named, and bring him before the magistrate or court, to answer, or be examined, touching some offense which he is charged with having committed.

23. Writ -

A precept in writing, couched in the form of a letter, running in the name of the king, president, or state, issuing from a court of justice, and sealed with its seal, addressed to a sheriff or other officer of the law, or directly to the person whose action the court desires to command, either as the commencement of a suit or other proceeding or as incidental to its progress, and requiring the performance of a specified act, or giving authority and commission to have it done.

APPENDIX 41

POTENTIAL SOURCES FOR PREPARED CRIME PREVENTION MATERIALS

This is not a comprehensive list of all available sources. It should be born in mind that this also provides a guide to sources of information and safety materials.

Automobile Club
Bankers Association
Better Business Bureau
Chamber of Commerce
Civil Defense
Federal Bureau of Investigation
Federal Post Office Department
Federal-State-Local Departments of Health
Federal Treasury Department
Insurance Companies
National Auto Theft Bureau
National Safety Council
Police and Sheriffs Departments
Publishers - Newspaper and others
State Bureau of Motor Vehicles
State Department of Agriculture
State Department of Commerce
State and Federal Narcotics Bureau
State Fire Marshal
State Highway Department
State Department of Liquor Control
State Department of Natural Resources
Telephone Company
Utilities

17113

SUGGESTED LIST OF CRIMES FOR WHICH PREVENTION SHOULD BE LEARNED AND ADVOCATED

This is not an exhaustive list but rather one that includes those crimes usually occurring most often. You may add your list to these.

Auto Theft
Bogus Check
Burglary
Child Molestation
Confidence Rackets
Counterfeit Money
Employee Theft
Larceny
Robbery
Shoplifting
Till-tapping

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on the brake system was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of remedial materials developed by Basic Systems, Inc. (GB)

1

The fluid distributor is used to:

- ☐ connect the master cylinder to the brake pedal
- ☐ divide the brake fluid among the four wheels
- ☐ increase the braking power
- ☐ store the brake fluid

2

CHECK the two things the master cylinder does:

- ☐ gets the stopping force from the brake pedal and gives it to the brake fluid
- ☐ makes the stopping force greater
- ☐ makes the stopping force smaller
- ☐ does the same thing the wheel cylinders do

17125

INTRODUCTION

Twentieth century America is dominated by industry. The educated man of today must be informed regarding the effect of this and all other elements of his environment. Industrial Arts is that part of the total educational program which provides the opportunity for the study of man and industry through participation in the experiences of industrial processes and techniques. It enriches other educational fields such as mathematics, science, and language arts by bringing theory and practice closer together through illustrations and examples which are industrial in nature. It leads to the development of personal aptitudes, interests, abilities, good judgment and resourcefulness through problem solving and self expression in an environment related to industry. Industrial arts education is designed to help prepare individuals to meet the requirements of today's culture.

It is intended that this publication will provide guidelines to foster continued growth and success of industrial arts education in the State of Wyoming.

THE PHILOSOPHY FOR A DYNAMIC INDUSTRIAL ARTS PROGRAM

The application of technology affects the pattern of our living and the place of the individual within our society. The interpretation of technology through applied learning is a unique contribution of industrial arts to the general education of young people.

Industrial arts provides an opportunity to satisfy a student's need to know himself and the world about him. Our nation's economic structure uses human resources, machines and materials. The inter-relationship of knowledge and skills to societal needs is necessary if society is to continue its technological advances. A well-designed program of industrial arts education provides the student with the opportunity to assemble ideas, knowledge and techniques. He experiences, through meaningful activity, the problems of applied technology.

The range of instruction in industrial arts, as presented in this curriculum guide, exposes the student to a series of instructional areas grouped to provide realistic programming and efficient arrangment of facilities. The instructional content is planned to remain a constant regardless of the school size or organization. To this end the curriculum guide for a dynamic industrial arts program for the State of Wyoming is provided.

1171

1710

3

The brake pedal is used to take the stopping force from the:

- ☐ master cylinder and give it to the wheel cylinder
- ☐ wheel cylinder and give it to the master cylinder
- ☐ driver and give it to the master cylinder

4

The power booster is between the:

- ☐ brake pedal and the master cylinder
- ☐ master cylinder and the brake line
- ☐ master cylinder and the brake shoe

5

The brake drum is used to connect the:

- ☐ brake line to the rest of the brake system
- ☐ wheel to the wheel cylinder
- ☐ wheel to the rest of the brake system

17126

6

The brake lining is used to:

- ☐ hold the wheel cylinder to stop the wheel
- ☐ push the master cylinder against the brake pedal and stop the wheel
- ☐ push against the brake drum and stop the wheel

7

The brake fluid is used to:

- ☐ carry the stopping force from the brake lining to the brake drum
- ☐ carry the stopping force from the master cylinder to the wheel cylinder
- ☐ make the brake lining turn slower

8

The brake lining is mounted on the part called the _____ .

9

When the driver steps on the brake pedal, the brake shoes are moved by the _____ .

17127

10

Brake fluid flows through the brake system in the _____.

11

The master cylinder reservoir is used to:

- ☐ make the stopping force greater
- ☐ make the stopping force smaller
- ☐ store the brake fluid

12

What part of the brake system divides the brake fluid coming from the master cylinder among the four wheels? _____

17/28

13-15

NAME the parts that the arrows point to:

17129

1

PREVIEW

This part of the program will tell you about the parts used to stop a car. These parts are called the brake system.

NO ANSWER NEEDED

GO ON TO NEXT PAGE

17130

1

NO ANSWER NEEDED

2

You are driving the car.

The truck pulls in front of you.

What should you do?

- ☐ keep going
- ☐ stop

17131

2

stop

3

When you see the truck in front of you, you should:

- ☐ step on the brake
- ☐ step on the gas

17/32

3

step on the brake

4

Which car got into an accident?

- ☐ car A
- ☐ car B

Why didn't the other car get into an accident?

_____

17132

4

car B

driver stepped on the brake
(or similar answer)

5

You step on the brake and the car stops.

This is because the wheels:

- ☐ keep turning
- ☐ stop turning

17133

5

stop turning

6

If your brakes are working, the wheels stop when you step:

- ☐ on the brake
- ☐ on the clutch
- ☐ on the gas

17134

INDUSTRIAL ARTS AS A SEGMENT OF GENERAL EDUCATION

As each individual wisely learns to accept, use and appreciate the products of industry and to bolster this with humanitarian principles, he elevates his personal standards of living. When all the individuals lift themselves, the result is an advancement in all of society.

In this world where it is the business of industry to make usable for mankind the marvelous things that science creates, it is imperative that the education of each child include some interpretation of industry to him. The industrial arts of today and tomorrow should be designed to fulfill this mission. To the hordes of energetic, young personalities who daily stream through our public schools, the industrial arts must emphasize its relationship to general education. Everyone needs to sample its offerings, everyone needs to have industry interpreted to him both manipulatively and informationally, because there is no escaping the fact that modern peoples live in an industrial culture. However, industrial arts reaches even further than this. From the large group of humans engaged in the business of learning, many will desire more than a sampling of the atmosphere of industry. There are phases of the practical arts geared to meet their needs also. Industrial arts penetrates the industrial fields and affords opportunities for greater exploration, application and interpretation of industry for those who desire it. Here one major point of emphasis emerges. Industrial arts must never be considered a 'special' subject taught by a 'special' teacher.

In the language of our present generation, such terms as fiberglas, television, geiger counter, transistor and space satellite are commonplace. Technical as these items may be in fact, they are all fabricated from the raw materials of the earth through the efforts of science and industry. In short, industrial arts is the study of the basic products, processes, operations, materials and problems of industry and today's world. Industrial arts is the study of the factors within our present society.

1711

0151

6

on the brake

7

You push your hand against a bicycle wheel that is turning.

The wheel will:

- ☐ keep turning
- ☐ stop

17135

7

stop

8

This is a car wheel. It is turning.

To stop it, something has to:

- ☐ keep away from it
- ☐ push against it

17136

8

push against it

9

The arrows are pointing to two pieces of metal. If they pushed against the wheel, the wheel would:

- ☐ go faster
- ☐ keep going
- ☐ stop

17/37

9

stop

10

The force that lets you grab a wheel is put into your hand by:

- ☐ your eyes
- ☐ your muscles
- ☐ your feet

17138

10

your muscles

11

Brakes use brake fluid instead of muscles.

The brake fluid makes the pieces of metal push against the:

- ☐ inside of the wheel
- ☐ outside of the wheel

17139

11

inside of the wheel

12

A carrier of "muscle force" in the brake system is:

- ☐ brake fluid
- ☐ the wheel
- ☐ your hand

17140

12

brake fluid

13

Brake fluid is used to get the force from the:

- ☐ brake pedal to the wheel
- ☐ wheel to the brake pedal

17141

14

car B

The car hit the truck.
(or similar answer)

15

MATCH the numbers with the names:

_____ brake fluid

_____ brake pedal

_____ wheel

_____ wheel

17144

GENERAL GOALS OF INDUSTRIAL ARTS

Goal I.

To develop an insight and understanding of industry and its place in our culture.

Properly conceived, experiences relating to industry and opportunities for each student to better understand the society in which he lives are part of the common learning and total development of the learner.

Goal II.

To discover and develop talents, aptitudes, interests, and potentialities of individuals for the technical pursuit and applied sciences.

Opportunities for students to discover abilities and develop to their fullest are essential to the basic education of all youth. Efforts should be made to allow for differences in abilities, interests, and needs, and to ascertain which learning experiences are the most significant for the success of each individual.

Goal III.

To develop an understanding of industrial processes and the practical application of scientific principles.

The field of industrial arts is concerned with the study of integration of physical, chemical, and other forces with the materials and processes of industry, coupled with an active interest in the creative use of design. A program of industrial arts fosters experiments, research, exercises, and opportunities for solving various types of technical problems as well as project making.

Goal IV.

To develop basic skills in the proper use of common industrial tools, machines and processes.

Industrial arts provides students with basic skills which are relevant to industrial occupations and later may assist the individual in successful occupational adjustment. This segment of industrial arts instruction provides opportunities for developing manipulative skills, the very vehicle which students use to achieve their goals, understand industry, and discover abilities to develop to their fullest in the industrial fields.

Goal V.

To develop problem-solving and creative abilities involving the materials, processes, and products of industry.

The problem-solving approach in industrial arts involves creative thinking and allows students to define and determine logical solutions to problems and to evaluate both visually and intellectually the effectiveness of their solutions. The very nature of our laboratory setting makes possible a concrete, understandable approach to teaching problem-solving and critical thinking.

Condensed form:

A Guide to Improving Instruction In Industrial Arts, American Vocational Association, Washington, D.C.

16

NO ANSWER NEEDED

17

LOOK AT PANEL 1

The brake pedal is the part of the brake system that the driver:

- ☐ steps on
- ☐ turns

17145

17

steps on

18

LOOK AT PANEL 1

When you stop a car, brake fluid in the master cylinder is pushed.

The part that pushes the brake fluid is the:

- ☐ brake pedal
- ☐ brake wheel
- ☐ master cylinder

17146

18

brake pedal

19

LOOK AT PANEL 1

From the master cylinder, the "stopping" force is carried through the brake lines by:

- ☐ the brake pedal
- ☐ the brake fluid
- ☐ the wheel

17147

19

the brake fluid

20

LOOK AT PANEL 1

When you step on the brake pedal, the master cylinder pushes brake fluid to the four wheel cylinders.

Brake fluid reaches the wheel cylinders through the:

- ☐ brake lines
- ☐ brake pedal
- ☐ master cylinder

17148

20

brake lines

21

LOOK AT PANEL 1

What carries the "stopping" force through the brake lines?

- ☐ brake fluid
- ☐ brake pedal
- ☐ master cylinder

17149

21

brake fluid

22

LOOK AT PANEL 1

The wheel cylinder gives the "stopping" force to the brake shoe.

To do this, the wheel cylinder:

- ☐ pushes against the brake shoe
- ☐ pulls against the brake shoe

17150

22

pushes against the brake shoe

23

The brake shoe is something like a real shoe.

What part on the brake shoe is like the sole on a real shoe?

_____ _____

If the brake shoe moves, the brake lining:

- ☐ moves with the shoe
- ☐ does not move with the shoe

17151

23

brake lining

moves with the brake shoe

24

LOOK AT PANEL 1

The brake drum turns with the wheel, but the brake lining does not turn with the wheel.

A turning brake drum rubs against the brake lining if the brake drum and the brake lining are:

- ☐ not touching
- ☐ touching

17152

24

touching

25

LOOK AT PANEL 1

If the brake lining and brake drum touch each other:

- ☐ nothing will happen
- ☐ they will rub together

17153

25

they will rub together

26

LOOK AT PANEL 1

The brake drum is connected to the wheel.

One good way to stop the wheel from turning is to stop the:

- ☐ brake drum from turning
- ☐ brake lining from turning
- ☐ brake shoes from turning

17154

PLANS OF ORGANIZATION

In planning an industrial arts program for a particular school, consideration must be given to the potential enrollment of each individual class section. Under no circumstances, in either the junior or senior high schools, should there be enrolled more than a miximum of 21 student per class section. Depending upon the types of students involved, the type of courses being offered and the physical facilities of the school shop, the number of students may even be reduced considerably.

The junior high school industrial arts program must be exploratory in nature. It should be open to both boys and girls alike. It should include a wide variety of both vocational and avocational experiences that have been selected from a number of basic industrial fields. The course that would normally be considered a part of the junior high school industrial arts curriculum would include: introduction to drafting; hand woodworking; introductory bench and sheet metals; plastics; basic electricity-electronics; power mechanics; home maintenance; graphic arts; and a variety of craft areas. Many of the above programs can be expanded depending upon the interests and the number of students involved in the program and the shop facilities available.

It is suggested that one of the areas be developed into a production technology unit to be presented at the end of the 8th grade.

The senior high school industrial arts program must be more specialized in nature, It must give greater stress upon the vocational aspects of the curriculum being offered. The courses that would normally be considered a part of the senior high school industrial arts program would include all the aspects of the following areas; drafting; woodworking; metal working; plastics; electricity-electronics; power mechanics and transportation; home maintanence; graphic arts; and crafts. The full scope of such a program depends upon the interests and the number of the students involved in the program and the shop facilities available.

TEACHER LIABILITY

As programs expand and new equipment is available, the possibility of accidents will increase. What responsibilities does an instructor have in preventing accidents?

AA. Two kinds of accidents are likely to occur. First a pure accident is one considered to be beyone the power of the instructor to prevent. Second, a negligent accident is one that should have been prevented and may be considered as willful negligence.

Because the latter type of accident can easily occur, a high degree of supervision is always necessary. This is particularily true when consideration is given to the fact that a minor student is not considered to have the same reasoning power as an adult, and therfore his actions are not judged by adult standards.

BB. An industrial arts shop teacher must assume the responsibility for the safety of the students in his shop. The teacher has a legal responsibility to provide safety instruction to the students, to instruct them in the proper use of tools and equipment and to supervise them at all times while they are in the shop.

An industrial arts teacher is always in a vulnerable position. He must protect the students at all times from potential danger. He must anticipate hazardous conditions and when a hazardous condition is evident, he must report it immediately in writing to the school administration. Then take appropriate steps to correct the condition.

When an accident occurs, it is the instructor who receives the criticism. Threefore, safety rules and regulations must be meaningful, reasonable and always enforced. Safety is not a one hour lecture. It must be emphasized constantly in the shop. A teacher must be enthusiastic about teaching safety.

26

brake drum from turning

27

LOOK AT PANEL 1

For the brake lining to touch the brake drum, what must move against the brake drum?

- ☐ brake fluid
- ☐ brake shoes
- ☐ master cylinder

17155

27

brake shoes

28

LOOK AT PANEL 1

The name of the system shown in this panel is:

- ☐ the brake system
- ☐ the suspension system
- ☐ the steering system

17156

28

the brake system

29

The brake system is used to:

- ☐ start the car
- ☐ steer the car
- ☐ stop the car

17157

29

stop the car

30

What is the name of the system shown in this drawing?

_____

17158

30

brake system

31

What is the brake system used for? _____

17159

31

to stop the car

32

The wheel is connected to:

- ☐ the brake drum
- ☐ the brake lining

17160

32

the brake drum

33

What stops turning when you stop the brake drum?

- ☐ brake lining
- ☐ wheel

17161

33

wheel

34

The part of the brake system that turns with the wheel is the _____.

17162

34

brake drum

35

DARKEN the brake drum in the drawing below:

17163

35

36

To stop the car, something must _____ against the brake drum.

17164

CC. A few general practices that would help avoid a negligent situation would include:

Never be absent from the classroom when the students are in attendance.

Never allow students to use tools and equipment in the shop that have not been provided by the school administration unless the teacher has written permission to do so from the school authorities.

Check the construction features of the shop. They must be safe. Lighting and ventilation facilities must be adequate.

Check the location of the machines. There must be no interference between the operators of the different machines. A safety zone, properly marked is essential.

Check the storage of materials and supplies. They must be properly stored.

DD. Remember that a civil jury is not made up of a professional people. The jury may not look at a situation as you would want them to do. Therefore, what are some of the questions you may have to answer in the case of an accident.

Did the instructor fail to act to protect the person injured?

Did the instructor fail to carefully evaluate the situation before hand in order to prevent the accident?

Was it possible for him to foresee that an accident would occur?

Was good supervision provided and good safety instruction taught?

Was proper care given to the tools and equipment?

Was the conduct of the instructor considered proper?

Was the instructor absent from the shop when the accident occurred?

Was the machine or tool used beyone its limitations?

Did the instructor neglect to provide safe working conditions?

Did the instructor fail to provide guards on the machines?

Did the instructor fail to obtain prompt medical care for the injured student?

The above section was compiled by:

Mr. Ernest Sones, director
Vocational Education and Practical Arts
Casper-Midwest School System

SAVE HARMLESS LEGISLATION

Wyoming Statutes Annotated (1957)

Section 44. The board of trustees of each school district within the state may save harmless and protect board members, teachers, and other personnel from financial loss arising out of any claim, demand, suit or judgment by reason of alleged negligence or other act resulting in accidential bodily injury or death to any person within or without the school building; provided, such board member, teacher, or other personnel at the time of the accident was acting in the discharge of his duties within the scope of his employment...

Section 45. The board of trustees of each school district within the state may procure a policy or policies of comprehensive liability insurance shich would save the school district harmless from financial loss arising out of any claim, deman, suit, or judgment for personal injury or death occasioned by the alleged tort of any officer, employee, or agent of the school district...

36

push

37

In this drawing, the arrow is pointing to the part of the brake system called the _____ _____.

17165

37

brake drum

38

The customer asked the serviceman a question.

Did the serviceman give the right answer?

- ☐ yes
- ☐ no

17166

38

yes

39

The brake drum is used to connect the _____ with the rest of the brake _____.

17167

39

wheel

system

40

When you want to stop the car, the brake shoe should move so that the brake lining will rub against the:

- ☐ brake drum
- ☐ brake pedal
- ☐ wheel

17168

40

brake drum

41

The car will stop if the brake lining:

- ☐ pulls the brake drum
- ☐ rubs the brake drum
- ☐ rubs the brake shoe

17169

41

rubs the brake drum

42

A

B

The brake lining is rubbing against the brake drum in:

- ☐ car A
- ☐ car B

Which car is stopping?

- ☐ car A
- ☐ car B

17170

42

car B

car B

43

MATCH the letters with the names of the parts:

_____ brake lining

_____ brake shoe

_____ drum

_____ wheel

17171

43

C

D

B

A

44

When the driver steps on the brake pedal, the brake lining pushes against the:

- ☐ brake drum
- ☐ brake shoe
- ☐ wheels

17172

44

brake drum

45

In the drawing, the arrows are pointing to the

_____ _____.

17173

45

brake lining

46

MATCH the parts with the job they do:

A. brake lining

B. brake drum

C. wheels

_____ connects wheel to rest of the brake system

_____ does the pushing to stop the car

17174

PERSONNEL/SHOP MANAGEMENT

The challenge of the increasing size of classes, the selection of course content from such a broad field, the supplies problem and the need for maintaing equipment in working condition have made shop teachers aware of the advantages of a personnel system wherein the class becomes essentially a self-governing unit. The teacher becomes an advisor, coordinator and source of information, while much of the responsibility of routine shop management is taken over by the students.

In addition to allowing more time for instruction, proper administration of the pupil personnel system offers an unusual opportunity to develop leadership qualities and desirable personal-social traits.

Two basic types of organization are commonly used by shop teachers. They include:

1. The teacher acts as general manager and delegates responsibility to various student leaders.
2. The teacher allows the students to elect, through a democratic process, those who will assume the responsibility of leadership in the maintenance of cleanliness of the shop.

Under either type of plan common duties that usually are delegated to students include:

1. Ventilation and lights
2. Shop maintenance and cleanliness
3. Stock room care
4. Area foreman
5. Tool checking
6. Finishing room care
7. Shop library supervision
8. Monitoring and assisting other students

Procurement of Supplies

Each school system has its own method of requisitioning supplies. It is the responsibility of the industrial arts teacher to familiarize himself with the method in his system in order that he may do his part in avoiding delays in delivery which may cause irritating interruptions in his program.

Issuing Materials to Students

There are many methods for issuing materials and collecting money for payment. Regardless of the method used, it is generally agreed that the teacher should not be required to handle money.

Methods employed are:

1. Punch cards purchased by the student as necessary.
2. Central office collects all fees.
3. Enrollment fee - student pays fee upon enrolling.

46

brake drum

brake lining

47

The job of brake lining is to push against the _____.

What will this do to the car's motion? _____

17175

47

brake drum

stop it

48

The brake lining is mounted on the brake shoe. In stopping the car, the brake lining is pushed against the drum by the:

- ☐ hub
- ☐ brake shoe
- ☐ wheel

171 76

48

brake shoe

49

DRAW two arrows pointing to the brake shoes.

17/77

49

50

The stopping force gets to the brake lining through the:

- ☐ brake shoe
- ☐ vibration damper
- ☐ wheel

17178

50

brake shoe

51

When a shoe's sole wears out, you replace the soles.

What do you replace when a brake shoe's linings wear out?

_____

17179

51

brake linings

52

Which part of the brake system connects the wheel to the rest of the brake system? _____

Which part of the brake system rubs against the brake drum when you step on the brake pedal? _____

What is the brake lining fastened on to? _____

17180

52

brake drum

brake lining

brake shoes

53

Did the serviceman give the correct answer?

- ☐ yes
- ☐ no

17181

53

no (The brake linings are mounted on the brake shoes. The brake shoe pushes the brake lining against the brake drum. This stops the wheel.)

54

The job of the brake shoe is to push the b_____ l_____ against the d_____.

What will this do to the car's motion? _____

17182

54

brake

lining drum

stop it

55

Now you be the serviceman and WRITE an answer to the customer's question below.

17183

55

The brake linings are on the brake shoes. The brake shoes push the linings against the brake drum and stop the wheel.

56

When the driver steps on the brake pedal, the wheel cylinder pushes the brake shoe.

Which car is stopping?

- ☐ car A
- ☐ car B

17184

Equipment Considerations

A. Use color coding/dynamics
B. Refinish benches, cabinets and machines when necessary
C. Arrange furniture and equipment for instructional efficiency and appearance
D. Keep machinery in safe working condition
E. Provide safety zones

Storage

A. Store projects in a safe place
B. Provide controlled access to materials
C. Provide effective tool storage facilites

To do a creditable job of instruction and justify the public funds expended in his department, it is necessary that the teacher maintain a tight organization in every area of the shop. It would be superfluous to describe in detail all methods used to maintain such an organization. Excellent material of this kind may be found in books and journals. Each situation requires a unique solution depending on the personality of the teacher, the existing regulations within the school administration ahd the facilities available. An effec tive procedure is for the teacher to make an inventory listing all the pertinent elements of his situation. With this in mind, the available material on shop and personnel organization should be reviewed. With this background of information the teacher can organize a program tailored to meet his and the students' needs.

SAFETY IN THE SCHOOL SHOP

Safety is not a subject that can be considered alone. In a broad sense safety must be an important and integral part of living. Considerations of safety must be foremost when choosing or adapting to an environment, when making plans for the future and in every detail of carrying out hese plans. Thus, school shop safety must not be merely a 'safety program,' but must be an important consideration in everything which goes into making the total shop program from choosing the location, building and equipment, to the everyday routine of conducting and supervising classes.

The two general causes of school shop accidents are unsafe environmental factors and unsafe human behavior.

Environmental Factors

Environmental factors include buildings, machines, tools, storage agencies, protective equipment, sanitary facilities, clothing, etc.

Buildings housing industrial arts shops should be inspected and carefully evaluated from the standpoint of safety. Hazards such as improper lighting, inadequate ventilation and poor sanitary facilities should be reported to the proper authorities. Until adequate repairs or remodeling is made, stringent rules must be adopted to reduce the possibilities of accidents from this source.

56

car A

57

When the driver steps on the brake pedal, the brake shoes and linings are pushed against the drum by the:

- ☐ driver
- ☐ wheel
- ☐ wheel cylinder

1 7185

57

wheel cylinder

58

CIRCLE the wheel cylinder in this diagram:

17186

58

59

The wheel cylinder pushes against the brake shoe. This happens because the brake fluid gives the "stopping" power to:

- ☐ the brake shoe
- ☐ the wheel
- ☐ the wheel cylinder

17187

59

the wheel cylinder

60

NAME the part that the arrow is pointing to:

NATIONAL BUREAU OF STANDARDS-1963-A

61

brake shoes

62

Brake shoes move against the drum when they are pushed by the _____.

17190

62

wheel cylinder

63

The wheel cylinder gets its force from the liquid inside the brake line.

This liquid is _____ _____.

17191

63

brake fluid

64

Force is carried from the master cylinder to the wheel cylinders by _____ _____.

17192

64

brake fluid

65

MATCH each part with the job it does:

A. brake fluid

B. brake drum

C. brake lining

D. wheel cylinder

1._____ pushes against the brake shoes to stop the car

2._____ carries stopping force from the brake pedal to the wheel cylinder

3._____ rubs against the drum to stop the car

17193

Shop and storage areas must be kept clean and uncluttered at all times and heavy material must be stored in a safe manner. Hazards that cannot be eliminated must be safeguarded by the use of effective guards, safety zones and other devices. Proper and adequate personal protective equipment such as goggles and respirators should be provided where needed. All safety equipment must be inspected frequently to see that it is in proper working order.

Human Behavior

Shop teachers must also accept the responsibility of giving safety instruction and developing safety consciousness to insure against the second general cause of accidents, unsafe human behavior. Unsafe human behavior includes improper attitudes on the part of students or teacher, lack of knowledge or skill and physical or mental defects. A competent, alert teacher can reduce accidents from these causes by careful instruction in the use of tools and equipment, insistence upon the use of safety equipment at all times and by maintaining good housekeeping for the total shop area.

A well disciplined, well managed shop where there is a genuine will on the part of both teacher and student to work so as to avoid accidents, will be a safe shop. Complete safety is possible only when everyone involved adheres to certain simple rules and, above all, exercises good judgement.

General shop safety rules that apply equally well in all areas are listed below while those peculiar to a given activity may be found under their respective areas.

General Safety Rules

A. Report all injuries to your instructor immediately.
B. Report any equipment not functioning properly.
C. Caution any student violating a safety rule. Wilful violation will result in suspension.
D. Appropriate clothing and appearance in the shop will be determined by the teacher. Loose sleeves and shirt tails must be corrected. Hair length shall be determined by the teacher.
E. Adequate eye protection equipment must be worn in the shop at all times. (see appendix)
F. Ask for help when in becomes necessary to carry large, heavy or long objects.
G. Place oil rags in covered, metal containers.
H. Keep floor clean of scraps, shavings, chips and other litter.
I. Clean up spilled liquids immediately.
J. Refrain from projecting tools or materials beyond the edge of the benches.
K. Know the location of fire extinguishers, first aid equipment and electrical power switches.

POLICY REGARDING SPECIAL STUDENTS

Special students are hereby indentified as those students who have acute emotional, mental and/or physical handicaps that do not afford them the opportunity to participate, on an equal basis, in the regular school curriculum with the other students in the school.

Regarding the activities of such special students in the industrial arts program, it is recommended that only after considerable consultation between the student's parents, the school's administrative and counseling units and the industrial arts teachers involved, and only after obtaining the approval of all the above parties, shall the student be enrolled in the industrial arts program. If at any time after admittance into the program, the teacher feels that the student's abilities and attitudes are not suited for the program, then the teacher alone has the right and responsibility to refuse the student further admission into the shop environment.

The reasons for this recommendation are:

1717

65

1. D
2. A
3. C

66

Before the braking force gets to the wheel cylinder, it passes through the fluid distributor.

The fluid distributor allows the brake fluid to go to how many wheels? _____

17194

66

4

67

Brake fluid carries the braking force to all the wheels. This happens because the fluid is split up by the:

- ☐ fluid distributor
- ☐ wheel cylinder

17195

67

fluid distributor

68

CIRCLE the fluid distributor in the diagram:

17196

68

69

The fluid distributor is used to:

to hold the brake fluid

75

NAME the part that each arrow points to:

1: _____

2: _____

3: _____

4: _____

5: _____

6: _____

17203

1. The industrial arts teachers are not trained to handle the peculiar needs of the special student in a normal school shop situation.

2. The industrial arts shop facilities are not designed to accomodate the peculiar needs of the special student.

3. The general welfare and safety of the other students in the program are often endangered.

ELEMENTARY PROGRAM

Elementary school Industrial Arts is that phase of the elementary school curriculum which provides the child with opportunities for exploration, manipulation, experimentation, and the planned use of tools, materials, and techniques appropriate to converting these materials to serve some useful purpose. Planned activities and experience include (1) the construction of projects related to and reinforcing the elementary school subject matter content and projects related to recreational and personal purposes, and (2) a study of industry with emphasis on its organization, materials, processes, occupations, products, and problems and their effect on man's cultural past and present.

General Objectives

To help children develop confidence in their ability to make useful things with their hands.

To develop avocational interest and to understand the use of leisure time.

To encourage and develop an attitude of investigation, experimentation, and creation by providing opportunities to think through problems.

To encourage children to plan and organize so that their work becomes more precise and accurate, and so that greater levels of achievement may be reached.

To provide opportunities to develop muscular coordination and to release emotional tension.

To develop an understanding of the industrial nature of society.

To develop safety values in the work and play habits of the children.

To provide the means and experiences by which children create coupled with the growing ability to accomplish something with materials and to experience the accompanies joy of accomplishment.

To develop an appreciation of good workmanship, which involves social development including dependability, self control, willingness to cooperate and work with others.

GENERAL INTRODUCTION

Purpose

Many desirable habits and attitudes should result from an intelligently planned and administered program of industrial arts. Such a program furnishes opportunities for necessary social adjustments and for the perfecting of desired manipulative skills. It also enables the teacher to observe and evaluate the interests and abilities of the child.

84

The job of the master cylinder is to make the driver's force on the brake pedal:

- ☐ greater
- ☐ less
- ☐ stay the same

17212

84

greater

85

What does the master cylinder do? _____

17213

Specific Objectives

A. To give each child varied opportunities to satisfy the urge to create and to feel the joy of accomplishment.

B. To give each child experiences that will help develop social understanding and the ability to work effectively with others either as a leader or as a member of the group.

C. To promote interesting activities that will lead to more effective use of leisure time.

D. To introduce the student to some of the changes that have been and can be made in the raw materials of his industrial world.

E. To develop independent thinking and orginality.

F. To correlate projects and ideas with specific subject areas.

Suggested Content

A. Manipulative and technical

1. Identification of common tools
2. Correct use and care of tools
3. Identification of common materials - wood, metal, etc.
4. Methods of cutting and fastening common materials.
5. Correct use of measuring devices
6. Filing common materials smooth
7. Sanding common materials smooth
8. Simple finishing procedures
   a. Shellacking
   b. Paint (water base paint)
   c. Coloring with crayons and other materials
9. Cleaning and care of brushes
10. Cutting with a knife

B. Related information

1. How tools, materials, and other supplies are manufactured
2. The selection of hand tools and materials
3. Use of various skills in industry
4. Good work habits and attitudes
5. Responsibility for clean-up and the orderly storage of tools and materials
6. Proper planning procedures
7. Safety to one's self and to others
8. Use of various skills for leisure enjoyment

Suggested Tools and Equipment

A. Hand tools

1. Claw hammers - various sizes
2. Back saws
3. Coping saws
4. Crosscut saws
5. Files - assorted
6. Compass
7. Screwdrivers
8. Pliers
9. Wood clamps
10. Knives
11. Rulers
12. Bench vises
13. File cards
14. mitre box
15. Auger bits
16. Hand drills
17. Twist drills
18. Ratchet brace
19. Try square
20. Drawing boards
21. T-squares
22. Triangles
23. Scales
24. Paint brushes
25. Eye shields

85

makes the driver's force on the brake pedal greater

86

Which arrow in the drawing points to each of the following?

1. _____ brake lining
2. _____ brake shoe
3. _____ master cylinder
4. _____ wheel cylinder

17214

master cylinder

92

Brake fluid is kept in a brake reservoir.

The brake reservoir is on top of the _____.

17220

92

master cylinder

93

DARKEN the brake reservoir in the diagram:

17201

93

94

The part used to store brake fluid is the:

- ☐ brake lines
- ☐ master cylinder
- ☐ master cylinder reservoir
- ☐ wheel cylinder

17222

94

master cylinder reservoir

95

Which part stores brake fluid for the master cylinder?

- ☐ fluid distributor
- ☐ master cylinder reservoir
- ☐ wheel cylinder

17223

B. Power tools and equipment

1. Jig saw
2. Grinder
3. Saber saw
4. Drill press
5. Portable drill

Materials

A. Soft woods - assorted sizes
B. Sheet metal - assorted sizes
C. Plastics - assorted sizes
D. Nails and screws
E. Glue
F. Finishing materials

1. Abrasive sandpaper
2. Plastic crack filler
3. Linseed oil
4. Shellac
5. Paints (water color base)
6. Steel wool
7. Paste wax

G. Leather

Suggested Projects

The instructor is urged to search for ideas in the suggested references and project books. As the ability of the pupil increases, more challenging projects or other activities should be suggested. Criterial to be considered include:

1. Contributes to the attainment of course objectives
2. Involves appropriate processes and operations withing ability of student
3. Good design
4. Within means of student
5. Within shop facilities

Safety Precautions

A. Pupils should notify the teacher if they notice any unsafe conditions in the working area.
B. Pupils should not attempt to lift heavy materils.
C. Playing or scuffling is extremely dangerous and often results in personal injury.
D. Sharp-edged and pointed tools must not be carried in pockets or allowed to protrude when placed on a bench.
E. Any injury, no matter how slight, should be reported to the teacher immediately.
F. When using a sharp-edged tool, always cut away from the body.
G. Oil, scraps of wood, and other foreign matter must be kept off the floor.
H. Be considerate of one's fellow worker.

Suggested Equipment Organization

A. The Industrial Arts laboratory

A room especially equipped for Industrial Arts activities, with supplies, tools, equipment, and working space available, similar to a craft room or a small shop, is advisable. The classes would come to this room for their Industrial Arts work and activities. Here classes have the proper atmosphere and all the materials necessary to fill individual and collective needs.

95

master cylinder reservoir

96

The arrow is pointing to the:

- ☐ brake shoe
- ☐ fluid distributor
- ☐ master cylinder reservoir

17224

96

master cylinder reservoir

97

What is the master cylinder reservoir used for? _____

17225

97

to store brake fluid

98

Some cars have parts added to the brake system to give the brakes extra power. This makes it easier to stop the car.

These cars have parts that:

- ☐ decrease the power of the brake force
- ☐ increase the power of the brake force
- ☐ remove the power of the brake force

17226

98

increase the power of the brake force

99

The power booster increases the force in the brake system.

The part which increases force is between the _____ and the _____.

17227

99

brake pedal

master cylinder

100

CIRCLE the power booster:

17228

100

101

The part shown above is the:

- ☐ master cylinder
- ☐ power booster
- ☐ wheel cylinder

17229

101

power booster

102

What is the job of the part that the arrow is pointing to?

_____

17230

102

to increase the power of the brake system

103

Cars with a part to increase the "stopping" force have power brakes.

To have power brakes, a car must have a:

- ☐ master cylinder
- ☐ power booster
- ☐ wheel cylinder

17231

103

power booster

104

A car with a power booster in the brake system has:

- ☐ no brakes
- ☐ power brakes
- ☐ regular brakes

17232

104

power brakes

105

When a car has a power booster, it has _____ brakes.

17233

B. Portable laboratory

A bench and equipment built on wheels or casters may be used. This method requires a minimum of space and expense and the teachers may borrow the portable laboratory when needed in the classroom. This unit may be kept in a storage room or the library when not in use. A suggested plan for the portable laboratory includes such features as; a work bench top of 2-inch Maple, storage space under the table, vises on the corners, tool panel that closes into the table for storage, retractable casters, and accomodations for 4 to 6 pupils at one time.

1721

105

power

106

What kind of brake system does this car have?

_____

17234

106

power brake system

107

Which car will be easier to stop? A car with:

- ☐ no brakes
- ☐ regular brakes
- ☐ power brakes

l 7235

107

power brakes

108

How do power brakes affect stopping a car? _____

17236

108

they make it easier
(or similar answer)

109

What part is added to the brake system to make it a power brake system? _____

17236

109

a power booster

110

The power booster is between the _____ and the _____.

17237

110

brake pedal

master cylinder

111

The master cylinder and the power booster (☐ are ☐ are not) the same thing.

17238

111

are not

112

COMPLETE the serviceman's answer:

L 7239

112

power booster

113

Did the serviceman give the correct answer?

- ☐ yes
- ☐ no

17240

113

yes

114

Why does a car have power brakes? _____

17244

114

to make stopping easier

115

Does the picture show a regular brake system?

- ☐ yes
- ☐ no

How do you know this? _____

17242

DRAFTING

Drafting, the universal graphic language, is of greatest importance in such areas as engineering, construction, manufacturing, and industrial processing. Drafting skills are used extensively in a variety of occupations such as; engineering, designing, technical illustration, etc. However, one need not be engaged in one of these vocations in order to benefit from experiences in the drafting field. The ability to read and understand drawings that are concerned with the assembly, installation, and operation of applicances, mechanical devices, and many common household products is necessary today. Drafting in the secondary school must be appropriate to the consumer as well as to the producer of industrial products.

General Objectives

To develop the ability to visualize and represent on paper what one sees.

To develop the ability to make working drawings in keeping with modern practices.

To give the student with an engineering or technical interest a basic experience in the universal language of industry.

To develop the ability to interpret working drawings.

INTRODUCTION TO DRAFTING

Purpose

This is intended to be an exploratory course in general drafting. Good working habits and informational topics concerning industrial practices, materials, and machines should be considered along with the manipulative aspects of drafting. The suggested material should be considered the minimum outline for a school year of 36 weeks. Shorter courses may be organized by selecting a limited number of learning units from the course.

Specific Objectives

A. To develop the habit of using drafting as a tool in the planning process involving problems of a technical nature.
B. To apply the theory of related views - orthographic projections.
C. To teach the basic skills needed in freehand sketching.
D. To introduce the use of pictorial drawing in describing objects.
E. To develop an appreciation of contour maps and their uses.

Suggested Content

A. Manipulative and technical
1. Use and care of instruments
2. Alphabet of lines
3. Acceptable norms of accuracy
4. Good dimensioning practices
5. Proper lettering techniques
6. Applied geometry in drafting
7. Methods of illustrating objects
8. Reading and construction of contour maps
9. Processes involving the planning of small buildings
10. Tracing techniques
Reproducing drawings
12. Shape description
13. Orthographic projection
14. Pictorial drawing
15. Sketching
16. Sections andConventions
17. Auxiliary views
18. Sheet metal layout
19. Working drawings
20. Detail drawings
21. Schematics
22. Charts and graphs

115

yes

It has no power booster.
(or similar answer)

116

LOOK AT PANEL 1

The panel shows a diagram of the _____ _____.

17243

116

brake system

117

What part does each arrow point to?

arrow A: _____

arrow B: _____

arrow C: _____

arrow D: _____

17244

117

wheel cylinder

brake shoe

brake lining

brake drum

118

The part of the brake system that is connected to each wheel is a:

- ☐ brake pedal
- ☐ brake shoe
- ☐ brake drum

17245

118

brake drum

119

MATCH each part with the job it does:

A. brake fluid

B. brake lining

C. master cylinder

D. wheel cylinder

1. _____ builds up the driver's force on the brake pedal

2. _____ carries force from the master cylinder to the wheel cylinders

3. _____ moves the brake shoes toward the brake drum

4. _____ rubs against the drum to stop the car

17246

119

1. C
2. A
3. D
4. B

120

The brake lining is mounted on a _____.

17247

120

brake shoe

121

Brake shoes are moved by the _____.

Force is carried through the brake system by the _____.

17248

121

wheel cylinder

brake fluid

122

Brake fluid is carried through the brake system in the

_____ _____.

The driver steps on the _____ _____.

17249

122

brake lines

brake pedal

123

The driver's force on the brake pedal is built up by the

_____ _____.

17250

123

master cylinder

124

To what part does each arrow point?

arrow A: _____

arrow B: _____

arrow C: _____

arrow D: _____

17251

124

brake pedal

fluid reservoir

master cylinder

brake lines

THIS IS THE END OF BOOK 1

17252

B. Related information

1. The importance of drafting
2. The relationship between the draftsman and the craftsman
3. Occupations that use dr fting
4. Employment opportunities
5. The selection of instruments
6. Types of tools used by the draftsman
7. Mathematics as applied to drafting

Suggested Tools and Equipment

A. Drawing Board
B. T-square
C. 30-60 degree triangle
D. 45 degree triangle
E. Architects scale (suitable scale or ruler)
F. Drafting set
G. Irregular curve
H. Draftsman's pencil sharperner
I. Lettering guide
J. Erasing shield
K. Assorted templates
L. Drafting machine

Safety Precautions

A. Provide adequate lighting and ventilation within the drafting area.
B. Handle all pointed drafting equipment appropriately.

Materials

A. Drawing paper (size, color, and quality - optional)
B. Drawing pencisl (number and grades - optional)
C. Eraser (non-grit)
D. Drafting tape
E. Sandpaper for pointing pencils
F. India ink (optional)
G. Tracing paper

Suggested Projects

This assignment of lettering and drawing plates is left to the discretion of the individual instructor. Assignments may come from the following sources: (1) actual objects, (2) textbook projects and problems (3) workbook sheets, (4) instructor-assigned drawings.

1723

post Test
page 1
Book 1

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

When a driver steps on the brake pedal, what rubs against the brake drum? _____

2

One brake line comes out of the master cylinder. It goes into a part that divides brake fluid among the four wheels. This part is the _____.

3

The power booster is between the:

- ☐ brake pedal and the master cylinder
- ☐ master cylinder and the brake line
- ☐ master cylinder and the wheel cylinder

17253

4

CHECK the two jobs of the master cylinder:

- ☐ gets stopping force from the brake pedal and gives it to the master cylinder
- ☐ gets stopping force from the master cylinder and gives it to the brake fluid
- ☐ makes the stopping force greater
- ☐ makes the stopping force smaller
- ☐ does the same thing that the wheel cylinder does

5

When the driver steps on the brake pedal, the brake shoes are moved by the _____ .

6

Force is carried to the wheel cylinders in _____ .

7

The brake linings are mounted on the _____ .

17254

8

The wheel is connected to the rest of the brake system by the _____.

9

If brake fluid leaks out of a brake line, the car will not stop because _____ is not being carried to the wheel cylinders.

10

What is stored in the master cylinder reservoir? _____

11

What is mounted to the brake shoes to move when the brake shoes move? _____

17255

12-15

LABEL each of the following parts:

IDENTIFIERS - *MANPOWER DEVELOPMENT AND TRAINING ACT PROGRAMS; MDTA PROGRAMS

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on simple DC circuits was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

MACHINE DRAFTING

Purpose

This outline is designed for the advanced student who is interested in becoming more proficient in mechanical drafting. It is especially helpful to the person who may be interested in mechnaical engineering, the metal trades, or drafting as a vocation. This material is planned to be covered in one semester.

Special Objectives

A. To give the student further instruction in drafting and the techniques of good drawing.
B. To increase one's power of visualization and constructive thinking.
C. To provide the opportunity for specialization in the area of detail and asembly drawing.
D. To introduce the student to metal fabrication processes and material use.

Suggested Content;

A. Manipulative and technical
   1. Review orthographic projection
   2. Review pictorial drawing
   3. Detail dimensioning
   4. Gears and cams
   5. Mechanical symbols
   6. Jigs and fixtures
   7. Standard bolts and nuts
   8. Standard screw threads
   9. Keys and Keyways
   10. Miscellaneous fasteners
   11. Chucks
   12. Dies
   13. Assembly drawing
      a. Detail
      b. Exploded
      c. Sections

B. Related Information
   1. Casting processes
   2. Machining processes - fillets, shrinks, machine choice
   3. Drafting and the mechanical engineer
   4. Limits and tolerances
   5. Mathematics of machine drafting
   6. Basic heat treating processes

Suggested Tools and Equipment

A. Drawing Board
B. T-square
C. 30-60 degree triangle
D. 45 degree triangle
E. Mechanical engineer's scale
F. Drafting set
G. Irregular curve
I. Erasing shield
J. Lettering guide
K. Assorted templates
L. Drafting machines

Safety Precautions

A. Provide adequate lighting and ventilation within the drafting area.
B. Handle all pointed drafting equipment appropriately.

1724

9

NAME the part that turns electricity on and off. _____

10

Electricity will <u>not</u> pass through an _____ switch.

17262

Name _____

Date _____

Starting time _____

Finishing time _____

17263

PREVIEW FRAME

This section of the program tells you how electrical parts are connected.

NO ANSWER NEEDED

GO ON TO NEXT PAGE

17264

1

NO ANSWER NEEDED

2

A line is used to represent a wire.

How many wires are shown above?

- ☐ 1
- ☐ 2
- ☐ 3
- ☐ 4

17265

2

3

3

In electricity, the above line represents a:
(CHECK ONE)

- ☐ lamp
- ☐ piece of wire
- ☐ battery

17266

3

piece of wire

4

Wires can be drawn in many shapes.

CHECK all of the above shapes that represent pieces of wire:

- ☐ A
- ☐ B
- ☐ C
- ☐ D
- ☐ E

17267

5

A

B

6

Wires are used to carry _____ .

17269

6

electricity

7

The drawing shows a lamp.

A lamp gives off:

- ☐ air
- ☐ flames
- ☐ light

17270

7

light

8

The picture represents a:

- ☐ battery
- ☐ lamp
- ☐ switch

It uses:

- ☐ electricity
- ☐ gasoline

17271

Materials

A. Drawing paper (size, color, and quality - optional)

B. Drawing pencisl (number and grade - optional)

C. Eraser

d. drafting tape

E. Sandpaper for pointing pencils or a pencil pointer

F. Tracing paper

G. India ink (optional)

H. Lettering pens

Suggested Projects

The assignment of plates is left to the discretion of the individual instructor. Asignments may come from the following sources: (1) actual objects, (2) textbook projects and problems, (3) workbood sheets, (4) instructor-assigned drawings.

1725

8

lamp

electricity

9

The lamp:

- ☐ burns up the wires
- ☐ has a round socket
- ☐ uses electricity to give off light

17272

9

uses electricity to give off light

10

The part that uses electricity to give off light is called a _____ .

17273

10

lamp

11

A wire is connected to one side of the lamp.

DRAW a wire so that it is connected to the other side of the lamp:

17274

11

12

The picture shows a BATTERY.

How many wires are connected to it? ____

17275

12

2

13

The wires are connected to a:

- ☐ lamp
- ☐ battery
- ☐ pipe

17276

13

battery

14

The place where each wire is connected to the battery is called a TERMINAL.

The terminals are located:

- ☐ at each end of the battery
- ☐ in the middle of the battery
- ☐ underneath the battery

17287

14

at each end of battery

15

Wires are connected to a battery's:

- ☐ casing
- ☐ top
- ☐ terminal

Now DRAW two wires to the correct part of the battery:

17278

15

terminal

16

CIRCLE the object below that stores and gives off electricity:

17279

16

17

You need a part that stores and gives off electricity.

CHECK the name of the part you should buy:

- ☐ headlight
- ☐ switch
- ☐ battery

17280

17

battery

18

The part in the drawing above is used to:

- ☐ destroy electricity
- ☐ hold a switch
- ☐ store and give electricity

1728

ARCHITECTURAL DRAFTING

Purpose

This course is designed for the advanced student who is interested in a specialized area of drafting. Architectural drafting is fascinating and valuable whether it is pursued as a vocation or for personal use as a future home owner. Although the suggested content is sufficient for a full year's course, the usual one semester course can be organized by selecting a limited number of units from the suggested content.

Specific Objectives

A. To teach good house planning principles to the future home owner.
B. To develop the ability to interpret drawings of building construction.
To increase the mechanical skills of the prospective architect, engineer, draftsman, or tradesman.
D. To introduce the student to construction material and methods of construction.
E. To make students aware of building codes and their importance in planning a residence.

Suggested Content

A. Manipulative and technical
1. Architectural lettering
2. Architectural styles
3. Architectural symbols
4. Footings and foundations
5. Sill construction
6. Wall construction
a. Frame
b. Masonry
c. Brick Veneer
7. Cornices
8. Roof construction
9. Stair details
10. Fireplace and chimney details
11. Utilities
a. Electrical
b. Plumbing fixtures
12. Preliminary sketches
13. Floor plan
14. Elevations
16. Kitchen and bathroom arrangements
17. Plat plan
18. Perspective
19. Models
20. Landscaping

B. Related information
1. Lumbering
2. Masonry products
3. Heating and air conditioning systems
4. New building materials
5. Plumbing problems
6. State and local building codes
7. The architect and his work
8. Pre-fabrication processes
9. Vocational opportunities (types of architectural occupations)
10. FHA standard
11. Estimating

18

store and give electricity

19

A SWITCH is shown in the drawing.

A switch has:

- ☐ one wire connected to it
- ☐ two wires connected to it
- ☐ three wires connected to it

17282

19

two wires connected to it

20

Two switches are shown above.

The arrows show that:

- ☐ electricity cannot flow through a switch
- ☐ electricity only flows through a closed switch
- ☐ electricity only flows through an open switch

17283

20

electricity only flows through a closed switch

21

The switch in the drawing above is shown in two positions.

In drawing B the switch is:

- ☐ open
- ☐ closed
- ☐ disconnected

17284

21

open

22

Electricity can pass through this switch: CLOSED

Electricity can <u>not</u> pass through this switch:  OPEN

Electricity can pass through:

- ☐ a closed switch only
- ☐ an open switch only
- ☐ both a closed switch and an open switch

17285

22

a closed switch only

23

CIRCLE the switch that electricity can <u>not</u> pass through:

17286

23

24

The picture shows the part called a _____ .

Is it open or closed? _____

17287

24

switch

open

25

DRAW the switch ARM on the wired part to show a closed switch:

17288

25

26

A switch is ON when electricity passes through it.

CIRCLE the switch below that is in the ON position:

17289

26

27

A switch has two positions to:

- ☐ make electricity hot or cold
- ☐ turn the flow of electricity on or off
- ☐ store electricity

17290

27

turn the flow of electricity on or off

28

MATCH the following:

A. lets electricity pass through it

B. stops electricity from passing through it

C. stores electricity

1. _____ closed switch

2. _____ open switch

17291

Suggested Tools and Equipment

A. Drawing board
B. T-square
D. 45 degree tra
D. 45 degree triangle
E. Architect's scale
F. Drafting set
G. Irregular curves
H. Draftsman's pencil sharpener
I. Erasing shield
J. House plan templates (1/4 inch scale)
K. Lettering guide
L. Drafting machine

Safety Precautions

A. Provide adequate lighting and ventilation within the drafting area.
B. Handle all pointed drafting equipment appropriately.

Materials

A. Drawing paper (size, color, and quality - optional)
B. Drawing pencils (number and grade - optional)
C. Eraser
D. Drafting tape
E. Sandpaper or pencil pointer
F. Tracing paper
G. India ink (optional)
H. Lettering pens

Suggested Projects

A complete set of house plans, designed and drawn by each student. Models may be required.

28

1. A

2. B

29

MATCH the following:

A. battery

B. lamp

C. wire

1. _____ stores and gives electricity

2. _____ uses electricity to produce light

17292

29

1. A

2. B

30

LOOK at the picture above.

Electricity goes to the lamp from the _____ .

17293

30

battery

31

Electricity gets from the battery to the lamp and back to the battery again through:

- ☐ signals
- ☐ pipes
- ☐ wires

17294

31

wires

32

When electricity passes through the lamp, the lamp will

_____.

17295

32

light

33

The electricity always leaves the battery at one terminal and returns to the battery at the other terminal.

In which of the above drawings is the wire correctly connected to the battery?

- ☐ A
- ☐ B

17296

33

A

34

Which drawing shows that the electricity leaves one terminal of the battery and returns to the other terminal?

- ☐ 1
- ☐ 2

Which of the above lamps will light?

- ☐ 1
- ☐ 2

34

2

2

35

A lamp can be lighted only when electricity passes through the lamp.

Which of the pictures above shows that electricity passes through the lamp?

- ☐ A
- ☐ B

17298

35

B

36

In the picture above, does electricity leave the battery at one terminal and return to the battery at the other terminal?

- ☐ yes
- ☐ no

Will the lamp light?

- ☐ yes
- ☐ no

17299

36

no

no

37

Does electricity pass through the lamp?

- ☐ yes
- ☐ no

Should the lamp light?

- ☐ yes
- ☐ no

17300

37

yes

yes

38

To light a lamp:

1) electricity must leave the battery at one terminal and return to the battery at the _____ (same/other) terminal;

2) electricity must enter the lamp at one end and leave the lamp at the _____ (same/other) end.

17301

WOODWORKING

Woodworking is one of the oldest safe activities involving common material that can be easily fashioned into useful objects. Although it began as a handicraft, woodworking now involves power-driven machines in addition to the more traditional hand tools.

Woodworking has always been of considerable interest to young people and much personal satisfaction accrues to one who constructs attractive and useful projects.

General Objectives

To develop a degree of skill in the use and care of the common tools and machines used in woodworking.
To develop an appreciation of the importance of the forest industry in our society.
To develop an appreciation of good design in products made of wood.
To develop an awareness of the occupational opportunities in the woods industries.
To encourage the development of hobby interests with wood as the medium.
To teach the student how to make and use a working drawing, compute a bill of materials and plan an orderly procedure.
To develop a consumer's or homeowner's literacy to the extent that the student can wisely select, buy, use and care for products of the woods industry.
To develop safe working practices.
To familiarize the students with modern processes and conditions encountered with the resource of wood.

Purpose

To initiate woodworking experiences at the junior high school level in shop class restricted to the use of hand tools. This area has been developed on hand tools. However, if students are given permission to proceed to the power machines in the first courses, these items should be done in the order and sequence that follows the objectives.

A. To develop a degree of skill in the use and care of the common hand tools in woodworking.
B. To develop an awareness of the principles of good design.
C. To develop the ability to identify a variety of common woods and have a knowledge of their appropriate uses.
D. To develop the ability to carry out an orderly procedure in a logical sequence.
E. Familiarization with the processes and procedures of the woodworking industry.

Suggested Content

A. Manipulative and technical
1. Identification of common tools.
2. Correct use and care of hand tools.
3. Characteristics and classification of the common hardwoods.
4. Methods of cutting and milling wood on lathes.
5. Appropriate saws for the common woods.
6. Nominal and actual sizes of lumber.
7. Kiln and air drying processes.
8. Gluing, nailing, hardware and other items.
9. Board measure and other applied mathematics.
10. Characteristics of good design.
11. Working drawings.
12. Computing a bill of materials.
13. Planning an orderly work procedure.

17316

53

54

A CIRCUIT is a series of parts connected to an electric power source.

The power source for the circuit above is the:

- ☐ lamp
- ☐ wires
- ☐ battery

17317

54

battery

55

There are three parts to the circuit in the drawing.

COMPLETE the list below:

1. wires
2. l _____
3. b _____

17318

55

lamp

battery

56

Which drawing shows parts that are <u>not</u> a circuit? ____

17319

56

B

57

You can make a circuit with the parts in the drawing by adding another part called a _____ :

17320

57

battery

58

A CLOSED CIRCUIT has electricity flowing through it.

To make a closed circuit above you should:

- ☐ add a wire
- ☐ put the switch over the battery
- ☐ close the switch

17321

Materials

A. Hardwoods and soft woods
B. Plywood
C. Masonite, pegboard, etc.
D. Dowels
E. Nails
F. Screws
G. Glue
H. Cabinet hardware
I. Finishing materials
   1. Abrasives
   2. Paste filler
   3. Plastic crack filler
   4. Linseed oil
   5. Stains
   6. Shellac
   7. Varnish
   8. Brushing lacquer
   9. Wipe-on finish
   10. Paste wax
   11. Appropriate thinners
   12. Steel wool
J. Brushes
K. Small mouldings
L. Vaneers

Safety Precautions

A. Sharp-edged and pointed tools must not be carried in pockets nor allowed to protrude when placed on a bench
B. Hand tools must be carried so as to avoid injury to the user or a fellow student.
C. Dull tools are dangerous; therefore, all tools must be kept sharp and in good condition.
D. Files must be used with handles.
E. Scraps of wood must be kept off of the floor.
F. Avoid blocking aisles with stock or projects.
G. Check tool handles regularly to make sure they are fastened securely.
H. Store finishing rags in a covered metal container.
I. Provide adequate ventilation during all finishing procedures. Particular attention must be directed to the ventilation of sanding dust.
J. Adequate eye protection equipment must be worn in the shop at all times.

Suggested Projects

Rather than supplying a list of the usual racks, lamps, holders, etcl, the teacher is urged to search for ideas in the suggested references and in project books. Criteria to be considered in project selection include:

1. Contributes to attainment of course objectives
2. Involves appropriate processes and operations
3. Within ability of students
4. Good design
5. Inexpensive
6. Within shop facilities

58

close the switch

59

An OPEN CIRCUIT is any circuit that does not have electricity flowing through it.

The circuit above is open because:

- ☐ the switch is open
- ☐ a wire is missing
- ☐ the battery needs a termianl

17322

59

a wire is missing

60

DRAW a wire in the picture below to make a closed circuit:

17323

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1-4

Next to each letter below, WRITE the name of the part that it represents in the picture above:

A: _____

B: _____

C: _____

D: _____

17330

Purpose

It is assumed that the student enrolled in advanced woodworking has developed a reasonable amount of skill in the use of hand tools and has discovered the joy and personal satisfaction of making beautiful and useful things of wood.

Specific Objectives

A. To develop a degree of skill in the use and care of the common woodworking machines.

B. To develop an appreciation of good design and workmanship in products made of wood.

C. To develop the ability to apply mathematics, science, and drawing to practical situations in the woodshop.

D. To develop an awareness of the requirements and opportunities in the woodworking trades and industries.

Suggested Content

A. Manipulative and technical

1. Review uses and care of hand tools
2. Review project planning and applied mathematics
3. Review characteristics and identification of the common cabinet woods.
4. Review elements and principles of design.
5. Correct use and care of power equipment
6. Identification of machine components and accessories.
7. Fundamental operations of power equipment.
8. Finishing and laminating procedures

B. Related information

1. Occupations in the woodworking industry
2. Employment opportunities
3. The selection of woodworking tools and equipment
4. The manufacture and use of plywood and veneers
5. Cutting and milling of lumber
6. Forest conservation
7. The manufacture of nails, screws, etc.
8. The manufacture of finishes and their characteristics
9. Trends in furniture design
10. Grading of lumber and plywood

Suggested Tools and Equipment

A. Hand tools

1. Hand tools listed in Hand Woodworking

B. Equipment

1. Circular saw
2. Jigsaw
3. Radial saw
4. Jointer
5. Band saw
6. Thickness planer
7. Wood lathes
8. Drill press
9. Shaper

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on simple schematic diagrams was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

1

Industry uses "electrical schematic diagrams" to show actual electrical circuits.

This section will teach you how symbols are used to show actual electrical circuits.

NO ANSWER NEEDED

GO ON TO NEXT PAGE

Materials

A. Materials listed in Hand Woodworking
B. Lacquer sealer
C. Lacquer
D. Rubbing compound
E. Laminating

Safety Precautions

Woodworking machines are always a potential source of danger, particularly if effective guards have not been installed. Many of the precautions to be observed around woodworking machines are common to other machine-equipped areas. Therefore, the following list includes safety precautions that apply equally well to other areas.

A. Machines are not to be operated without instructor's permission.
B. Neckties and sleeves must be removed and rolled up, respectively, when operating machinery.
C. Do not distract a student operating a machine.
D. The operator's work zone around machines must be observed.
E. Machines must be stopped before oiling, cleaning, or adjusting.
F. Appropriate aids (push sticks, push shoe, featherboard, etc.) must be kept free of excess stock.
G. Machines must be kept free of excess stock
H. Check adjustment before turning on the machine.
I. Stand clear when turning on the power.
J. Allow machine to reach full speed before using.
K. Never leave an operating machine unattended.

Suggested Projects

The instructor is urged to search for ideas in the suggested references and project books. As the ability of pupils increases, more challenging projects or other activities should be suggested. Criteria to be considered include:

1. Contributes to the attainment of course objectives
2. Involves appropriate processes and operations
3. Within ability of student
4. Good design
5. Within means of student
6. Within shop facilities

CARPENTRY

Purpose

although carpentry is normally considered a trade-vocational course, an elementary treatment has been included for shop classes in communities where the needs may not be met by the usual course in woodworking.

Specific Objectives

A. To develop a degree of skill in the use and care of the common tools used by the carpenter.
B. To develop the ability to plan and carry out basic carpentry construction techniques.
C. To develop consumer literacy to the extent that the pupil can identify and select appropriate building materials for a given job.

	Actual Part	Symbol
Switch		
Lamp		Battery		
Symbols are easy ways to show acutal parts.

DRAW the symbol for the following parts:

LAMP SWITCH

17341

2

3

Symbols are:

- ☐ different from actual parts
- ☐ the same as actual parts

An easy way to show an electrical part is to draw its
s_____.

17342

3

different from actual parts

symbol

4

Diagrams of automotive electrical systems always have:

- ☐ pictures of the parts
- ☐ symbols for the parts

This is done to make reading diagrams:

- ☐ easier
- ☐ harder

17343

4

symbols for the parts
easier

5

What is never shown on an electrical diagram?

- ☐ actual parts
- ☐ symbols

How would you compare symbols to actual parts?

- ☐ different
- ☐ the same

17344

5

actual parts
different

6

Symbols for electrical parts are used on:

- ☐ a running automobile
- ☐ diagrams of electrical systems
- ☐ pictures of real parts

17345

6

diagrams of electrical systems

7

In order to read diagrams of auto electrical systems, you must know how to read:

- ☐ make-believe parts
- ☐ make-believe symbols
- ☐ parts
- ☐ symbols

17346

7

symbols

8

GROUP A

GROUP B

Which group shows symbols?

- ☐ group A
- ☐ group B

What would you call the other group? _____

17347

8

group B

actual parts

9

The two symbols shown above are used in electrical diagrams to represent an electrical part that gives off light.

The two symbols stand for a l_____.

9

lamp

10

Figure 1

Figure 2

Figure 1 is the symbol for a _____.

What does Figure 2 stand for? _____

10

lamp

a lamp

11

A B C

Which of the above are symbols for a lamp?

- ☐ A
- ☐ B
- ☐ C

Which is a picture of a lamp?

- ☐ A
- ☐ B
- ☐ C

Suggested Content

A. Manipulative and technical

1. Identification of common tools
2. Correct use and care of hand tools and machines
3. Characteristics and identification of the common construction woods and other building materials.
4. Methods of cutting, drying, and milling lumber
5. Appropriate uses of common building materials
6. Nominal and actual sizes of lumber
7. Estimating and ordering lumber and other building materials
8. Unit measure and other applied mathematics
9. Reading and making working drawings
10. Computing bill of materials
11. Planning orderly work procedures
12. Laying out foundation for small building
13. Foundation forms
14. Mixing, pouring and finishing concrete
15. Rough framing
16. Sheathing and flooring
17. Cutting studs, plates, joists, headers and rafters
18. Exterior finishing
19. Roofing materials
20. Applying metal fasteners and hinges
21. Hanging doors
22. Setting windows
23. Modern industrial application
24. Glass care and glazing

B. Related information

1. Occupations in the carpentry business
2. Employment opportunities
3. The selection of tools and machines
4. The manufacture of fasteners, finishing materials and other supplies
5. The manufacture of plywoods, pressed wood, etc.
6. Lumbering
7. Knowledge of related fields

Suggested Tools and Equipment

A. Hand tools

1. Hand tools listed in Hand Woodworking

B. Equipment

1. Equipment listed in Advanced Woodworking

C. Portable electric equipment

Materials

There is usually little need to carry an extensive inventory of materials since the projects undertaken determine the types and amount needed and usually all supplies are readily available locally.

11

A

C

B

12

What actual part does the picture show? _____

CIRCLE the symbols for the picture:

17351

12

a lamp

13

The three symbols above stand for an electrical part that stores and gives electricity.

They are symbols for a _____.

17352

13

battery

14

CIRCLE the figure that is not a symbol for a battery:

17353

14

15

2 volts 6 volts 12 volts

The "size" of the symbol tells you how many volts the battery has.

A 12-volt battery has:

- ☐ more lines than a 6-volt battery
- ☐ less lines than a 6-volt battery

15

more lines than a
6-volt battery

16

The symbol above stands for a 6-volt battery because it has:

- ☐ 1 pair of short and long lines
- ☐ 2 pairs of short and long lines
- ☐ 3 pairs of short and long lines

17355

16

3 pairs of short and long lines

17

Each pair of lines stands for 2 volts.

Under each symbol, WRITE the number of volts that the battery has:

A. ____ volts

B. ____ volts

17

A. 2

B. 12

18

The pair of lines above stand for a _____ -volt battery.
(how many)

18

2

19

In symbols for batteries of all sizes, two volts are shown by:

- ☐ a short line and a long line
- ☐ two long lines
- ☐ two short lines

19

a short line and a long line

20

CIRCLE the symbol for a 6-volt battery:

20

21

12 volts

The symbol above stands for a 12-volt battery.

DRAW a 2-volt battery:

Safety Precautions

General safety precautions covered in Hand Woodworking and Advanced Woodworking are appropriate for a course in carpentry.

Suggested Projects

It is reasonable to expect that most projects will consist of the construction of small structures such as feeders and portable animal shelters. The selected references and farm shop books contain suggestions for projects that will meet the needs of rural as well as urban youth.

21

22

DRAW the symbol for a 6-volt battery.

22

23

Electricity always leaves a battery from one terminal and goes back into the battery at the:

- ☐ other terminal
- ☐ same terminal

23

other terminal

24

The plus sign (+) and the minus sign (-) are used in electrical diagrams to show the direction in which the electricity "flows."

CIRCLE the symbols that tell you the direction in which the electricity "flows."

17363

24

25

Electricity leaves a battery from the end marked with a plus sign.

In the symbol below, CIRCLE the end from which the electricity leaves:

17364

25

26

The plus sign (+) is next to the:

- ☐ short line
- ☐ long line

Electricity leaves the battery at the end that has a:

- ☐ long line
- ☐ short line

17365

26

long line

long line

27

Which arrow shows the direction in which the electricity flows:

☐ A

☐ B

27

A

28

DRAW an arrow under the battery to show the direction in which the electricity flows:

17367

28

29

The arrows show the direction in which electricity flows.

The electricity leaves one end of the battery, flows around the circuit, and goes back to the battery at the:

☐ other end

☐ same end

WRITE a plus sign (+) next to the terminal where the electricity leaves the battery.

WRITE a minus sign (–) next to the terminal where the electricity returns to the battery.

17368

29

other end

30

After the electricity leaves the battery, it will first pass through:

- ☐ lamp A
- ☐ lamp B

17369

30

lamp A

31

DRAW arrows around the diagram to show the direction in which the electricity flows:

The picture shows a _____ switch.

DRAW the symbol for this electrical part:

40

closed

41

The picture shows an _____ switch.

DRAW its symbol:

17380

METALWORKING

Metalworking has become more important daily to man and to his society since the discovery of metal thousands of years ago. Today the American people are enjoying more comforts than any other nation in the world. These comforts include the modern home and all of its conveniences, transportation, with its luxurious vehicles, including the automobile, streamlined trains and jet airliners and communications which are becoming more extensive, practical and workable.

All of this, not to mention the future that exists in space, is very dependent on the metals now available. There are more people employed in the metalworking industries than in any other industrial field. It is quite important, therefore, that this area of industry be included as a part of the industrial arts program.

General Objectives

To develop an appreciation of the importance of the metals industry in our society.
To develop a knowledge of the characteristics of metals.
To develop an interest in the occupational opportunities pertaining to the metal-working industry.
To develop procedures with regard to the fabrication of metals.
To develop an understanding of the fundamental characteristics of good design in metal products.
To develop a degree of skill in the use and care of metal-working tools and machines.
To develop repair and maintenance procedures which will be helpful to the consumer.
To teach the student how to plan an orderly procedure, and to make and read metalworking drawings.
To encourage the development of hobby activities with metal as the medium.

INTRODUCTORY BENCH & SHEET METAL

Purpose

Bench and sheet metal is basically a program of hand operations serving as a basis or prerequisite for other areas of metal fabrication. It is a basic activity allowing for exploration and experimentation. Rather than teaching it as a composite of the two, this unit may be separated into bench metalworking and sheet metalworking. Generally, students should be encouraged to participate in this activity before enrolling in other metalworking areas.

Specific Objectives

A. To develop the ability to identify metals and appreciate the metal processes of industry.
B. To develop a degree of skill in the operation and care of common metalworking tools.
C. To develop an appreciation of good design in metalworking.
D. To develop an awareness of the occupational opportunities in the metal industry.

Suggested Content

A. Manipulative and technical

1. Identification of tools and machines
2. Using measuring and layout tools
3. Making and reading working drawings
4. Using patterns and templates
5. Planning a project
6. Identification of metals through spark tests
7. Heat treatment
8. Cutting metals
9. Drilling, reaming and punching
10. Filing
11. Threads, and thread cutting
12. Bending, twisting and forming
13. Preparing, decorating and finishing metals
14. Removing metal by grinding
15. Care and maintance of hand tools
16. Identification of cutting fluids and compounds
17. Identification of abrasives
18. Use of metal fasteners

3. The manufacture of abrasives
4. Special thread forms and their application
5. Manufacturing process in the metal industry
6. Fabrication of metals in industry
7. Alloys in the metalworking industry
8. Assembly techniques

Suggested Tools and Equipment

A. Hand tools

1. Ball-pein hammers
2. Plastic mallets
3. Vise grips
4. Steel rules
5. Prick punches
6. Center punches
7. Scribes
8. Calipers
9. Spring dividers
10. Surface plate
11. Height gauge
12. Hacksaws
13. Chisels
14. Set of reamers
15. Rivet set
16. Pliers
17. File cards
18. Phillips screwdrivers
19. Hand drill
20. Twist drills
21. Set of pipe dies
22. Plastic eye shields
23. Screw pitch gauge
24. Twist drill gauge
25. Soldering coppers
26. Riveting hammers
27. Setting hammers
28. Bolt cutters
29. Hand reamer
30. Tubing or pipe benders
31. Pipe and adjustable wrenches
32. Micrometer combination
33. Tin snips or hand and bench shears
34. Combination, solid and steel squares
35. Set of socket or combination box and open end wrenches
36. Set of taps and die ational course and national fine.

B. Equipment

1. Machinist vises with pipe jaw accessory
2. Anvils
3. Stakes
4. Bench plate
5. Bending machine, bending jig or folks
6. Grinder
7. Wire brush
8. Buffer
9. Drill press
10. Bar folder
11. Rotary machine, combination
12. Square shear
13. Slip roll forming machine
14. Box and pan brake

Safety Precautions

A. Do not press the treadle of cutting shears when others are not clear of the machine
B. Handles must be kept on all files, hacksaws and other tools requiring them.
C. Hold work in a holding device when drilling, cutting, filing, chiseling or cutting threads.
D. Removing chips by hand is dangerous.
E. Mushrommed heads and chipped or cracked tools are very dangerous.
F. Loose hammer heads and split handles are dangerous.
G. Keep hands at a respectful distance from hammer blows.

60

Will the lamps in the circuit light up? _____

EXPLAIN your answer. _____

Materials

A. Brass pipe
B. Sheet brass
C. Black iron
D. Angle iron
E. Drill rod
F. Layout dye
G. Soft iron rivets
H. Hacksaw blades
I. Solder
J. Solder flux
K. Abrasives
l. Cutting fluids
M. Hot rolled mild steel flat stock
N. Hot rolled mild steel round stock
O. Hot rolled mild steel square stock
P. Black iron or galvinized pipe
Q. Finishing materials
R. Nuts, bolts, washers and metal screws
S. Expanded materials

Suggested Projects

There are unlimited projects in this area that may be created with a wide variety of finishing materials available. However, instead of supplying a list of the usual racks, holders, tools, etc., the teacher is urged to search for ideas in the suggested references and in project books. Criteria to be considered in project selection include:

1. Contributes to attainment of course objectives
2. Involves appropriate processes and operations
3. Within ability of students
4. Good design
5. Inexpensive
6. Within shop facilities

FOUNDRY

Purpose

Since primitive man first discovered that copper could be cast in many shapes, man has depended upon the foundry industry in its various forms. Foundry is a basic industry on which most of the other industries depend either directly or indirectly. One has only to look about his surroundings to discover the importance castings play in our industrial society. All industrial arts students should be provided with an opportunity to acquaint themselves with this very important industry.

Specific Objectives

A. To develop an appreciation of the importance of founding in industry.
B. To develop an awareness of the relationship between the foundry area and the other areas of the industrial arts curriculum.
C. To develop a degree of skill in the use of special tools and equipment used in the foundry area.
D. To develop an awareness of the strength, weight and other characteristics of common metals used in founding.

60

IDENTIFIERS - *MANPOWER DEVELOPMENT AND TRAINING ACT PROGRAMS; MDTA PROGRAMS

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on automotive electrical systems, Part I, was developed under the Manpower Development and Training Act of 1962. Contents are presented in very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

Book 4

1

What part of the electrical system stores and gives off electricity?

_____

2

Low-voltage electricity is changed to high voltage by the _____ _____.

3

Electricity is made by the _____.

4

The flow of electricity into the battery is regulated by the _____ _____.

5

The job of the starter motor switch is to close the circuit to the _____ _____.

6

When the ignition key is on the "off" position, electricity (☐ does ☐ does not) flow to the ignition coil.

7

The part that starts the engine running is the _____ .

8

The generator circuit and the starter circuit are both _____ voltage.

9

A battery that is low in electricity should be _____ .

10

When a battery gives off more electricity than it receives, we say that the battery is _____ .

1

The following three books will teach you how electricity is used in an automobile.

These books will teach you which parts use electricity and how electricity gets around in the automobile.

NO ANSWER NEEDED

GO ON TO NEXT FRAME

B. Equipment

1. Shake bag
2. Crucible or ladle
3. Grinder
4. Wire buffer
5. Pyrometer
6. Riddle
7. Flasks
8. Bellows
9. Sqrue and riser pins
10. Moulding bench
11. Mold weight
12. Patterns
13. Foundry letters
14. Crucible furnace
15. Single shank or duouble end shank

Safety Precautions

A. Wear clothing suitable for protection around the foundry furnaces.

B. Be sure work area is well ventilated.

C. Temper molding sand properly to eliminate 'blows' when metal is poured into molds.

D. Molds rammed too hard will 'blow' when they are poured

E. Do not attempt to lift excessive weight. Ask for assistance when lifting or rolling a heavy mold.

F. Stack flasks, boards and weights in an orderly manner so they will not fall.

G. Wear safety goggles when tapping furnaces, handling molton metal, or chipping a casting.

H. Keep the area around the furnace dry.

I. Damp or wet metal thrown into molten metal will cause an explosion that will make metal spatter.

J. Blow air through crucible furnace before attempting to light it.

K. Before using crucibles check them for flaws or cracks.

L. Store crucibles in a warm dry place.

M. Use properly fitted tongs and shanks when handling crucibles of molten metal.

N. Wedging pieces of metal into a crucible when charging it may crack it when metal expands.

O. Do not walk backwards when carrying molten metal.

P. Keep feet a safe distance from the mold when pouring in case of a run-out.

Q. Placing one's face over a sprue or riser may cause injury.

R. When moving molten metal, set the container down rather than dropping it in cases of emergency.

Materials

A. Foundry sand

B. Binder sand

C. Parting compound

D. Facing sand

E. Core paste

F. Core sand

G. Foundry metals

1. Aluminumable -- care must be taken when mixing different alluminum as the results are not wholly satisfactory
2. Brass
3. Lead

H. Flux

I. Buffing compound

10

LOOK AT PANEL 1

The starter gets electricity to start the car from the _____ .

10

starter motor switch

11

LOOK AT PANEL 1

Electricity from the starter motor switch goes to the starter motor.

Besides the wire from the battery and the wire to the starter motor, wires also go from the starter motor switch to the _____ and the _____ .

Suggested Projects

The instructor is urged to search for ideas in the suggested references and project books. As the ability of the student increases, more challenging projects or other activities should be suggested. Criteria to be considered include:

1. Contributes to the attainment of course objectives
2. Involves appropriate processes and operations
3. Within ability of student
4. Good design
5. Within means of student
6. Within shop facilities

MACHINE METAL WORKING

Purpose

Machine shop is an important part of the total industrial arts program since machines through the ages have greatly increased the productive capacity of man. Although most industrial arts shops concerned with metals are equiped to work only in such activities as bench work, drilling and metal turning, consideration should also be given to the other important metalworking operations - shaping, milling and grinding. This unit may be used for any other or all of the activities listed and is considered an addition or extension of the unit on bench metalwork.

Specific Objectives

A. To develop an understanding of an an appreciation for metal machining processes and practices.

B. To develop in each student a degree of skill in the use and care of machine shop tools and equipment.

C. To develop an understanding of the metallurgical factors involved in the machine shop area.

D. To provide the opportunity for exploration into various aspects of the metal machining industry.

E. To develop an understanding of an appreciation for precision measurement demanded in the machining of metals and an appreciation of the machine tool industry in the industrial trades.

Suggested Content

A. Manipulative and Technical

1. Identification of tools and machines
2. Planning a project
3. Identification and characteristics of relevant metals
4. Glossary of machine ship terms
5. Layout of stock
6. Operating precision measuring instruments
7. Operating the drill press
8. Sharpening drills and cutting tools
9. Boring and reaming
10. Making set-ups on the lathe
11. Rough and finish turning on the lathe
12. Face-off, bore, knurl, thread, taper and cut-off operations on the lathe.
13. Filing and using abrasives on the lathe.

11

NAME the part that is in BOTH the primary circuit and the secondary circuit:

_____

B. Equipment

1. Metal lathes
2. Metal lathe accessories
   a. Taper attachment
   b. Spindle sleeves
   c. Collect attachment
   d. Universal and independent chucks
   e. Lathe dogs
   f. Drill chuck, Jacobs
   g. Drill pad
   h. Crotch center
   i. Boring bar and holder
   j. Hand reamer set
   k. Knurling tools
   l. Follower rest
   m. Steady rest
   n. Mandrel set
   o. Tool holders
   p. Face plates
   q. Tool post grinder
3. Surface plate
4. Drill press
5. Drill press vise
6. Shaper with accessories
7. Milling machine, vertical and/or horizontal, with accessories
8. Surface grinder with chuck
9. Hold down clamps
10. Metal-cutting power saw
11. Grinder, bench or pedestal

Safety Precautions

A. Place all heavy objects, such as angle plates, surface plates and workpieces so they cannot drop off the bench and injure the worker.

B. Use a brush to clean metal filings from the vise or the work.

C. Leaving a chuck key in the chuck may cause an accident.

D. Wear eye protection in the machine shop.

E. Measuring work in a machine while it is moving is dangerous.

F. Care should be used to keep a lathe carriage from going into the head stock.

G. All work must be clamped tightly in a machine.

G. Use proper cutting speeds for all machines in the machine shop.

J. Keep hands away from all moving cutters.

K. Sleeves should always be rolled up in a machine shop.

L. It is dangerous to sue improperly fitted cutters.

M. It is dangerous to use rags, cotton waste, or cleaning brushes near a moving cutter.

N. Heavy attachments must not be handled alone.

O. Make sure the cutting tool is clear of the work before starting a machine.

P. Avoid grasping metal that may be hot.

Q. Use caution when removing chips from machines.

Materials

Material needed in the machine shop unit will depend upon the choice of projects. Some of these generally on inventory in a machine shop are:

A. Hot rolled carbon steel

B. Cold rolled carbon steel

C. Tool steel

D. Aluminum stock

E. Brass and bronze

F. Lubricants

G. Abrasive paper and cloth

H. Case hardening material

NATIONAL BUREAU OF STANDARDS-1963-A

B. Related information

1. Manufacturing of welding oxygen and acetylene gas
2. Occupational information
3. Consumer information
4. Welding in industry

Suggested Tools and Equipment

A. Hand Tools

1. T-handle wrench
2. Regulator wrench
3. Tip cleaner
4. Ball pein hammers
5. Vise-grip pliers
6. Wire brushes

B. Equipment

1. Welding cart
2. Regulators
3. Welding goggles
4. Friction lighters
5. Leather gloves
6. Welding clamps
7. Anvil
8. Machine vise
9. Grinder
10. Bench shears
11. Wire wheel
12. Safety eyeshield
13. Welding first aid kit
14. Welding hoses and connections
15. Cutting attachment with tips
16. Welding blowpipe and tips
17. Welding tables with fire bricks
18. Fire blanket and extinguisher

Safety Precautions

A. Exercise extreme care when handling cylinders and store in proper place.
B. Using lubricating oil on welding equipment is very dangerous.
C. Acetylene pressure greater than 15 lbs. in hose is very dangerous.
D. Guard against leaks in acetylene equipment
e. check all connections to see if they are tight.
F. Always make sure the torch is pointing away from other or materials that will burn.
G. Wear colored eye protection when welding or cutting.
H. Always use regulation gloves when welding or cutting.
I. Loose clothing and cuffs are vey dangerous around the welding area.
J. Inflammable material should not be in the welding area.
K. Open acetylene pressure valve only one-half turn when using.
L. Keeping acetylene wrench on valve stem when operating welder.
M. Welding on containers which have held combustible or inflammable materials is dangerous.
N. Weld in areas with adequate ventilation.
O. Consider all metals in the welding area as being potentially hot.
P. Keep cap on tanks when moving.
Q. Keep hose away from sparks.
R. Cylinders should always be fastened securely.
S. Turn cylinder valves off at bottle source.

50

NO ANSWER NEEDED

51

The primary circuit includes the starter circuit and the generator circuit.

The job of the generator circuit is to make _____ .

The job of the starter circuit is to _____ .

17469

51

electricity

start the engine running

52

In any electrical circuit, electricity (☐ will ☐ will not) flow if the switch is open.

An open switch is the same as a switch that is:

☐ on

☐ of

When a switch is "on," it means that the switch is:

☐ open

☐ closed

52

will not

off

closed

53

The picture shows the ignition switch in the position that keeps the primary circuit open.

The primary circuit is open when the key is at the:

- ☐ off position
- ☐ on position
- ☐ start position

Electricity (☐ will ☐ will not) flow through the ignition switch to the ignition coil.

17471

53

off position

will not

54

The picture shows the key pointing to the "on" position.

The primary circuit is:

☐ open

☐ closed

Electricity (☐ will ☐ will not) flow through the ignition switch to the ignition coil.

54

closed

will

55

When the key is turned to the start position, the starter motor starts the engine running.

You turn the key to the "start" position when you want to:

- ☐ get the engine running
- ☐ keep the engine running
- ☐ stop the engine from running

55

get the engine running

56

Once the engine starts running, the key stays on the:

- ☐ off position
- ☐ on position
- ☐ start position

To stop the engine from running, you turn the key to the:

- ☐ off position
- ☐ on position
- ☐ start position

56

on position

off position

57

The key is on the "on" position only when:

- ☐ you are starting the engine
- ☐ you are turning off the engine
- ☐ the engine is running

57

the engine is running

58

MATCH the following key positions to the way each affects the primary circuit:

A. key on

B. key off

1. _____ circuit open

2. _____ circuit closed

58

1. A

2. B

59

MATCH the following:

ENGINE	KEY POSITION
A. engine running	1. _____ start
B. engine not running	2. _____ off
C. engine starting	3. _____ on

59

1. C

2. B

3. A

60

PICK UP THE PANEL BOOK

THEN TURN THIS PAGE AND GO ON

Materials

A. Mild steel welding rod
B. Brazing rod
C. Cast iron rod
D. Brazing flux
E. Cast iron flux
F. Flints for lighters
G. Welding metals

Suggested Projects

The instructor is urged to search for ideas in the suggested references and project books. As the ability of the pupil increases, more challenging projects or other activities should be suggested. Criterial to be considered include:

1. Contributes to the attainment of course objectives
2. Involves appropriate processes and operations
3. Within ability of student
4. Good design
5. Within means of student
6. Within shop facilities

ARC WELDING

Purpose

Welding is now used as a major means of fabrication and repair. Arc welding and oxyacetylene welding are two of the most common types of welding now being used. Arc welding is generally more economical than oxyacetylene welding when it is available and it has wider application. Many homeowners now own arc welding machines for general maintenance problems and for do-it-yourself projects.

Specific Objectives

A. To develop the ability to identify, understand and appreciate the fabrication of metals in industry through the medium of arc welding.

B. To develop a degree of skill inthe

B. To develop a degree of skill in the operation and care of arc welding equipment.

C. To provide the opportunity to explore the various aspects of the welding industry for future employment possibilities.

D. To develop the ability to maintain machinery and equipment by use of the arc welder.

Suggested Content

A. Manipulative and technical
   1. Theory of arc welding
   2. Types of arc welding machines
   3. Identification, setting-up and care of equipment
   4. Identification and characteristics of metals as applied to welding
   5. Identification, characteristics and care of electrodes
   6. Glossary of welding terms
   7. Planning welding projects
   8. Identification and welding principles of different types of joints and their purposes
   9. Manipulation of electrodes

65

What does the ignition switch do? _____

65

opens and closes the primary circuit

66

LOOK AT PANEL 1

When the key in the ignition switch is turned to the "start" position, the starter motor circuit is closed.

Electricity will then flow to the starter motor _____ .

66

switch

67

The starter motor switch closes the circuit to the:

- ☐ generator
- ☐ ignition coil
- ☐ starter motor

67

starter motor

68

The starter motor switch is in the:

- ☐ ignition circuit
- ☐ generator circuit
- ☐ starter circuit

17486

68

starter circuit

69

The job of the starter motor switch is to close the circuit to the

_____ .

17487

69

starter motor

70

What kind of voltage goes through the starter motor switch?

_____

10. Welding in the various positions
11. Preparing metals for welding
12. Testing and inspecting various welds
13. Controlling and correcting distortion
14. Striking an arc
15. Cutting with the arc welder
16. Operating the carbon arc torch
17. Hard surfacing
18. Metal resurfacing

B. Related information
1. Industrial processes of welding
2. Consumer information pertaining to welding
3. Occupational opportunities in welding
4. Research in welding electrodes

Suggested Tools and Equipment

A. Hand tools
1. Wire Brushes
2. Chipping Hammers
3. Forging Tongs

B. Equipment
1. Arc welding units, AC and/or DC
2. Power lines
3. Electrode holders
4. Ground clamps
5. Arc shields or helmets
6. Gaunlet gloves, leather
7. Metal welding tables
8. Grinder
9. Wire wheel
10. Safety goggles
11. Bench shears
12. Protective clothing
13. Tungston inert gas welding equipment
14. Magnesium inert gas welding equipment

Safety Precautions

A. Wear a welding helmet whenever welding or watching others weld.
B. Avoid skin exposures.
C. Wear eye protection when in the welding shop.
D. Wear gloves for all welding operations.
E. Roll trouser cuffs down.
F. Shut off welding machine before changing polarity.
G. Touching both contact points at the same time is dangerous.
H. Everyting should be considered potentially hot in the welding area.
I. Avoid exposing welding flashes to others.
J. Weld only in a well-ventilated area.
K. Laying electrode holder on the table is a dangerous practice.
L. Wear long sleeves and leqther or rubber apron.
M. Welding directly on concrete is very dangerous.

70

low voltage

71

Can the starter motor start the engine running if the starter motor switch is not working?

- ☐ yes
- ☐ no

For the starter motor to start the engine running, the starter motor switch must:

- ☐ close the starter circuit
- ☐ open the starter circuit

17489

71

no

close the starter circuit

72

When the starter circuit is closed, electricity flows from the starter motor switch to the _____.

72

starter motor

73

LOOK AT PANEL 1

The starter circuit is closed by the:

- ☐ ignition switch
- ☐ strater motor switch
- ☐ voltage regulator

74

LOOK AT PANEL 1

When the starter circuit is closed, the starter motor starts the engine.

On which position is the key in the ignition switch?

- ☐ on
- ☐ off

NAME the part that closes the circuit to the starter motor:

_____

17493

75

starter motor switch

76

What does the starter motor switch do? _____

17494

76

closes the starter circuit

77

The job of the starter motor switch is to close the starter circuit.

When the starter circuit is closed, the starter motor will:

- ☐ start the engine running
- ☐ not start the engine running
- ☐ stay the same as before

77

start the engine running

78

The starter motor, starter motor switch and the ignition switch are part of the _____ circuit.

17496

78

primary

79

The starter motor is used to:

- ☐ charge the battery of an automobile
- ☐ start the engine running
- ☐ stop the engine from running

17497

79

start the engine running

80

The starter circuit is:

- ☐ high voltage
- ☐ low voltage

The starter circuit is part of the:

- ☐ primary circuit
- ☐ secondary circuit

17498

Materials

A. Electrodes

B. Extra lens for welding helmet

C. Welding metals

D. Carbon tips for arc torch

17508

PLASTICS

Purpose

Due to the ever increasing demands of modern living, the plastics industry has grown tremendously. It has a growth rate of 4 to 5 times greater than that of any other single industry. Due to this rapid growth, we can no longer afford to treat plastics as a sub-unit within the crafts area. Instead, we must treat plastics as a separate curriculum area.

Specific Objectives

A. To develop a knowledge of the history of the plastic industry.
B. To instill an appreciation for the increasing importance of the plastic industry.
C. To develop a knowledge of the classifications, types and kinds of plastics
D. To introduce an ability of the various industrial processes, included design and safety procedures.

Suggested Content

A. Introduction to plastics
   1. History of plastics
   2. Types of plastics
      a. Thermo-forming
      b. Thermod-setting

B. Hand operations
   1. Lay out
   2. Cutting and squaring
   3. Internal carving and dies
   4. Finishing and buffing

C. Molding and forming
   1. Thermo-forming
   2. Injection molding
   3. Rotational molding
   4. Extrusion
   5. Compression
   6. Blow molding

D. Bonding
   1. Cements
   2. Plastic welding

E. Color plastics
   1. Cold dip
   2. Hot dip
   3. Carving dies
   4. Paints

F. Casting and Embedding
   1. Simple casting
   2. Fiberglass
   3. Plastical casting

102

makes electricity

103

Electricity is stored and given off by the _____ .

17521

103

battery

104

A dead battery is a bad battery.

A bad battery gives off:

- ☐ lots of electricity
- ☐ no electricity

17522

105

dead battery

high battery

106

A LOW battery gives just a little electricity.

CHECK the low battery:

17524

106

A

107

A low battery can still be used if it is REFILLED with electricity.

Putting electricity into a battery is called CHARGING a battery.

Battery 2 (☐ needs ☐ does not need) to be charged.

Battery 3 (☐ needs ☐ does not need) to be charged.

17525

107

needs

does not need

108

Putting electricity into the battery is called:

- ☐ advancing the battery
- ☐ charging the battery
- ☐ weakening the battery

17526

108

charging the battery

109

The part that makes electricity, also puts the electricity into the battery.

What part is this? _____

17527

109

generator

110

The generator:

- ☐ charges the battery
- ☐ kills off the battery
- ☐ weakens the battery

17528

Suggested Projects

The instructor is urged to search for ideas in the suggested references and project books. As the ability of the pupil increases, more challenging projects or other activities should be suggested. Criteria to be considered include:

1. Contributions to the attainment of course objectives
2. Involves appropriate processes and operations
3. Within ability of student
4. Good design
5. Within means of student
6. Within shop facilities

BASIC ELECTRICITY

Purpose

Electricity, possibly the greatest benefactor of mankind, has always been a mystery to the average person. In this course, the student will become acquainted with the basic laws and circuits involved in the production and consumption of electrical current. Relationship of basic electricity to the expanding electronics industry in considerable. Although intended to cover a period of 18 weeks, the content may be adjusted to meet the needs of a short unit in a comprehensive general shop.

Specific Objectives

A. To develop an understanding of how electricity affects our social and economic life.

B. To develop a degree of skill in the use and care of tools and equipment used in the electricity area.

C. To develop desirable attitudes and practices with respect to health and safety when working around electricity.

D. To develop the ability to detect minor troubles in electrical circuits in the home and to take safe measures to correct them.

E. To develop the ability to judge the value of electrical products, appliances, and installations.

F. To develop wholesome leisure-time interests and an awareness of occupational opportunities in field of work related to electricity and electronics.

Suggested Content

A. Manipulative and technical

1. Identification of tools and instruments
2. Correct use and care of tools and instruments
3. Electrical symbols
4. Sources of electricity
5. Drawing and reading schematics
6. Magnetism
7. Electromagnetism
8. Electron theory
9. Static electricity
10. Current electricity
11. The simple cell
12. The dry cell
13. The storage cell
14. The generator, alternator, and motor
15. Parallel circuits
16. Series circuits
17. Conductors and insulators
18. Fuses and breakers
19. Transformer function
20. OHM'S Law
21. Series and parallel resistors
22. Communicating with electricity
23. National and local electrical codes
24. Computing cost of electrical service
25. Single and three phase electricity

110

charges the battery

111

Which part charges the battery? _____

17529

111

generator

112

What does a generator do to the battery? _____

17530

112

charges the battery

113

A high battery is fully charged.

A charged battery has enough electricity for the starter motor to start the engine running.

Does the generator really have to charge a fully charged battery?

- ☐ yes
- ☐ no

113

no

114

When a battery is low, it must be _____ .

Which part does this job? _____

17532

114

charged

generator

115

What kind of voltage does the generator make? _____

17533

115

low voltage

116

Some cars have a part that does the same job as the generator.

It is called the ALTERNATOR.

The alternator:

- ☐ makes electricity
- ☐ stores electricity
- ☐ uses electricity

17534

116

makes electricity

117

CHECK the parts below that make electricity:

- ☐ alternator
- ☐ battery
- ☐ generator
- ☐ starter motor

17535

117

alternator

generator

118

The diagrams show two parts that make electricity in a car.

One part is called a generator and the other part is called an _____ .

17536

118

alternator

119

Both the alternator and the generator make the same kind of electricity that the battery gives off.

Alternators produce:

- ☐ high voltage
- ☐ low voltage

17537

119

low voltage

120

In some cars electricity is made by a generator.

In others electricity is made by:

- ☐ an alternator
- ☐ the battery
- ☐ the turbine

17538

1. Occupations and requirements in the electrical and electronics field
2. Applications of electricity in the home and industry
3. The manufacture of electrical supplies and appliances
4. History of artificial illumination
5. Communications and the space age
6. Factors affecting rates of electrical service
7. Opportunities in the Armed Services

Suggested Tools and Equipment

A. Tools

In addition to the tools normally available in a general shop, the following are required:

1. Needle-nose pliers
2. Lineman's pliers
3. Basic meter assortment
4. Watt-hour meter
5. Transformers
6. Circuit testers
7. Relays
8. Magnets
9. Hydrometer
10. Direct current power supply
11. Compasses
12. Battery charger
13. Storage battery
14. Dry cells
15. Switches
16. Surface mount light fixtures
17. Small AC and DC motors
18. Resistor and capacitor assortment
19. Receptacles
20. Glass and hard rubber rod
21. Buzzers and bells
22. Switchboard
23. Rectifier

Materials

A. Wire, various sizes and types
B. Screws and nuts
C. Battery clips
D. Alligator clips
E. Solder, rosin core
F. Solderless connections
G. Staples
H. Electrician's tape
I. Bulbs, assorted
J. Fuses, assorted
K. Wool cloth
M. Fahnestock clips

Safety Precautions

Electricity is a potentially lethal force and must, therefore, be treated with the utmost respect. All high voltage terminals should either be thoroughly insulated or difficult in access. Students should be thoroughly grounded in safety practices, and they should be restricted to experiments involving less than 50 volts until they show by their actions that they have developed a respectful attitude toward electricity. The following precautions are peculiar to this activity and must be observed in the shop and at home.

A. Portable heating appliances must be disconnected before leaving them.
B. Observe first aid procedures when handling victims of electrical shock.
C. Determine the cause of a blown fuse or open circuit breaker before replacing the fuse or resetting breaker.
D. Be aware of conditions that cause electrical accidents.
E. Observe safety rules when testing circuits. When working on a circuit, turn the power off.

an alternator

121

An alternator makes _____ .

17539

258

121

electricity

122

Do you think the serviceman's answer could be correct?

- ☐ yes
- ☐ no

17540

122

yes

123

When the battery is low, it:

- ☐ must be charged
- ☐ need not be charged

17541

123

must be charged

124

Which battery should be charged?

- ☐ a dead battery
- ☐ a high battery
- ☐ a low battery

17542

124

a low battery

125

When the engine turns the fan belt, the fan belt turns the generator.

When the engine runs slowly, the fan belt slowly turns the

_____ .

17543

125

generator

126

The engine turns the fan belt.

The fan belt turns the:

- ☐ battery
- ☐ generator
- ☐ voltage regulator

126

generator

127

A B

The generator shown in picture A produces more electricity than the generator in picture B.

Which generator makes more electricity?

- ☐ a fast generator
- ☐ a slow generator

17545

127

a fast generator

128

When the generator turns fast, it produces a:

- ☐ strong electric current
- ☐ weak electric current

128

strong electric current

129

Is the serviceman giving the customer correct information?

- ☐ yes
- ☐ no

17547

Suggested Projects

The instructor is urged to search for ideas in the suggested references and project books. As the ability of the student increases, more challenging projects or other activities should be suggested. Criteria to be considered include:

1. Contributes to the attainment of course objectives
2. Involves appropriate processes and operations
3. Within ability of student
4. Good design
5. Within means of student
6. Within shop facilities

POWER MECHANICS AND TRANSPORTATION

Purpose

This course in power mechanics involves an exploration of engines which convert fuel or heat into useful power. Experiences are divided between laboratory-type and live jobs. Although planned as an industrial arts course for general education purposes, it also serves as a prevocational experience for boys seeking a vocational interest. The suggested material should be considered the minimum outline for a school year of 36 weeks. Shorter courses may be organized by selecting a limited number of learning units from this content.

Specific Objectives

A. To develop a degree of skill in the use and care of common and special hand tools, instruments, and equipment used in the power laboratory.

B. To explore the construction and operating principles of all power engines, including steam, rocket, jet, diesel and gas.

C. To explore and develop a degree of skill in the diagnosis, maintenance, repair, and rebuilding of units, with emphasis of small gas engines.

D. To make the student aware of the important contributions power has made in the development of our country.

E. To develop an appreciation of the contributions of allied industries.

Suggested Content

A. Manipulative and technical

1. Identification of common tools
2. Correct use and care of precision instruments
3. Correct use and care of tools
4. Identification of engine components
5. Basic operating principles
6. Various power applications
7. Characteristics and functions of:
   a. Heat engines
   b. Fuel systems
   c. Intake system
   d. Exhaust system
   e. Lubrication system
   f. Cooling system
   g. Ignition system
   h. Electrical system
8. Techniques of identifying engine malfunction
9. Making job estimates
10. Planning orderly work procedures
11. Correcting engine malfunctions
12. Selecting replacement parts
13. Causes of lubricating oil contamination
14. Types and purposes of thrust and anti-friction
15. Electron theory or electrical current flow
16. Various starting systems
17. Testing compression

129

yes

130

A car is run at high speed for long distances.

This means the battery will probably be:

- ☐ high
- ☐ low

17548

130

high

131

LOOK AT PANEL 1

Wires go from the generator to the _____ .

17549

131

voltage regulator

132

LOOK AT PANEL 1

What connects the voltage regulator to the generator?

_____

17550

132

(2) wires

133

If the battery is fully charged, it:

- ☐ does not need the electricity made by the generator
- ☐ needs the electricity made by the generator

17551

133

does not need the electricity made by the generator

134

The voltage regulator has points inside of it.

The points act just like a switch.

When the points touch each other, the circuit is closed and electricity:

- ☐ will flow through the voltage regulator
- ☐ will not flow through the voltage regulator

17552

134

will flow through the voltage regulator

135

open contact point

closed contact point

A contact point works like a switch inside the voltage regulator.

When the contact point is open, the electricity (☐ will ☐ will not) pass through the contact point.

17553

135

will not (pass)

136

closed contact point

The electricity (☐ will pass ☐ will not pass) through the contact point shown above.

17554

136

will pass

137

Electricity from the generator goes through the voltage regulator when the regulator's contact points are:

- ☐ open
- ☐ closed

17555

137

closed

138

Battery	Voltage Regulator
low	closes
high	opens

When the battery is high, the voltage regulator automatically _____ .

17556

138

opens

139

When the battery is low, the voltage regulator:

- ☐ opens
- ☐ closes

and the electricity:

- ☐ flows to the battery
- ☐ does not flow to the battery

17557

10. Oil stone
11. Oil measure
12. Oil can opener-dispenser
13. Oil suction gun

139

closes

flows to the battery

140

The voltage regulator closes when the battery is:

- ☐ high
- ☐ low

The battery will then:

- ☐ be charged by the generator
- ☐ be discharged by the generator
- ☐ go dead

17558

140

low

get charged by the generator

141

Is the serviceman's answer correct?

- ☐ yes
- ☐ no

17559

141

yes

142

A voltage regulator:

- ☐ charges the generator
- ☐ stops and starts the flow of electricity from the generator to the battery

17560

142

stops and starts the flow of electricity from the generator to the battery

143

The flow of electricity from the generator to the battery is regulated by the _____ _____ .

17561

143

voltage regulator

144

What does the voltage regulator do to the flow of electricity?

- ☐ nothing
- ☐ regulates it

17562

144

regulates it

145

To keep the battery at the proper charge, the voltage regulator controls the flow of _____ .

145

electricity

146

A voltage regulator is used to control the _____ of _____ .

17564

146

flow

electricity

147

Electricity going through the voltage regulator is:

- ☐ high voltage
- ☐ low voltage

The generator, voltage regulator and the battery are part of the _____ circuit.

147

low voltage

A battery that has lots of electricity is said to be:

- ☐ a low battery
- ☐ a dead battery
- ☐ fully charged

152

fully charged

153

A battery that is low must be _____ .

The part that does this job is the _____ .

17571

153

charged

generator

154

If a battery is fully charged, it:

- ☐ should be recharged
- ☐ should not be charged

The part that controls the flow of electricity from the generator into the battery is the _____ .

17572

154

should not be charged

voltage regulator

155

NAME the part that makes electricity:

_____

The part that stops the flow of electricity to the battery when the battery is fully charged is the _____ .

17573

155

generator

voltage regulator

156

The part that starts the engine running is the _____ .

156

starter motor

157

The part that closes the circuit to the starter motor is the

_____ .

17575

157

starter motor switch

158

The primary circuit and the secondary circuit come together at the:

- ☐ distributor
- ☐ ignition coil
- ☐ generator

158

ignition coil

159

Electricity coming out of the ignition coil is high voltage.

Electricity going into the ignition coil is _____ voltage.

17577

d. Battery charge, fast charge type
e. Battery hydrometer
f. Battery cell tester
g. Battery carrier strap
h. Battery water dispenser
i. Battery storage rack with rubber or plastic mat

5. Benches
   a. Permanent with vises
   b. Portable
   c. Test equipment
6. Containers
   a. Safety gasoline can
   b. Oil drain pan
   c. Covered waste can
   d. Drain
7. Cleaning equipment
   a. Air blow gun
   b. Air-kerosene spray gun
   c. Air-hot water spray gun
   d. Ring groove cleaner
   e. Parts vat
   f. Carburetor vat
   g. Spark plug cleaner and tester
8. Creepers
9. Drills
   a. Electric portable
   b. Drill press
   c. Twist drill set, high speed
10. Engine lifting equipment
    a. Chair hoist with overhead trolley and monorail
    b. Portable engine life
11. Engine support stands
12. Guages
    a. Cylinder, dial indicator
    b. Compressor
13. Bench grinders
14. Growler, armature
15. Honers
    a. Cylinder
    b. Bushing (piston, etc.)
    c. Brake cylinder hone
16. Jacks
    a. Floor, hydraulic type (3 to 5 ton)
    b. Hand, hydraulic type (2 to 5 ton)
    c. Bumper, hydraulic
17. Meters
    a. Starter load
    b. Volt, (12-20 volt rating)
    c. Ammeter, (40-50 amp capacity)

159

POST-TEST BOOK 4: AUTOMOTIVE ELECTRICAL SYSTEMS
PART I

A BASIC SYSTEMS PROGRAM

17582

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

The low-voltage circuit is separated from the high-voltage circuit by the _____ _____.

Low voltage goes through the (☐ primary ☐ secondary) circuit.

2

Electricity is stored and given off by the _____.

3

When electricity leaves the generator, it first flows through the _____ _____.

4

When the ignition key is turned to the "on" position, electricity (☐ will ☐ will not) reach the ignition coil.

5

If you want to start the engine running, you should turn the ignition key to the _____ position.

6

The part that starts the engine running is the _____ _____ .

7

When the battery is fully charged, the points in the voltage regulator (☐ open ☐ close) and stop the flow of electricity to the battery.

8

The generator and the starter are both in the (☐ primary ☐ secondary) circuit.

9

The starter motor switch closes the circuit to the _____ _____ .

10

When the ignition key is turned to the "off" position, electricity (☐ will ☐ will not) reach the ignition coil.

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on automotive electrical systems, Part II, was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

BOOK 5: AUTOMOTIVE ELECTRICAL SYSTEM

PART II

Developed under the Manpower Development and Training Act of 1962 (PL 87-416), contract No. MDS 24-64 between the Secretary of Labor and Young Men's Christian Association of Greater New York, by Basic Systems Incorporated.

17590

1

Electricity is stored and given off by the _____.

2

NAME the part that is in both the primary circuit and the secondary circuit. _____

3

The part of the ignition system that sparks the gasoline is called the _____.

4

Electricity reaches the ignition coil when the key is turned to the _____ position.

5

The starter circuit is closed by the _____ _____ switch.

6

What kind of voltage do the spark plugs use? _____ _____

7

The part that distributes electricity to the spark plugs is called the _____.

8

NAME the part that makes electricity. _____

9

When the battery is getting more electricity than it is giving out, we say that the battery is being _____.

10

Which parts of the electrical system are screwed into the engine?

_____ _____

Name _____

Date _____

Starting time _____

Finishing time _____

17593

1

Electricity is stored and given off by the _____.

17594

1

battery

2

Parts in the primary circuit:

- ☐ keep the car running
- ☐ make electricity
- ☐ start the engine

17595

2

make electricity

start the engine

3

The starter motor switch closes the circuit to the:

- ☐ generator
- ☐ ignition coil
- ☐ starter motor

What will then happen to the engine? _____

17596

3

starter motor

It will start running.

4

A battery that has little electricity in it must be:

- ☐ charged
- ☐ discharged
- ☐ left alone

HOME MAINTENANCE

Purpose

Fundamentals learned in other areas of industrial arts are easily adapted to home mechanics. The difference is in the emphasis. Home mechanics, as the name implies, emphasizes the solution of problems found in and around the home. It points to the non-vocational nature of industrial arts and accents its place in general education. Segments of this course could be beneficially used for a course in 'industrial Arts for Girls'.

Specific Objectives

A. To develop in boys and girls the interest and ability to solve problems common to home maintenance and repair.

B. To develop the ability to use and care for common household tools.

C. To develop in the student a feeling of pride and responsibility concerning his home and its equipment.

D. To develop a better understanding of the physical environment in the home.

E. To develop the ability to select, purchase, and care for materials used in the home.

F. To develop an appreciation for good habits of health and safety in the home.

Suggested Content

A. Manipulative and Technical

1. Planning
   a. Sketch and reading detailed drawings
   b. Building codes and regulations
   c. Estimating building costs
   d. Kinds of construction
2. Carpentry
   a. Repair windows and doors
   b. Repair and refinish floors
   c. Install caulking, insulation and weather stripping
   d. Roof repairs
3. Electricity
   a. Low voltage bell, buzzers, and thermostats
   b. Repair and replace light switches
   c. Repair and replace extension and appliance cords
   d. Fuses and circuit breakers
   e. Transformers
   f. Maintaining electric motors
   g. Reading a watt-hour meter and computing costs
   h. City and state electrical codes
   i. Replacing heating elements
   j. Series and parallel lighting circuits
4. Plumbing
   a. Plumbing codes and regulations
   b. Repairing faucets, valves and drains
   c. Pipes and fittings
   d. Reading water meters and computing costs
5. Finishing and decorating
   a. Exterior and interior finishes

4

charged

5

NAME the part that charges the battery: _____

17598

5

generator

6

Electricity does not flow into the battery when the battery is fully charged. The part that stops the flow of electricity to the battery is the _____.

17599

6

voltage regulator

7

When the battery is low, the voltage regulator closes and electricity

- ☐ flows into the battery
- ☐ does not flow into the battery
- ☐ stays where it is

7

flows into the battery

8

For electricity to get to the ignition coil, it must first flow through the _____.

This will happen when the key is turned to the

- ☐ on position
- ☐ off position
- ☐ start position

8

ignition switch

on position

9

NAME the part that closes the starter circuit:

_____

When this happens, what will the starter motor do?

_____

9

starter motor switch

It will start the engine running.

10

For the starter motor switch to close the starter circuit, the key in the ignition switch must be turned to the _____ position.

10

start

11

The generator circuit and the starter circuit are both:

- ☐ high voltage
- ☐ low voltage

11

low voltage

12

Low voltage is carried by the primary circuit. High voltage is carried by the _____.

12

secondary circuit

13

What kind of voltage does the generator make?

_____

When electricity goes into the battery, it is _____ voltage.

17606

13

low voltage

low

14

The primary circuit ends at the ignition coil.

Where does this circuit begin? _____

17607

b. Application of finishes
c. Removers, sealers and bleaches
d. Mixing colors
e. Care of brushes and other equipment
f. Cutting and glazing glass
g. Hanging wall paper

6. Masonry
a. Building forms
b. Mixing concrete, mortar, and plaster
c. Laying brick, block and stone
d. Repairing plaster
e. Repairing and replacing tile

B. Related Information
1. Lumber grades and prices
2. Preserving and protecting wood
3. Common fasteners
4. Common abrasives
5. Cost considerations
6. Basic first aid
7. Effects of moisture on materials
8. Manufacture of plywood
9. Manufacture of electrical and plumbing materials
10. General up-keep and neatness of a home

Suggested Tools and Equipment

Lists of necessary tools and equipment for many of the sub-units in home mechanics will be found in the corresponding units in the Guide. Supplementary information will be available in selected references for this unit. The following are lists of suggested tools and equipment for sub-units not included elsewhere in the Guide.

A. Plumbing
1. Pipe vise
2. Peip wrenches, 10", 12", and 14"
3. Adjustable wrenches, 12", 14"
4. Propane torch
5. Screw drivers
6. So;dering coppers
7. Hole saws
8. Pipe cutters, #1, #2
9. Valve seat dressing tool
10. Plumber's friend
11. Tubing cutter
12. Tube flanging tool

B. Masonry
1. Mortar Box
2. Mortar Board
3. Sand Screen
4. Mixing hoe
5. Hod

1758

14

battery

15

The primary circuit is opened and closed by the _____ switch.

starter motor

17

When the ignition switch closes the starter circuit, does electricity reach the starter motor switch?

- ☐ yes
- ☐ no

17610

17

yes

18

PICK UP THE PANEL BOOK

FIND PANEL 1

THEN TURN THIS PAGE AND GO ON

17611

18

NO ANSWER NEEDED

19

LOOK AT PANEL 1

Electricity made by the generator goes through the voltage regulator.

It then flows through the _____.

17612

19

ammeter

20

A battery that is very low will have:

- ☐ much electricity flowing into it
- ☐ little electricity flowing into it
- ☐ no electricity flowing into it

17613

20

much electricity flowing into it

21

LOOK AT PANEL 1

Before electricity flows into the battery, it flows through a meter. This meter is called the _____.

17614

21

ammeter

22

Electricity goes through the ammeter.

Where does it come from?

- ☐ battery
- ☐ voltage regulator

17615

22

voltage regulator

23

When more electricity is flowing out of the battery than is being put into the battery, you say that the battery is:

- ☐ charging
- ☐ discharging
- ☐ resting

17616

6. Brick trowel
7. Plastering trowel
8. Cement finishing trowel
9. Pointed trowel
10. Plumb rule, 48"
11. Brick hammer
12. Jointer tools
13. Terra-cotta chisels
14. Line blocks
15. Line
16. Steel rule
17. Steel square
18. Hawk
19. Tile nipper
20. Tile cutter
21. Rubbing stone
22. Straight edge

Safety Precautions

A. Use machines only after proper instruction.
B. Wear safety goggles or face guard when using cutting or grinding tools.
C. Keep safety devices on machines at all times.
D. Use sharp edged tools properly and with caution.
E. Protect the hands, feet, face, and body when using hot tools or materials.
F. Check all scaffolding before using.
G. Keep shop work area free from scraps and debris.
H. When making electrical repairs be sure to turn off the electrical power.

Materials

As in the case of tools and equipment, materials for many sub-units in home mechanics are included in corresponding units elsewhere in the Guide. Exceptions follow:

A. Plumbing
   1. Pipe and fittings
   2. Copper tubing and fittings
   3. Solder
   4. Flux
   5. Pipe joint compound
   6. Faucet washers and packing
B. Masonry
   1. Brick, concrete blocks, field stone
   2. Cement
   3. Sand and gravel
   4. Lime or prepared mortar mix
   5. Plaster of Paris
   6. Gypsum plaster
   7. Plaster or ceramic tile
   8. Tile mastic
   9. Grout, white

23

discharging

24

When more electricity is flowing <u>into</u> the battery than out of it, you say that the battery is being:

- ☐ charged
- ☐ discharged
- ☐ rested

24

charged

25

AMMETER

The job of the ammeter is to show if electricity is flowing into or out of the battery.

When the battery is discharging, the needle on the ammeter points to the minus (–) side.

When the battery gets charged, the needle will:

- ☐ go to the plus (+) side
- ☐ go to the zero (0) position
- ☐ stay at the minus (–) side

17618

25

go to the plus (+) side

26

AMMETER

Which position is the ammeter needle pointing at?

- ☐ plus (+) side
- ☐ minus (−) side
- ☐ zero (0) position, off

This means that the battery is being:

- ☐ charged
- ☐ discharged

17619

26

plus (+) side

charged

27

Electricity leaving the voltage regulator goes through which meter?

_____

The needle on this meter will point to which side? _____

17620

27

ammeter

plus <u>or</u> +

28

The battery is fully charged and does not need the electricity made by the generator. The points in the voltage regulator open up and electricity:

- ☐ will flow through to the battery
- ☐ will not flow through to the battery

28

will not flow through to the battery

29

NAME the meter that shows the flow of electricity in and out of the battery. _____

29

ammeter

30

A

B

Which ammeter shows the battery being charged? _____

Which ammeter shows the points in the voltage regulator open? _____

Which ammeter shows the battery discharging? _____

17623

30

A

B

B

31

When the battery is getting weaker, the ammeter needle points to the:

- ☐ + side
- ☐ - side
- ☐ 0

When this happens, the battery is:

- ☐ charging
- ☐ discharging

17624

31

- side

discharging

32

A charging battery becomes:

☐ stronger

☐ weaker

Which side will the ammeter needle then point to? _____

17625

32

stronger

plus <u>or</u> +

33

An ammeter shows if a battery is getting stronger or weaker.

A charging battery is getting _____.

A battery that is getting weaker is said to be _____.

Suggested Projects

Working drawings
Bill of materials and cost estimating
Make and fit handles in tools
Repair a window screen
Hand or repair a door
Repair a floor or a roof
Window box
Garden trellis
Wire push button and buzzer in series
Wire push button and buzzer in parallel circuit
Wirt two push buttons and one buzzer
Repair and replace a heating unit
Install a bell transformer
Repair a faucet
Clean a drain trap
Figure a water bill
Set forms and pour concrete
Repair concrete sidewalk or steps
Concrete flags
Repoint a brick or block wall
Brick incinerator
Patch a plastered wall
Replace a loose brick
Plaster a block wall

GRAPHIC ARTS

Graphic arts is a broad term used widely in industry to describe printing and allied crafts. Graphic arts, one of the ten leading industries in theUnited States, is offered in industrial arts programs in a variety of combinations. In this guide the units are confined to three of the most common areas -- bookbinding, letterpress printing, and screen process printing.

General Objectives

To develop an understanding of the contributions made to business, industry, education, and the professions by the grapphic arts field.

To provide an opportunity to develop a background of knowledge and skills leading to the intelligent selection of an avocational interest.

To develop an awareness of the many occupational opportunities in the graphic arts and allied fields.

To develop the ability to recognize and appreciate good typo-graphical design, a well-printed product, and the craftsmanship involved in the producing of the product.

To develop the ability to plan in an intelligent manner and produce work that meets accepted standards.

To become familiar with the related graphic arts process of screen process printing, bookbinding, rubber stamp making, and their application in business and industry.

Purpose

The most common type of printing taught in the public schools today is letterpress or relief printing. The printing is accomplished from a raised surface. The common rubber stamp is a typical example of this type of printing.

Specific Objectives

A. To develop the student's ability to use the technical terms of the printer.
B. To develop the ability to recognize and appreciate good typographical design and a well-printed product.
C. To develop safe work habits
D. To develop the ability to plan, to design, and to follow copy.

Suggested Content

A. Manipulative and Technical
   1. Lay of the type cases
   2. Layout and design of jobs
   3. Setting type
   4. Proofreaders' marks
   5. Use of spacing material
   6. Typing forms
   7. Proofing and correcting a form
   8. Distributing type and spacing material
   9. Setting various types of indentions
   10. Inposing and locking up a form
   11. Press maintenance

43

make electricity

start the engine running

44

The primary circuit ends at the:

- ☐ distributor
- ☐ ignition coil
- ☐ starter motor

44

ignition coil

45

LOOK AT PANEL 1

Which circuit begins at the ignition coil? _____

17638

45

secondary circuit

46

Parts in the secondary circuit keep the engine running.

To keep the engine running, _____ voltage is needed.

17639

46

high

47

The primary circuit ends and the secondary circuit begins at the

_____.

17640

47

ignition coil

48

Low voltage goes into the ignition coil and _____ voltage comes out of it.

17641

48

high

49

By going through the ignition coil, voltage is:

- ☐ made larger
- ☐ made smaller
- ☐ kept the same

17642

49

made larger

50

Which part of the automobile's electrical system makes voltage higher? _____

17643

50

ignition coil

51

The ignition coil changes _____ voltage to _____ voltage.

51

low

high

52

The engine needs high voltage to keep running. This is made by the _____.

17645

52

ignition coil

53

Which switch closes the circuit to the ignition coil?

_____

In what position will it be?

- ☐ off
- ☐ on
- ☐ neither

12. Inking, making ready, feeding and cleaning presses
13. Cutting paper
14. Thermographic printing
15. Design of type faces
16. Balance and symmetry
17. Basic sizes and weights of paper
18. Processes of line casting machines
19. Comparison of various printing processes
20. Designing and making rubber stamps
21. Wage scales of various operations in a printing shop
22. Processes of stereotyping, mat-making, and other forms of plate making.

B. Related Information

1. Occupations and requirements in the graphic arts industry
2. Employment opportunities
3. Labor unions in the graphic arts industry
4. Selection of equipment
5. History of paper, ink, printing, presses, etc.
6. Multicolor printing
7. The printing of newspapers and periodicals.

Suggested Tools and Equipment

A. Line gauges
B. Composing sticks
C. Benzine cans
D. Galleys
E. Quoins
F. Quoin key
G. Assorted cases (type, rule, space)
H. Rawhide mallet
I. Type and proof planners
J. Proof press brayer
K. Font of wooden furniture
L. Font of reglets
M. Font of brass rule
N. Fonts of leaders
O. Platen presses of various sizes (complete)
P. Imposing stone with galley and furniture storage
Q. Proof press
R. Assorted wrenches, screw drivers and other hand tools
S. Type high gauge
T. Thermography equipment
U. Type cabinets
V. Lead and slug rack
W. Vulcanizing press

1762

53

ignition switch

on

54

Will electricity reach the ignition coil if the ignition switch is off?

- ☐ yes
- ☐ no

What kind of voltage flows through the ignition switch? _____

17647

54

no

low voltage

55

What does the ignition coil do? _____

17648

55

It changes low voltage to high voltage.

56

LOOK AT PANEL 1

When high voltage comes out of the coil, it first reaches the:

- ☐ distributor
- ☐ spark plugs

57

high voltage

58

LOOK AT PANEL 1

The distributor sends the high voltage to the six _____ _____.

58

spark plugs

59

LOOK AT PANEL 1

The distributor gets the high-voltage electricity from the

_____.

17652

59

ignition coil

60

For high voltage to get to the spark plugs from the ignition coil, it must go through the _____.

17653

60

distributor

61

The distributor: (CHECK TWO)

- ☐ gets electricity from the ignition coil
- ☐ makes high-voltage electricity
- ☐ sends electricity to the spark plugs
- ☐ sends electricity to the ignition switch

61

gets electricity from the ignition coil

sends electricity to the spark plugs

62

LOOK AT PANEL 1

How many wires go from the ignition coil to the distributor?

_____

How many wires go from the distributor to the spark plugs?

_____

17655

62

2

6

63

LOOK AT PANEL 1

To "distribute" means to split up and give something.

What does the distributor distribute? _____

What does it distribute it to? _____

17656

Safety Precautions

A. Avoid distractions when operating the press.

B. Keep both hands on the lever when operating the paper cutter.

C. Check grippers for clearance before turning on press.

D. Be aware of and know the dangers of working with volatile liquids.

E. Store soiled rags in a closed metal can.

F. The vulcanizing press is hot--exercise care when removing stamps.

Materials

a. gauge pins

B. Assorted sizes and styles of foundry type

C. Assorted sizes of spaces and quads

D. Various sizes, colors and weights of paper

E. Assorted colors of inks

F. Varnishes, reducers, etc., for inks

G. Chip board

H. Padding compound

I. Thermographic powder

K. Tympan paper

L. Sealing wax

M. String

N. Makeready paste

O. Type cleaner

P. Rubber stamp kits

Q. Ink pads and suitable ink

Suggested Projects

The instructor is urged to search for ideas in the suggested references and project books. As the ability of the pupil increases, more challenging projects or other activities should be suggested. Criteria to be considered include:

1. Contributions to the attainment of course objectives
2. Involves appropriate processes and operations
3. Within ability of student
4. Good design
5. Within means of student
6. Within shop facilities

SCREEN PROCESS PRINTING

Purpose

Screen process printing is a fast growing, versatile phase of the graphic arts field. An introduction to this stencil technique of printing can be accomplished with inexpensive equipment.

Specific Objectives

A. To develop an awareness of the importance of screen process printing in industry.

B. To provide an opportunity for the students to work with the media that is incorporated into screen process printing.

C. To develop an appreciation of good design in screen process printing.

63

electricity or high voltage

spark plugs

64

The job of the distributor is to _____ high _____ electricity to the spark plugs.

17657

64

distribute <u>or</u> split up

voltage

66

distributor

ignition coil

67

What does the distributor do? _____

17660

67

It gives high-voltage electricity to the spark plugs.

68

The primary circuit starts the car and makes electricity. The engine needs the electricity of the secondary circuit to keep running.

What kind of voltage keeps the engine running? _____

17661

68

high voltage

69

LOOK AT PANEL 1

The parts that have threads on them are screwed into the engine.

Which parts have threads? _____

17662

69

spark plugs

70

The last parts of the secondary circuit are the _____.

17663

70

spark plugs

71

Just as a person uses "muscle" to get a job done, an automobile uses gasoline to keep the engine running.

A person burns up food when he uses energy.

An automobile engine burns up gasoline when it is running.

NO ANSWER NEEDED

GO ON TO NEXT PAGE

71

NO ANSWER NEEDED

72

What kind of fuel does an automobile engine use?

_____

17665

72

gasoline

73

Gasoline must be burned in an automobile engine in order to keep the engine running.

You can light gasoline with a match or a spark.

Can you guess what part of the electrical system sparks the gasoline in an automobile engine? _____

17666

Suggested Content

   1. Circle cutter
   2. Swivel cutter
   3. Bi-line cutter
   4. Film line cutter
   5. Straight stencil knife
B. Frames of various sizes
C. Rubber squeeges of various sizes
D. Stapler
E. Spatulas
F. India slipstone

73

spark plug

74

Spark plugs light the gasoline in the:

- ☐ engine
- ☐ ignition system
- ☐ primary circuit

This will keep the engine:

- ☐ from running
- ☐ running
- ☐ still

17667

74

engine

running

75

Spark plugs help keep the engine running by:

- ☐ giving it energy
- ☐ lighting the gasoline
- ☐ working it

17668

75

lighting the gasoline

76

If high voltage did NOT reach the spark plugs, there would be no spark.

In this event, which of the following are correct?

- ☐ then the engine could not run
- ☐ then the engine could not stop running

17669

76

then the engine could not run

77

When the spark plug makes a spark, the gasoline:

- ☐ will burn
- ☐ will not burn

17670

77

will burn

78

Gasoline in the engine will burn when it gets a:

- ☐ flame
- ☐ match
- ☐ spark

NAME the part that gives it. _____

17671

78

spark

spark plugs

79

The spark plugs give:

- ☐ a spark to burn gasoline
- ☐ electric current to the engine
- ☐ low voltage to the distributor

79

a spark to burn gasoline

80

Sparks from the spark plugs burn _____ in the engine.

17673

80

gasoline

81

Why are sparks from the spark plugs needed by the engine?

_____

17674

81

to burn gasoline

82

What do spark plugs do? _____

17675

82

They make a spark to burn gasoline.

83

Where do the spark plugs get electricity from? _____

What kind of voltage is this? _____

17676

ignition coil

spark plugs

106

CHECK the parts that are in the primary circuit:

- ☐ battery
- ☐ distributor
- ☐ generator
- ☐ ignition switch
- ☐ spark plugs
- ☐ starter motor switch

106

battery

generator

ignition switch

starter motor switch

107

The part that changes low voltage to high voltage is the _____.

17700

107

ignition coil

108

CHECK the parts that are in the primary circuit:

- ☐ ammeter
- ☐ distributor
- ☐ starter motor
- ☐ voltage regulator

17701

108

ammeter

starter motor

voltage regulator

109

CHECK the jobs done in the primary circuit:

- ☐ keep the engine running
- ☐ make electricity
- ☐ start the engine

17702

109

make electricity

start the engine

110

CHECK the job done by the secondary circuit:

- ☐ keep the engine running
- ☐ make electricity
- ☐ start the engine running

17703

110

keep the engine running

111

You have just completed BOOK 4 and BOOK 5.

These books taught you about the electrical circuits that:

- ☐ keep the engine running
- ☐ make electricity
- ☐ start the engine running

111

keep the engine running

make electricity

start the engine running

112

THIS IS THE END OF BOOK 5

17705

CRAFTS

Through the crafts area the student is introduced to several areas of industry. Knowledge and skills developed in working with crafts are transferable to other areas of industrial arts. Through these experiences the student will be a much better informer-consumer of the many products by industry that are a part of his daily life.

Ceramics, leather, art metals and wood carving are the areas included under the general heading of CRAFTS. Each could be offered separately, but a more desirable arrangement is to offer a general course permitting students to explore several of the areas.

General Objectives

To develop an appreciation of good design and craftsmanship in the crafts.

To create an avocational interest for leisure-time activities.

To give the student a general knowledge of the crafts products from a consumer's standpoint.

To acquaint the student with present day industrial methods.

To develop a degree of skill in working with tools, materials, and equipment used in crafts.

To develop a desire for creativity within the student.

CERAMICS

Purpose

Ceramics provides an ideal situation for experimentation and creative thinking at a small cost to the student. With little equipment and a creative mind, much can be accomplished in the way of originality of design.

Specific Objectives

A. To develop an avocational interest in the ceramics area
B. To develop an awareness of the materials and processes in the ceramics field
C. To develop an appreciation of good design, creative, and commercial in ceramics
D. To develop a degree of skill in the procedures and processes used in the ceramics area.

Suggested Content

A. Manipulative and Technical
   1. Terminology
   2. Working with clay
   3. Basic designs in ceramics
   4. Formulas for mixing clay bodies and glazes
   5. Making and using the plastic mold
   6. The potter's wheel and its techniques
   7. Creativity
   8. Operating the ceramic kiln
      a. Bisque
      b. Glaze ware
   9. Mixing, wedging, and preparing clay
   10. Jiggering

1768

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

Which part changes low voltage electricity to high voltage electricity?

_____ _____

2

What kind of voltage does the distributor get? _____ _____

3

The flow of electricity is shown on the _____.

4

Gasoline is exploded in the engine by _____ _____.

5

A battery that is low in electricity is said to be _____.

17707

6

The part that distributes electricity to the spark plugs is called the _____.

7

The starter motor circuit is closed by the _____ _____ switch.

8

What kind of voltage do the spark plugs use to explode the gasoline?

_____ _____

9

What part makes high voltage out of low voltage electricity?

_____ _____

10

The flow of electricity into the battery is regulated by the _____ _____.

IDENTIFIERS - *MANPOWER DEVELOPMENT AND TRAINING ACT PROGRAMS; MDTA PROGRAMS

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on automotive electrical systems, Part III, was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

1

To turn on the low beam, how far out should you pull the headlight switch? _____

2

When parked at night at the side of the road, you should have your _____ lights turned on.

3

To change your low beam to the high beam, step on the _____ switch.

4

Cars behind you know that you are stopping your car when they see your _____ lights go on.

5

When you step on the brake pedal, which lights will go on? _____

17714

Name _____

Date _____

Starting time _____

Finishing time _____

17716

11. Dry press forming
12. Turning
13. Decorating ceramic pieces
    a. Colored slip
    b. Underglaze
    c. Overglaze
    d. Decals
    e. Raised and carved designs
14. Applying glazes
15. Making and using the one-and two-piece plaster molds
16. Using student-made and commercial molds

B. Related Information
1. Local clay deposits
2. Commercial uses of clay
3. History of the ceramics industry
4. Types of commonly used clays and their uses
5. Methods used in the ceramics industry
6. The glass industry
7. The portland cement industries

Suggested Tools and Equipment

A. Ceramic Kiln
B. Potters wheel
C. Metal containers for storing dry clay
D. Rust proof containers for storing wet clay
E. Containers for slip casting clay
F. Spray booth and stilts
G. Kiln shelves, supports and stilts
H. Purometric cones
I. Modeling wheels
J. Wedging board
K. Plaster bats
L. Plaster molds, mostly one piece
M. Scales
N. Sieves
O. Tables with waterproof tops
P. Sink facilities with hot/cold water and dirt trap
Q. Face masks
R. Steel and wooden modeling tools
S. Palette knives
T. Turning tools for potter's wheel
U. Small sponges
V. Wooden rollers for rolling clay
W. Wire and brush tools
X. Brushes
Y. Flexible scrapers
Z. Grindstones

Materials

A. Local clays, when possible
B. Modeling clay
D. Molding plaster
E. Matt and gloss glaze
F. Underglaze colors
G. Overglaze colors
H. Ceramic pencils
I. Decal pages
J. Stencils
k. kiln wash
L. Sandpaper and steel wool

1769

1

BOOK 4 and BOOK 5 taught you about the electrical system of an automobile.

CHECK the parts that were not taught in these books:

- ☐ ammeter
- ☐ fuses
- ☐ heater
- ☐ generator
- ☐ lights
- ☐ starter motor
- ☐ windshield wipers

1

fuses

heater

lights

windshield wipers

2

This book will teach you about the "extras" that use electricity in an automobile.

The automobile extras that you will learn about get electric power from the _____ .

17718

2

battery

3

Headlights are on the:

- ☐ back of the car
- ☐ front of the car

and tail lights are on the:

- ☐ back of the car
- ☐ front of the car

17719

3

front of the car

back of the car

4

To help you see while driving at night:

- ☐ headlights are used
- ☐ taillights are used

To help the cars in back of you to see your car:

- ☐ headlights are used
- ☐ taillights are used

17720

4

headlights are used

taillights are used

5

You use taillights and headlights while driving:

- ☐ at night
- ☐ during the day

17721

5

at night

6

To see what is in front of you while driving at night, you use the car's _____ .

When you drive at night, the drivers behind you can see your car if you turn on the _____ .

17722

6

headlights

taillights

7

High Beam

Low Beam

Parking Light

The shaded lights can be used at night.

The parking lights should not be used while driving.

NAME the two beams that can be used at night:

_____

_____

7

high beam

low beam

8

High Beam Low Beam Parking Light

The parking lights should not be used while driving.

You CAN use parking lights when:

- ☐ the car is parked on the side of the road
- ☐ you are moving on the highway
- ☐ you are going through city streets

17724

8

the car is parked on the side of the road

9

You use the low beam when driving in the city and you use the _____ when you are driving on the highway.

17725

9

high

10

If you are driving on the Thruway, which beam you should you use? _____

If you pull the car off the road to one side, change the lights to your _____ lights.

17726

Safety Precautions

A. Be aware of the extreme heat in the kiln

B. Do not open kiln unless authorized to do so

c. Beware of sharp ceramic edges

D. Use grindstone to smooth sharp edges

E. Guard against lead poison when spraying glaze

Suggested Projects

The instructor is urged to search for ideas in the suggested references and project books. As the ability of the pupil increases, more challenging projects or other activities should be suggested. Criterial to be considered include:

1. Contributes to the attainment of course objectives
2. Involves appropriate processes and operations
3. Within ability of student
4. Good design
5. Within means of student
6. Within shop facilities

LEATHERCRAFT

Purpose

Leathercraft is taught as a leisure time activity. The main purposes being: the development of a worthwhile hobby, to develop a measure of manipulative skill, and to learn and care for leather products.

Specific Objectives

A. To create an interest in leather.

B. To develop an appreciation of good design in leather.

C. To develop an awareness of the importance of leather and its uses.

D. To develop a working knowledge of the processes used in leathercraft.

Suggested Content

A. Manipulative and Technical

1. Terminology
2. Decorating leather
3. Creative possibilities
4. Lacing and stitiching
5. Operating machines used in leatherwork
6. Transferring designs
7. Marking leather for tooling
8. Preparing leather for tooling
9. Tooling outlines with modeling tools
10. Stamp designs
11. Raised designs
12. Creasing edges
13. Splice lacing
14. Punch lacing holes
15. Attaching hardware
16. Types of lacing
17. Carved leather designs
18. Assembly processes
19. Dyeing and applying finish

1771 1770

10

high

parking

11

Low beams are used in the _____ .

High beam lights are used on the _____ .

17727

11

city

highway

12

Which lights should you use when you are parked at the side of the road? _____

When you pull back onto the highway, change your lights to the _____ _____ beam.

17728

12

parking lights

high

13

MATCH the following:

A. high beam

B. low beam

C. parking lights

1. _____ driving on city streets

2. _____ driving on highways

3. _____ standing on the side of the road

17729

13

1. B

2. A

3. C

14

Whenever you turn on the headlights, the taillights also go on.

Taillights are on the:

- ☐ back of the car
- ☐ front of the car

17730

14

back of the car

15

You have learned that electrical circuits are opened and closed by a:

- ☐ battery
- ☐ lamp
- ☐ switch

15

switch

16

The headlights and the taillights are both on the same switch.

When the headlights are turned on, what will taillights do?

_____

16

go on

17

Whenever you turn on the headlights <u>or</u> the parking lights, the taillights will also go on.

This is because they are both controlled by one _____ .

17733

17

switch

18

When you turn on the headlights, what other lights will go on? _____

When you put on the parking lights, what other lights will go on? _____

17734

18

taillights

taillights

19

If headlights, taillights and parking lights are turned on and off by the same switch, they are:

- ☐ in the same electrical circuit
- ☐ not in the same electrical circuit

19

in the same electrical circuit

20

CHECK all the items below that are in the light circuit:

- ☐ high beam
- ☐ generator
- ☐ low beam
- ☐ parking lights
- ☐ starter motor
- ☐ taillights

B. Related Information

1. Types of leather and their uses
2. Tanning processes of leather
3. Kinds of leather
4. The leather industry
5. Types of hardware and finishes

Suggested Tools and Equipment

A. Steel rule
B. Mallets
C. Modeling tools
D. Basic stamping tools
E. Swivel knives
F. Marble slab
G. Revolving punch
H. Snap set
I. Edge creaser
J. Edge trimmer
k. Draw knife
L. Shears
M. Leather knife
N. Oilstones
O. Sewing machine
P. Skiving machine
Q. Sewing awl
R. Belt awl
S. Steel square
T. Dividers
U. Spacing wheel
v. lacing chisel
W. Commercial templates
X. Lacing needles

Materials

A. Various types of leather
B. Assorted threads
C. Tracing paper
D. Finishing materials
E. Dye
F. Rubber cement
G. Thread wax
H. Sponges
I. Lacing, assorted colors
J. Lacing needles
K. Assorted hardware
L. Assorted buckles
M. Belt snaps
N. Assorted dye brushes
O. Oxalic acid

20

high beam

low beam

parking lights

taillights

21

The headlight switch controls all the lights in the _____ circuit.

17737

21

light

22

You know how switches that go "up and down" work.

Headlights switches are turned on when you pull them.

The switch position above that is NOT turned on is switch _____ .

Which switch positions will turn lights on?

- ☐ switch A
- ☐ switch B
- ☐ switch C

17738

22

A

switch B

switch C

23

Switch C is pulled all the way out. The taillights and the headlights will go on.

Switch B is pulled halfway out and the taillights and the _____ lights will go on.

17739

23

parking

24

Parking lights and taillights go on when you pull the light switch:

- ☐ halfway out
- ☐ all the way out

Headlights and taillights go on when you pull the light switch:

- ☐ halfway out
- ☐ all the way out

17740

24

halfway out

all the way out

25

When the light switch is pulled all the way out: (CHECK TWO)

- ☐ low beams are on
- ☐ parking lights are on
- ☐ taillights are on
- ☐ taillights are off

17741

25

low beams are on

taillights are on

26

When the light switch is pulled halfway out the: (CHECK TWO)

- ☐ low beams are on
- ☐ parking lights are on
- ☐ taillights are off
- ☐ taillights are on

17742

26

parking lights are on

taillights are on

27

When you pull the light switch halfway out, the taillights and the _____ go on.

You use these lights when you are:

- ☐ driving in the city
- ☐ driving on the highway
- ☐ parked at the side of the road

17743

27

parking lights

parked at the side of the road

28

When you pull the light switch all the way out, the taillights and the _____ go on.

This is the low headlight beam.

You use it when:

- ☐ driving in the city
- ☐ driving on the highway
- ☐ parked at the side of the road

17744

28

headlights (or low beam)

driving in the city

29

The light circuit is opened and closed by the _____ switch.

17745

29

headlight

30

You are driving and leave the city. Which beam should you have used while driving in the city? _____

Which beam should you switch to when you go onto the highway?

_____

17746

Safety Precautions

A. Keep cutting tools sharp

B. Handle cutting tools with extreme care

C. Cutting tools should be pushed away from body

D. Use caution when working with inflammable materials and acids

Suggested Projects

The instructor is urged to search for ideas in the suggested references and project books. As the ability of the student increases, more challenging projects or other activities should be suggested. Criteria to be considered include:

1. Contributes to the attainment of course objectives
2. Involves appropriate processes and operations
3. Within ability of student
4. Good design
5. Within means of student
6. Within shop facilities

ART METALS

Purpose

Lapidary and jewelry making present an apportunity for industrial arts students to express themselves freely and creatively in an interesting craft activity.

Specific Objectives

A. To develop an avocational interst in semi-precious stones and jewelry.

B. To develop a degree of skill in finishing stones and making jewelry

C. To develop creativity and originality of good design.

D. To develop the ability to select appropriate materials for jewelry.

Suggested Content

A. Manipulative and Technical

1. Terminology
2. Names and descriptions of commonly used stones
3. Polishing stones
4. Fashioning jewelry items
5. Soft soldering
6. Collecting and identifying local and commercial stones
7. Cutting and polishing stones
8. Attaching dop sticks
9. Operating and maintaing equipment
10. Making original patterns for projects
11. Designing and making mountings for stones
12. Laying out design or material
13. Silver soldering
14. Pickling soldered pieces
15. Doming work
16. Engraving

1772

30

low (beam)

high (beam)

31

dimmer switch

To put on the high beam, you step on the DIMMER switch.

You put on the high beam with your:

- ☐ foot
- ☐ hand

You use this beam when you are:

- ☐ in the city
- ☐ on the highway

17747

31

foot

on the highway

32

Before the high beam goes on, the low beam must first be on.

The low beam goes on when you pull the headlight switch:

- ☐ all the way out
- ☐ halfway out

The high beam goes on when you step on the:

- ☐ dimmer switch
- ☐ headlight switch
- ☐ stop light switch

17748

32

all the way out

dimmer switch

33

Once the low beam is on, you can put on the high beam by stepping on the:

- ☐ dimmer switch
- ☐ headlight switch
- ☐ night switch

When you step on the dimmer switch, the _____ beam will go on.

You should use this beam when driving on the _____ .

17750

34

high

highway

35

How do you put on the high beam? _____

35

by stepping on the dimmer switch

36

In order to put on the high beam, the _____ beam must first be put on.

You do this by:

- ☐ leaving the light switch alone
- ☐ pulling the light switch halfway out
- ☐ pulling the light switch all the way out

36

low

pulling the light switch all the way out

37

MATCH the following:

A. low beam

B. high beam

C. parking light

1. _____ light switch halfway out

2. _____ light switch all the way out

3. _____ step on the dimmer switch

17753

37

1. C
2. A
3. B

38

To stop a moving car, you step on the _____ .

When you do this, cars behind you know you are stopping because your BRAKE LIGHT lights up.

This is shown in:

- ☐ picture A
- ☐ picture B

38

brake pedal

picture A

39

Cars behind you know that you are stopping when your car's brake light goes on. This happens when you step on the

_____ .

17. Stamping
18. Setting of stones
19. Polishing and finishing projects
20. Copper enameling

B. Related Information
1. Local sources for materials
2. The commercial value of various stones
3. The lapidary and jewelry making industry
4. Metals used in jewelry making
5. The economics of custom jewelry making

Suggested Tools and Equipment

A. Hand Tools
1. Templates
2. Hand drill
3. Twist drill set
4. Borax slate
5. Charcoal blocks
6. Electric soldering iron
7. Electric soldering gun
8. Soldering coppers

STTI 1773

39

brake pedal

40

When you step on the brake pedal the:

- ☐ brake light goes on
- ☐ brake light goes off
- ☐ taillight goes on
- ☐ taillight goes off

In this way cars behind you know that your car is _____ .

17756

40

brake light goes on

stopping

41

A switch on the master cylinder turns the _____ light on when you step on the _____ pedal.

17757

41

stop

brake

42

The switch on the master cylinder is called the STOP LIGHT SWITCH.

This switch closes the circuit to the brake light and the brake light will:

- ☐ go on
- ☐ go off

The stop light switch will go off when you:

- ☐ step on the brake pedal
- ☐ take your foot off the brake pedal

42

go on

take your foot off the brake pedal

43

The stop light switch is controlled by the:

- ☐ brake pedal
- ☐ clutch pedal
- ☐ gas pedal

Stepping on this pedal is like turning the switch:

- ☐ on
- ☐ off

Taking your foot off the pedal is like turning the switch:

- ☐ on
- ☐ off

43

brake pedal

on

off

44

The brake pedal controls the:

- ☐ dimmer switch
- ☐ headlight switch
- ☐ stop light switch

When this circuit is closed, the _____ lights go on.

44

stop light switch

stop <u>or</u> brake

45

When you step on the brake pedal, the _____ switch closes the circuit to the brake lights.

The brake lights go off when you take your foot off the _____ .

17761

45

stop light

brake pedal

46

MATCH the following:

A. dimmer switch

B. headlight switch

C. stoplight switch

1. _____ closes the brake light circuit

2. _____ turns on the low beam

3. _____ turns on the parking light

4. _____ turns on the high beam

17762

46

1. C

2. B

3. B

4. A

47

The cars behind you should know when you want to make a turn to the left or to the right.

You signal that you are changing direction by using:

- ☐ driving lights
- ☐ directional lights
- ☐ parking lights

47

directional lights

48

Directional lights are used to let other cars know:

- ☐ that you are stopping the car
- ☐ that you are leaving the city
- ☐ in which direction you are going to turn

17764

48

in which direction you are going to turn

49

Cars know you are turning to one side or the other when your:

- ☐ brake light goes on
- ☐ directional lights start flashing
- ☐ taillights go off

17765

5. Drum sander
6. Disc sander
7. Polishing wheel
8. Stone grinder
9. Drill press

X. Liver of solder

1774

49

directional lights start flashing

50

When turning your car to the left, the left directional light should be turned on.

When turning to the right, the _____ directional light should be turned on.

17766

50

right

51

When you are going to make a turn, which lights should be flashing? _____

17767

51

directional lights

52

The TURN SIGNAL SWITCH lets you flash the taillights.

When this switch is down the:

- ☐ left signal flashes
- ☐ right signal flashes

17768

52

left signal flashes

53

When you are going to turn in one direction or another, you move the turn signal switch either:

- ☐ up or down
- ☐ in or out
- ☐ back and forth

53

_____ up or down

54

To let other cars know you are going to change direction, you use the:

- ☐ brake light switch
- ☐ dimmer switch
- ☐ turn signal switch

54

turn signal switch

55

The turn signal switch is used when you want other cars to know you are:

- ☐ changing direction
- ☐ stopping
- ☐ undecided about turning or stopping

55

changing direction

56

To show that you are going to make a turn, use the _____ _____ switch.

17772

56

turn signal

57

MATCH the following:

A. dimmer switch

B. headlight switch

C. stop light switch

D. turn signal switch

1. _____ puts on brake lights
2. _____ puts on directional lights
3. _____ puts on low beam
4. _____ puts on high beam

17773

57

1. C
2. D
3. B
4. A

58

NAME the switch used to show that you are changing directions: _____

58

turn signal switch

59

When you drive in the rain or snow, can you see well out of the window?

- ☐ yes
- ☐ no

17775

Materials

A. Sheet copper (16 - 18 gauge)

B. Copper wire - 22 gauge

C. Enamels

1. Opaque
2. Transparent
3. Crackle

D. Gum tragacanth or baby oil

E. Lump enamel assortment

F. Counter enamels

G. Solder and paste

H. Emery paper

I. Jewelry findings

J. Permacoat or metal lacquer

K. String

L. Steel wool

M. Nitric acid or sulphuric acid

Safety Precautions

A. Treat all pieces of copper in the cooling off area as being potentially hot.

B. Wear asbestos gloves when placing or removing enameled pieces in a large kiln

C. Add acid to water when making a pickling solution

D. When carrying hot firings, be careful of fellow students.

Suggested Projects

The instructor is urged to search for ideas in the suggested references and project books. As the ability of the pupil increases, more challenging projects or other activities should be suggested. Criteria to be considered include:

1. Contributes to the attainment of course objectives
2. Involves appropriate processes and operations
3. Within ability of student
4. Good design
5. Within means of student
6. Within shop facilities

PROGRAM EVALUATION FOR INDUSTRIAL ARTS

Purpose

The need and demand for more intensive evaluation of industrial arts programs in Wyoming has presented many complex problems, the answers to which are not readily soluble through ordinary means. Industrial arts programs, teachers, and evaluations have been quite diverse and may be classified in quality from traditional to progressive and from excellent to poor. This divergence has left much to be desired with respect to a framework of consistent standards from which to base evaluation comparisons.

The following evaluation guidelines have been established and are presently being used in a number of states to evaluate present industrial arts programs. These guidelines can be used as a frame of reference at least in five different ways:

59

no

60

To make driving safe in rain or snow, the front window should be:

- ☐ covered with rain or snow
- ☐ forgotten about
- ☐ kept clear of rain or snow

17776

60

kept clear of rain or snow

61

To keep the windshield clear of rain and snow, the windshield must be cleaned off.

The part that cleans the front window is called the:

- ☐ window holder
- ☐ windshield cover
- ☐ windshield wiper

62

front window

63

Rain and snow are wiped from the windshield by the _____ _____ .

17779

63

windshield wiper

64

In order to make the windshield wipers work, you must turn on the switch that closes the windshield wiper circuit.

Can you guess which of the following switches does this job?

- ☐ dimmer switch
- ☐ stop light switch
- ☐ windshield wiper switch

17780

64

windshield wiper switch

65

MATCH the following.

A. dimmer switch

B. stop light switch

C. windshield switch

D. turn signal switch

1. _____ turns on the brake light

2. _____ turns on the high bean

3. _____ turns on the windshield wipers

17781

65

1. B

2. A

3. C

66

Almost every automobile has a heater.

The heater is used to:

- ☐ cool the inside of an automobile
- ☐ warm the inside of an automobile

66

warm the inside of an automobile

67

To warm the inside of an automobile, you turn on the

_____.

17783

67

heater

68

A switch turns the heater on and off.

When the heater switch is turned to the "on" position the car gets:

- ☐ warmer
- ☐ colder

17784

68

warmer

69

MATCH the following.

A. heater switch

B. dimmer switch

C. windshield wiper switch

1. _____ turns on the heater

2. _____ turns on the high beam

3. _____ turns on the windshield wiper

17785

1. by the teacher as a self evaluation,
2. by the supervisor to become better acquainted with the program,
3. by the administrator to become more familiar with the standards of a quality program,
4. by teacher-educators to give guidance in the planning of pre-service and in-service program developments, and,
5. by the State Department of Education to become better acquainted with the strengths and needs of the total program across the State.

Although this document is written as a set of guidelines and not specifically as an evaluation instrument, it can be used as such by placing numerical values beside each guideline in the space provided. The following value system could be followed:

5 --- Excellent
4 --- Very good
3 --- Good
2 --- Fair
1 --- Poor

Organization

A. Availability of industrial arts courses to all students:

———— An industrial arts course is available to each student at some time during his or her secondary educational program.

B. Schedules, time allotments, and class sizes:

———— Each class group should have a total of 250 classroom minutes per week.
———— Separate classes are provided for beginning and advanced students in grades 7-9 and grades 10-12
———— A 2,000-3,000 sq. ft. lab accommodates a maximum of 20 students with one teacher per period of instruction.
———— A non-teaching period is provided daily for planning and student conferences.

C. Financial support:

———— Differentiation is made between materials and supplies. Materials defined as items identifiable in student projects which students should pay for. Supplies defined as consumables.
———— Provisions are made for adding and replacing tools and equipment as needed.

Nature of Offerings

A. Industrial arts program related to modern industry

———— Industrial growth and expansion from the home unit to the nature and operation of modern industry, including labor and industrial organizations, are emphasized in each area of the program.
———— Students gain an over-view of representative workers and working conditions in a wide range of industrial information, in a variety of fields, is suitable interspersed with other instruction.
———— Program is characterized with student awareness of technological developments in American industry.

69

1. A

2. B

3. C

70

A way for people to be entertained while driving is to turn on the:

- ☐ heater
- ☐ lights
- ☐ radio

70

radio

71

People riding in a car can be entertained by listening to the _____ .

17787

71

radio

72

TEMPERATURE GAUGE

The arrow on the gauge is pointing to the "C" and tells you that the engine is cold.

When the arrow points to the "H," it means that the engines is _____ .

17788

72

hot

73

You can tell if an engine is hot or cold by looking at the:

- ☐ ammeter
- ☐ speedometer
- ☐ temperature gauge

17789

73

temperature gauge

74

A temperature gauge tells you if the engine is _____
or _____ .

17790

74

hot

cold

75

You can tell what an engine's temperature is by looking at a car's _____ .

75

temperature gauge

76

Oil Pressure Gauge

The oil pressure gauge tells how much oil pressure there is in the engine.

0 is for low pressure.

30 is for average pressure.

60 is for:

- ☐ empty
- ☐ high pressure
- ☐ normal pressure

17792

76

high pressure

77

The picture shows:

- ☐ an ammeter
- ☐ an oil pressure gauge
- ☐ a temperature gauge

17793

77

an oil pressure gauge

78

OIL PRESSURE GAUGE

You should NEVER drive an automobile if there is no oil pressure in the engine.

Could you drive a car when the oil pressure reads as shown above?

- ☐ yes
- ☐ no

17794

78

no

79

Most modern cars have warning lights instead of gauges.

When a red warning light goes on, on the dashboard, it means danger!!!

If the red warning light for a car's temperature goes on, it means the car is too hot.

If the warning light goes on for the oil pressure, it means there (☐ is ☐ is no) oil pressure.

17795

B. Program related to interests and needs of the students

---------- Through a variety of carefully planned experiences, students explore their abilities and personal traits, attitudes and values, and gain a better understanding of themselves.

---------- Problems are closely related to the student's world of experiences: student interests are recognized and activities simulating real-life situations are used.

---------- Experiences are provided in each industrial arts area so that a degree of skill in the use of common tools and machines may be developed commensurate with the student's interest, ability, and the scope of the program.

---------- Industrial arts projects are not considered by teachers to be the most important outcome in themselves but as mediums used in the teaching-learning situation to stimulate more complete and effective pupil learning.

---------- Specific efforts are directed toward the development of an orderly, systematic procedure for the intelligent planning of any task.

---------- Basic skills such as reading, writing, arithmetic, speaking, and listening are continually re-emphasized and made part of the instructional program.

---------- Students play an active part in the safety program through the use of student safety supervisors, through inducing safety problems, and the safety tests.

---------- Students are provided with opportunities that allow them to participate in various roles of industrial organizations within the industrial arts program.5

Physical Plan and Services

It is suggested that professional consultants be used whenever possible to determine appropriateness of physical plant and services.

A. Architectural features and services

------- Location: Industrial arts laboratories are centrally located as a unit such as a separate building in a campus plan. Labs are conveniently located for students as well as for adult evening classes. Outside entrance is provided for delivery of supplies and equipment.

------- Size: Floor area, excluding office, finishing room, storage room, and other special-purpose rooms approximates the following formula: class size x 100 sq. ft. - area of the lab.

------- Shape: Lab proportions are to be either square or 1 to 1 1/2 rectangle: minimum width should be 30 feet. All areas of the lab are visible to the teacher at all times.

------- Lighting: Natural light is effectively controlled to eliminate glare. Sufficient supplemental, artificial light, properly diffused and distributed, 100 footcandle of light at bench height throughout the labs.

------- Floors: Floors are in good condition and are suited to the area in which they are located: precautions are taken against slippery floors, machine areas receive special attention.

------- Heating-Ventilation: Adequate controlled heat and ventilation commensurate with best working conditions is provided: Exhaust ventilation is available in areas producing excessive heat, fumes, and gases.

------- Utilities: Where applicable, adequate and properly located gas, water, electrical, and compressed air facilities are provided.

------- Entrances-Exits: Lab has a minimum of two entrance-exit doors with a width of 36 inches or more. Large outside entrance is probided where it is needed. Outside door is constructed so that it can be unlocked from the inside without a key. All main exit doors have panic-bars inside in place of knob handles.

79

is no

80

If a battery is discharging and the car has a warning light instead of an ammeter, what color will be seen? _____

17796

80

red

81

When the engine gets too hot:

- ☐ a red light will go on
- ☐ a red light will go off
- ☐ nothing will happen

17797

81

a red light will go on

82

A red temperature light means the engine has gotten too

_____ .

17798

82

hot

83

If the oil pressure light is red it means that there is no _____ _____.

17799

83

oil pressure

84

A red light on the battery light means the battery is _____ .

17800

84

discharging

85

Red warning lights go on when: (CHECK THREE)

- ☐ there is no oil pressure
- ☐ there is oil pressure
- ☐ the battery is getting charged
- ☐ the battery is getting discharged
- ☐ the engine is at the right temperature
- ☐ the engine is too hot

17801

85

there is no oil pressure

the battery is getting discharged

the engine is too hot

86

Warning lights are used instead of:

- ☐ a battery
- ☐ gauges
- ☐ oil
- ☐ water

17802

86

gauges

87

What do many modern cars use instead of gauges? _____

What color are they? _____

17803

87

warning lights

red

88

Red warning lights are used instead of _____.

When any of them go on it means _____.

17804

88

gauges

danger

89

In your home, too much electricity in wires will start a fire and burn everything out.

Too much electricity in an automobile's wires will also make them burn out.

FUSES are put in circuits to avoid "burn out" dangers.

Fuses are a:

- ☐ danger for the car
- ☐ safeguard for the car

17805

——— Ceilings: Ceiling height is appropriate, i.e., between 12' and 24' in all labs and drawing rooms: ceilings are constructed of a material having a high coefficient of sound absorption.

——— Storage of combustible materials: Ventilated fire-resistant cabinet is provided for the storage of combustible materials. Metal, self-closing container is provided for soiled rags.

——— Background surfaces: Walls are durable, easily cleaned, and have a texture that is adaptable to other considerations from the floor to door height. Sound-absorbing materials are provided on upper walls.

——— Washing facilities: Washing facilities and drinking fountain are provided: size and location are desirable.

——— Health precautions: Air conditioning, adequate fume and dust control systems are provided.

——— Eye safety: Industrial quality eye protection devices are provided for each student, teacher, and visitor and are stored in sanitizing cabinets.

B. Physical features related to program planning

——— Exhibit space: Display area is provided, sufficient in size, properly lighted, and appropriately located.

——— Teacher's office: Separate, convenitent office or instructor area is provided. Privacy is possible for work or conferences during part of the day.

——— Tool and supply ceated: Lab contains a convenient and centrally located tool and supply center and, where applicable, an adequate number of well laid out tool panels in areas for special tools.

——— Color treatment: Color coding as recommended by theNational Safety Council is followed in the coding of dangerous parts and machines. Safety zones are provided around all machines and restricted areas.

——— Supply storage: Adequate and safe storage is provided for all supplies: storage area accommodates full length stock as needed and cares for all appropriate materials.

——— Project storage: Adequate storage is provided for projects under construction and those being finished. Floors in the vicinity of all working areas are kept free of clamped materials and projects in the process of being assembled.

——— Student lockers: Proper distribution is provided for student lockers: lockers are adequate in number and size and dispersed so as to avoid ganging and crowding.

——— Equipment arrangement: Equipment is arranged with reference to the sequence of operations and their relations to other areas. Adequate clearance, commensurate with the function of the machine, is provided around all equipment.

——— Student work stations: An adequate number of work stations are provided free from interference, approximately one-third more than class enrollment. Ample aisle space, four feet desirable, is provided between all areas and point of common usage.

——— Instructional areas: Instructional areas are arranged in relation to one another so that a maximum working relationship exists: areas are also arranged from clean to dirty and from noisy to quiet.

——— Finishing area: Finishing area with the following characteristics is provided: adequate in size, appropriately located, properly lighted and ventilated, easily supervised, and relatively free of dust.

——— Lecture assembly area Ample demonstration and discussion area is provided with a comfortable seat and writing area provided for each student.

——— Planning area: Convenient resource library and/or planning facilities are located away from major machine noises and/or dirty areas. Adequate space is provided for the storage of books, magazines, and idea folders.

89

safeguard for the car

90

It is easier to change fuses than it is to change wires and electrical parts.

It also costs less to change _____ than it does to change wires and electrical parts.

When a fuse burns out, you should _____ it.

17806

90

fuses

change

91

Fuses are put in electrical circuits because they: (CHECK TWO)

- ☐ are easier to change than wires and parts
- ☐ cost less to change than wires and electrical parts
- ☐ were first used in homes
- ☐ will never burn out

17807

91

are easier to change than wires and parts

cost less to change than wires and electrical parts

92

LIGHTS

HEATER

RADIO

The parts listed above have fuses in their circuits. These fuses are put into the circuits to:

- ☐ burn out the circuit
- ☐ keep the wires burning
- ☐ keep the wires from burning out

92

keep the wires from burning out

93

Fuses will burn out (☐ faster than ☐ slower than) wires.

When the fuse burns out, what sl uld you do? _____

17809

93

faster than

change it

94

When a fuse burns out, the circuit is open.

Will a radio play if the circuit has a burned out fuse?

- ☐ yes
- ☐ no

17810

94

no

95

Which would create the smallest problem in a radio?

- ☐ burnt tubes
- ☐ burnt wiring
- ☐ a burnt fuse

17811

95

a burnt fuse

96

When too much electricity goes through a circuit, the fuse will burn out and the circuit will become:

- ☐ closed
- ☐ open

Will parts in that circuit then work?

- ☐ yes
- ☐ no

17812

96

open

no

97

What burns out when too much electricity goes through a circuit?

_____

17813

97

fuses

98

A fuse will burn out when too much electricity goes through a _____ .

This keeps the important wires and parts in that circuit from _____ .

17814

98

circuit

burning out

99

A fuse _____ to save wires and parts from damage.

It will do this by _____ the circuit to stop the flow of too much electricity through the circuit.

17815

Visual aid facilities: Appropriate and convenient film showing facilities are provided within the school; area is well-ventilated, easily darkened, and efficiently managed. Comfortable student seating is provided.

C. Tools and Equipment

——— Tools and equipment selection: Good judgment prevails on all requests for tools and machines; justification of tools and machines is made first on their instructional avlue in meeting student needs.

——— Hand tools and machines: An adequate quantity and variety of tools, instruments, and equipment for the usual types of students' experiences and activities are found in each area of the indstrial arts program.

——— Machine size and type: Unit type machines with self-contained motors are used throughout the industrial arts program; equipment adapted to the size and maturity of the students, i.e., height from the floor to the working surface of the machine, size of a machine, horse-power, speed, capacity, etc.

——— Safety guards and devices: All power machines and manually operated equipment are provided with effective guards and devices. Guards are in place and are used by the operators at all times.

——— Location and identification of controls: Conveniently located and appropriately painted switches and/or control boxes are provided on all power machines. Control boxes are easily accessible from the position of the operator.

——— Electrical safety devices: Master electrical panel is conveniently and centrally located in the lab. all machines, wired in with building, are provided with disconnect switches and have controls providing under-voltage and overload protection. All machines are properly grounded.

——— Tools and equipment maintenaces: All tools and equipment are properly managed; repairs are mwde as soon as the damaged condition is noticed; allcutting surfaces are kept sharp.

Direction of Learning -- Instructional Staff

A. Philosophy

——— Well-defined philosophy of education is held by the industrial arts teachers. Staff members are able to direct, intelligently, their own thinking in clarifying and refining the basic purposes or functions of education, as well as more specific day-to-day teaching goals in their instructional program.

——— Industrial arts program emanates from the needs and interests of boys and girls living in our culture and based upon presently known data about the learning process, the characteristics of adolescents, and developmental tasks.

——— Industrial arts staff members subscribe to the philosophy that a modern, defeasible industrial arts program makes adjustments as new situations demand and as better insights and understanding are achieved in the teaching-learning process.

B. Qualifications of Staff

——— Teachers hold as a minimum requirement the collegiate professional teaching certificate and are endorsed in industrial arts.

——— Graduate work and/or certificate renewal has been in field of industrial arts education.

——— Teachers strive to keep abreast of professional literature.

——— Teachers show competence in a variety of teaching approaches and methods.

99

burns out

opening

100

When fuses burn out, they open _____ .

This happens when too much _____ is going through the _____ .

The windshield is kept clear of rain and snow by the

_____ _____.

17824

C. Teaching Methodology

——— Industrial arts teachers possess satisfactory and comparable competence in a variety of teaching methods and are prepared to utilize one or several ways or techniques in developing meaningful experiences in their instructional program.

——— Methods of instruction used in the industrial arts program focus attention on student-teacher participation, with each playing important roles in the teaching-learning activities.

——— Democratic teacher-pupil and pupil-pupil relationships are fostered as teachers and pupils share variety of real-life democratic experiences in the industrial arts program.

——— Student participation in the evaluation procedures ks made a part of a natural learning situation; teacher and student set up goals and frequently evaluate progress toward the.

——— Primary attention is focused upon concepts of growth, and physical and emotional development of adolescents, as well as an optimum time when certain types of experiences will be most meaningful to students.

——— Recognizing the value of pupil questions, staff members use instructional techniques which encourage pupil inquiry; all student contributions are treated with dignity and sincerity and are utilized in the teaching-learning process.

——— Activities in the industrial arts program are organized so that provisions are made for significant group activities and projects which revolve around problem type situations. These are suitable interspersed with individual enterprises.

——— Information and instructional materials are timely and are presented in a manner that arouses in students an awareness of the importance and need of these data for the solution of problems.

——— Most students undertake appropriate research problems which pertain to the area of science and industry, as a part of their industrial arts experience.

——— Emphasis is placed on a variety of initiatory contacts and experiences in several industrial arts arts areas during the initial phase of the student's program in the industrail arts.

——— Awide variety of suitable materials and techniques of instruction, e.g., self-evaluation by students student plan sheets, experimentation, operation sheet, pupil demonstrations, etc., are used in the program.

------- students are encouraged to draw upon supplementary sources of information and to bring to class material of interest in areas within the scope of the program.

——— Teachers are prompt in meeting their responsibilities, e.g., where is important to keep records, they are maintained in an accurate, concise, and up-to-date manner, starting time of meetings and due-dates on reports are observed.

——— Industrial arts teachers keep their labs clean and neat, good organization is in evidence, there is a place for everything and everything is in its place.

Direction of Learning -- Instructional Activities

——— After establishing their basic goals, most industrial arts teachers organize their instructional plans around activities designed to bring about desired behavior changes in students.

------- Field trips are frequently planned and executed. Community persons are asked to contribute their experiences. Students are often asked to bring in illustrative material. All uses of community resources are carefully planned.

——— Recognition is made of the value of extra-curricular experiences as provisions are made for sutdents to identify themselves with several areas of interest akin to the industrial arts; activities are organized where greatest interest is shown.

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

When you put on your parking lights or your headlights, which lights will also go on? _____

2

Cars behind you know that you are stopping when they see your _____ go on.

3

When you step on your dimmer switch, the low beam will change to _____ beam.

4

You use the _____ to be entertained. To keep warm in a car you turn on the _____ .

5

What is put in electrical circuits as a safety device? _____

6

If there is no oil pressure in an engine, the red _____ _____ will go on.

7

When the ammeter reading is minus (-), it means that the battery is (☐ charging ☐ discharging).

8

The stop light switch opens and closes the circuit for the _____ _____ .

9

When you pull the light switch all the way out, the _____ beam will go on.

10

What can you use to keep your windshield clear of rain? _____

_____

VT 013 129
Auto Mechanics Course. Book 7: The Fuel System.

Basic Systems, Inc., New York, N.Y.
Department of Labor, Washington, D.C.
YMCA of Greater New York, Brooklyn, N.Y.
MF AVAILABLE IN VT-ERIC SET.
PUB DATE - ND 92p.

DESCRIPTORS - *TRADE AND INDUSTRIAL EDUCATION; INDUSTRIAL ARTS; *AUTO MECHANICS; *STUDY GUIDES; WORKBOOKS; *FUELS; MOTOR VEHICLES; ENGINES; MECHANICS (PROCESS)
IDENTIFIERS - *MANPOWER DEVELOPMENT AND TRAINING ACT PROGRAMS; MDTA PROGRAMS

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on the fuel system was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available as VT 013 123-VT 013 146, and part of a series of programed remedial materials develcped by Basic Systems, Inc. (GB)

VT 013 129

——— In developing each phase of the industrial arts program, teachers recognize student ability levels and plan or adjust appropriate learning experiences with students, so that all members of a class may show growth within their area of competency.

——— Evidence is shown of an adequate eye protection program in which all students, teachers, and visitors participate in compliance with Wyoming's eye safety law.

——— Industrial arts teachers work closely with other school areas as they plan their instructional program in an effort to weave together the learnings of various phases of the school's program and provide meaningful, practical applications to what some students may believe to be isolated and unimportant bits of information.

Instructional and Reference Materials

——— Recently published quality textbooks are provided for unit courses along with an adequate resource library within the lab.

——— Up-to-date primary resource materials from industry as well as reference books and/or textbooks are readily available within the lab, for general industrial arts programs.

——— Learning aids, e.g., films, models, mock ups, transparencies, etc., are provided in all industrial arts areas.

——— Reference materials are available describing recent commercial materials, processes, products, occupational trends and monographs.

Direction of Learning

A. Methods of Evaluation

——— Staff members employ a continuous program of evaluation to determine the extent to which pupils approach established goals or objectives in the industrial arts program.

——— Evaluation is considered to be an integral part of the teaching-learning activities by members of the industrial arts teaching staff.

——— Industrial arts teachers carefully record objective data.

——— At periodic intervals, teachers use the most objective means available to determine the reactions of parents and laymen to the order and degree of emphasis that shoul be given various kinds of growth and development experiences.

——— Evaluation includes surveying student reactions to shop experiences near the end of courses and at specified times following graduation, e.g., a year following the student's departure from a junior or senior high school.

——— Industrial arts equipment and facilities are inspected periodically by fire prevention, industrial inspectors, and safety experts.

Outcomes

The student development is measure in terms of meeting the overall objectives of the program and by obtaining the specific behavioral changes that were expected. There is evidence that they have:

——— developed understanding of the broad scope of industry and its place in American culture,

——— discovered their abilities and aptitudes related to the industrial-technical fields,

——— developed a reasonable amount of skill in the safe use of tools and machines, and

——— developed problem-solving abilities related to the materials, processes, and products of industry.

Book 7

1

Gasoline is stored in a _____ _____.

2

The fuel burned in the engine is made up of two things.
What are the two things? _____ .

_____

3

Gasoline gets from the gas tank to the carburetor
through _____ _____.

4

Air is mixed with gasoline in the _____.

5

The mixture of air and gasoline gets into the engine through the _____ _____.

6

Gasoline is pushed up to the carburetor by the _____ _____.

7

When gasoline flows through the fuel system, it goes through gas _____.

17589

1

For a person to have lots of energy, he must eat lots of:

- ☐ food
- ☐ water
- ☐ wood

17840

1

food

2

Food:

- ☐ gives a person energy
- ☐ makes a person tired
- ☐ never affects a person

17941

3

gasoline

4

Gasoline gives the engine the e _____ it needs.

17943

4

energy

5

Gasoline burns in the car's:

- ☐ gas tank
- ☐ engine
- ☐ brake system

17844

APPENDIX

STATE DEPARTMENT OF EDUCATION
Capitol Building
Cheyenne, Wyoming 82001

MEMORANDUM
'Eye Safety Legislation'
the Wyoming State Board of Education, in its meeting of June 12-13, 1967, resolved that:

'It shall be the responsibility of each school district to establish rules and regulations to implement Chapter 100, Session Laws of Wyoming, 1967, which relates to protective eye devices for pupils and teachers.'

CHAPTER 100

Original House Bill No. 80

SCHOOLS--PROTECTIVE EYE DEVICES

AN ACT to require the public schools of the state to supply protective eye devices to pupils and teachers participating in certain courses and to require pupils and teachers desiring protective-corrective eye devices to secure such devices at their own expenses.

Ch. 100 SESSION LAWS OF WYOMING, 1967
Be It Enacted by the Legislature of the State of Wyoming:

Courses Where Protective Eye Devices Required; Trustees to Furnish Devices; Protective-Corrective Devices Responsibility of Individual; Definition

Section 1. Every pupil and teacher in any public school participating in any of the following courses:
(a) Vocational or industrial art shops or laboratories involving use of or exposure to: (1) hot molten metals; (2) milling, sawing, turning, shaping, cutting, or stampting of any solid materials; (3) heat treatment tempering, or kiln firing of any metal or other materials; (4) gas or electric arc welding; (5) repair or servicing of any vehicle; (6) caustic or explosive materials;
(b) Chemical or combined chemical-physical laboratories involving caustic or explosive chemical or hot liquids or solids;

is required to wear industrial quality eye protective devices at all times while participating in such courses or laboratories. The trustees of each school district shall purchase and cause such plano protective eye devices to be placed in such public schools for the eye protection of pupils, teachers and visitors to such classrooms or laboratories.

5

engine

6

If a person gets no food he will not be able to work.

If an engine gets no gasoline it:

- ☐ will run
- ☐ will not run
- ☐ makes no difference

17945

6

will not run

7

Gasoline is being pumped into a car's GAS TANK.

The job of the gas tank is to:

- ☐ add air to the fuel supply
- ☐ store fuel
- ☐ warm up the engine

17846

7

store fuel

8

The fuel system supplies gasoline for the engine.

The fuel supply comes from the:

- ☐ rear axle
- ☐ gas tank
- ☐ gas gauge

17847

8

gas tank

9

PICK UP THE PANEL BOOK

FIND PANEL 1

THEN TURN THIS PAGE AND GO ON

17848

9

NO ANSWER NEEDED

10

LOOK AT PANEL 1

The fuel system and the engine are shown in the panel.

The gas tank stores the fuel:

- ☐ next to the engine
- ☐ under the fuel pump
- ☐ away from the engine

17849

10

away from the engine

11

LOOK AT PANEL 1

In which part of the fuel system is the fuel stored?

- ☐ gas lines
- ☐ gas tank
- ☐ gas station

11

gas tank

12

LOOK AT PANEL 1

Fuel is carried through the fuel system by the parts that look like small pipes.

These parts are called _____ _____.

12

gas lines

13

LOOK AT PANEL 1

The arrows show the direction in which fuel flows through the gas lines.

Fuel flows from the:

- ☐ gas tank toward the engine
- ☐ fuel pump toward the gas tank
- ☐ engine toward the gas tank
- ☐ intake manifold toward the fuel pump

17852

13

gas tank toward the engine

14

LOOK AT PANEL 1

The FUEL PUMP pushes gasoline through the fuel system.

The fuel pump is connected to:

- ☐ one gas line
- ☐ two gas lines
- ☐ double carburetors

14

two gas lines

15

LOOK AT PANEL 1

Both gas lines are connected to the:

- ☐ engine
- ☐ gas tank
- ☐ fuel pump

17854

(c) Any person desiring protective-corrective lenses instead of plano protective devices supplied by the school trustees shall at his own expense procure and equip himself with industrial quality eye protective devices.

(d) The phrase 'industrial quality eye protective devices', as used in this section, means devices meeting the standards of the American Standard Safety Code for Head, Eye, and Respiratory Protection, Z2.1-1959 promulgated by the American Standards Association, Incorporated.

Approved February 16, 1967.

THE STATE OF WYOMING
Department of Education
Cheyenne

MEMORANDUM

DATE: January 29, 1969
TO: Industrial Arts Instructors
FROM: Charles M. Burke, Industrial Arts Consultant
SUBJECT: Safety Color Code

Accident prevention programs, over the past forty years, have been helping save the lives, limbs and sight of thousands of people at work in industrial plants throughout the country. The use of color in these programs has played a very important part in indentifying hazards detrimental to safe working conditions.

In 1953, the Safety Color Code was approved by the American Standards Association. The Code defines the application of color to specific purposes in connection with accident prevention and recommends the specific colors to be used as markings of physical hazards, the location of safety equipment, and the identification of fire and other protective equipment. ASA recommends Red, Orange, Yellow, Purple, Blue, Green, Black and White for Safety Painting, Pipe Coding and Safety Signs.

SAFETY PAINTING

Red -- Fire Protection Equipment and Apparatus
Fire Alarm Boxes
Fire Blanket Containers
Fire Extinguishers
Fire Hose Cabinets
Fire Hydrants
Fire Exit Signs
Fire Pumps
Fire Sirens
Stand Pipes
Post Indicator Valves
Sand Pails
Hose Reels

15

fuel pump

16

LOOK AT PANEL 1

The CARBURETOR is at one end of a gas line.

The part of the fuel system at the end of the other gas line is the:

- ☐ gas tank
- ☐ exhaust manifold
- ☐ intake manifold

17855

16

gas tank

17

The arrows show that gasoline is pumped through the gas lines to the:

- ☐ fan
- ☐ carburetor
- ☐ generator

17856

17

carburetor

18

LOOK AT PANEL 1

The INTAKE MANIFOLD gets a mixture of gasoline and air from the carburetor.

The intake manifold is part of what system? _____

18

fuel system

19

LOOK AT PANEL 1

The gas tank is at one end of the fuel system.

The part next to the engine at the other end is called the:

- ☐ engine block
- ☐ intake manifold
- ☐ fuel pump

17958

19

intake manifold

20

LOOK AT PANEL 1

The part mounted on the intake manifold is called the c _____ .

17859

20

carburetor

21

CLOSE THE PANEL BOOK

THEN TURN THIS PAGE AND GO ON

17860

21

NO ANSWER NEEDED

22

The carburetor mixes air and gasoline to make a VAPOR.

This vapor mixture should be called a:

- ☐ fuel vapor
- ☐ water vapor
- ☐ spark vapor

17861

22

fuel vapor

23

One kind of vapor you have seen is steam.

Steam is a vapor made of:

- ☐ air and dust
- ☐ air and exhaust
- ☐ air and water

17862

23

air and water

24

CIRCLE the vapor that results when boiling water is mixed with air:

steam smoke soda

17863

24

steam

25

Steam is a vapor of air and water.

Fuel vapor burned in a car's engine is made of air and:

- ☐ oil
- ☐ lighter fluid
- ☐ gasoline

17864

Danger -- Use RED to identify cans and other containers used for the storage of flammable liquids, and identify contents in large white letters.

Red Lights warn of danger. Use on barricades and on temporary construction.

Stop bars on hazardous machines. Stop buttons on electrical switches. Use RED

Orange -- emphasizes hazardous parts of machines or energized equipment which could possibly cut, crush or shock. Following is a partial list of applications:

Interior of gear guards
Exterior of switch boxes on machines
Interior of transmission guards for gears, pulleys
Interior of switch and fuse boxes
Guards over power blades; guards at cutting or crushing points
Exposed parts (edges only) pulleys, gears, rollers, power jaws

Yellow -- demands caution. Use it to warn of physical hazards such as those that a worker my strike against, stumble, fall, trip, or be 'caught in-between.'

Use alternating Yellow and Black striping where extra emphasis to stationary hazards is required.

The following is a partial list of suggestions for the application of Yellow:

Construction Equipment
Moving parts of machines
Moving objects
Handrails, guardrails
Platform edging
Floor zone marking
Caution signs
Markings for low projections

Green -- designates safety. GREEN with a WHITE cross is generally used to mark medical-aid areas. The following is a partial list of suggestions for the application of Green.

First aid dispensary
Stretcher equipment or containers
Safety bulletin boards
First aid kits

Blue -- denotes caution, limited to warning against starting machinery or equipment that is under repair. Warnings, such as a Blue tag, markers, etc., with White lettering reading 'Do Not Start' should be displayed conspicuously on the starting switch or power source of machinery.

25

gasoline

26

The carburetor:

- ☐ mixes air and gasoline
- ☐ separates air from gasoline

17865

26

mixes air and gasoline

27

A mixture of air and gasoline is called:

- ☐ steam
- ☐ fuel vapor
- ☐ water vapor

17866

27

fuel vapor

28

What happens inside a carburetor?

- ☐ gasoline is mixed with air
- ☐ gasoline is mixed with oil
- ☐ gasoline is turned to steam

17867

28

gasoline is mixed with air

29

CHECK the two jobs of the carburetor:

- ☐ makes an air-gasoline liquid
- ☐ makes an air-gasoline vapor
- ☐ puts the air-gasoline liquid into the engine exhaust
- ☐ puts the air-gasoline vapor into the intake manifold

17868

29

makes an air-gasoline vapor

puts air-gasoline vapor into the intake manifold

30

LOOK AT PANEL 1

The carburetor is mounted on the _____ _____ .

The part of the fuel system that is mounted on the engine is the:

- ☐ carburetor
- ☐ fuel tank
- ☐ intake manifold

What is mounted on to the intake manifold? _____

The carburetor and the intake manifold (☐ are ☐ are not) two different parts.

17869

30

intake manifold

intake manifold

carburetor

are

31

In the diagram below, CIRCLE the part that puts the air-gasoline vapor into the intake manifold.

17870

31

32

The carburetor mixes _____ and _____.

It then puts this mixture into the _____ _____.

32

air (and) gasoline

intake manifold

33

The carburetor is connected to the intake manifold at point A.

Fuel comes into the carburetor at B through the:

- ☐ gas tank
- ☐ fuel pump
- ☐ gas line

17872

33

gas line

34

LABEL the carburetor in the diagram below.

17873

34

35

The carburetor gives the fuel vapor (air-gasoline mixture) to the _____ _____ .

17874

Black , White, or a Combination of Black and White -- Black, white, or a combination of these colors is generally used for traffic, zone, and housekeeping markings. Black and White stripes are often applied on barricades and crosswalks.

SAFETY SIGNS

Safety colors gain added visual impact when used in conjunction with safety signs in industrial plants. The American Standards Associations color recommendations for these signs are as follows:

Danger Signs --

Upper portion: Red oval background with letters reading 'Danger'.

Lower portion: White background with Black letters spelling out the particular danger.

Caution Signs--

Upper panel: Yellow letters with Black background reading 'Caution'.

Lower panel: Yellow background with Black letters giving the reason for the caution.

Safety Instruction Signs --

Upper panel; Green with white lettering reading: s : 'safety Instructions', or other suitable wording.

Lower panel: White background with instruction lettered in Black.

General Instruction Signs --

Acceptable in any color, except Red or Yellow

35

intake manifold

36

The gas line gives:

- ☐ gasoline to the carburetor
- ☐ the fuel vapor to the intake manifold

17875

36

gasoline to the carburetor

37

Gasoline reaches the carburetor through the:

- ☐ gas lines
- ☐ gas tank
- ☐ intake manifold

17876

37

gas lines

38

A gas line connects the: (CHECK ALL CORRECT ANSWERS)

- ☐ gas tank directly to the fuel pump
- ☐ gas tank directly to the carburetor
- ☐ carburetor directly to the fuel pump

17877

38

gas tank directly to the fuel pump

carburetor directly to the fuel pump

39

To what parts of the fuel system are the arrows pointing?

_____

17878

39

gas lines

40

Which of the following best describes how gasoline flows through the fuel system?

- ☐ gas tank → gas line → carburetor → fuel pump → intake manifold
- ☐ gas tank → fuel pump → gas line → carburetor → gas line
- ☐ gas tank → gas line → fuel pump → gas line → carburetor

40

gas tank → gas line → fuel pump → gas line → carburetor

41

Gasoline flows from the gas tank to the fuel pump and from the fuel pump to the carburetor through _____ _____ .

17880

41

gas lines

42

CIRCLE the gas lines.

17881

42

43

LABEL the part connected to the gas lines.

43

fuel pump

What does the fuel pump do? _____

17920

81

pumps gasoline from the gas tank to the carburetor

82 THIS IS THE END OF BOOK 7

17921

AUTO MECHANICS COURSE

POST-TEST BOOK 7: THE FUEL SYSTEM

A BASIC SYSTEMS PROGRAM

17922

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

Gasoline gets through the fuel system by flowing through _____.

2

Since the carburetor is higher than the gas tank, gasoline must be moved upwards by the _____.

3

Where is gasoline stored? _____

4

17922

The carburetor is mounted onto the _____.

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on the cooling system was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

AUTO MECHANICS COURSE

PRE-TEST BOOK 8: THE COOLING SYSTEM

A BASIC SYSTEMS PROGRAM

17929

1

For an engine to run at the right temperature, the cooling system must be filled with:

- ☐ gasoline
- ☐ ice
- ☐ water

2

The fan is used to:

- ☐ pull air through the radiator
- ☐ pull air through the water pump
- ☐ push air through the radiator
- ☐ push air through the water pump

3

Water gets through the cooling system because it is pumped by the _____.

4

Water in the cooling system must cool off when it takes heat away from the engine. This happens when the water is in the _____.

5

Hoses are used to get water:

- ☐ to the engine where is stays
- ☐ to the radiator where it stays
- ☐ back and forth between the engine and the radiator

6

The water jacket is inside the _____.

7

When water goes through an engine, it goes from the:

- ☐ bottom to the top
- ☐ top to the bottom
- ☐ back to the front

8

When you put water into the cooling system, you pour it into the:

- ☐ engine
- ☐ radiator
- ☐ thermostat
- ☐ water pump

9

The thermostat will:

- ☐ close if the engine is too cold
- ☐ push water through the cooling system
- ☐ open if the engine is too warm

10

When water flows around the hot spots in the engine, it is flowing through the _____.

11

A car is left standing in very cold weather. The thermostat will be:

- ☐ open
- ☐ closed

TITLE III

HUGHSON UNION HIGH SCHOOL
WRITTEN BY:
EDGAR WILLIAMS
REX HAYHURST
CHARLES VAUGHN

VT011497

12

A car is left standing in below freezing weather. What must you add to the radiator to keep the water in the cooling system from freezing?

- ☐ antifreeze
- ☐ antiknock
- ☐ oil
- ☐ water

13

Water in the radiator is cooled off by the turning motion of the _____.

1

If a running engine gets too hot, the engine parts will stick together and the engine will stop running.

In the automobile trade, this is called a SEIZED ENGINE.

If an engine gets too hot, it will:

- ☐ continue running
- ☐ stay the same as before
- ☐ stop running

17934

1

stop running

2

Because of small explosions of gasoline in auto engines, the engines can get very hot.

An automobile engine should be:

- ☐ as hot as possible
- ☐ cooled off in some way

2

cooled off in some way

3

If the engine gets too hot, the car can't run the way it should.

So there must be a way to:

- ☐ put heat into the engine
- ☐ take heat out of the engine

17936

3

take heat out of the engine

4

The COOLING SYSTEM of a car uses water to cool the hot engine.

Will an engine run well without water?

- ☐ yes
- ☐ no

17937

4

no

5

PICK UP THE PANEL BOOK

FIND PANEL 1

THEN TURN THIS PAGE AND GO ON

17938

5

NO ANSWER NEEDED

6

LOOK AT PANEL 1

Engine B is getting water into its RADIATOR from a water hose.

The radiator is part of a car's:

- ☐ brake system
- ☐ cooling system
- ☐ exhaust system

6

cooling system

7

LOOK AT PANEL 1

The water flowing in engine A was put into the cooling system at the:

- ☐ hose
- ☐ engine
- ☐ radiator

7

radiator

8

LOOK AT PANEL 1

If the water flows between the radiator and the engine, how would it get back and forth?

- ☐ through the water hose
- ☐ through the two hoses on the engine

8

through the two hoses on the engine

9

Why would water flow back from the engine to the radiator?

- ☐ to put heat into the engine
- ☐ to take heat out of the engine

to take heat out of the engine

10

CLOSE THE PANEL BOOK

THEN TURN THE PAGE AND GO ON

17943

10

NO ANSWER NEEDED

11

The radiator has small pipes to hold the _____.

17944

11

water

12

Water to cool the engine is stored in the:

- ☐ crankcase
- ☐ gas tank
- ☐ radiator

17945

12

radiator

13

CIRCLE the radiator in the drawing below:

17946

13

14

MATCH the parts at the left with the actions at the right:

A. brake line

B. engine

C. radiator

1. _____ gets very hot and needs cooling

2. _____ holds water for cooling

17947

14

1. B
2. C

15

Arrow A points to the _____

17948

15

radiator

16

In the drawing above the heavy arrows show how air flows through the radiator.

The fan is:

- ☐ pulling the air
- ☐ pushing the air

17949

16

pulling the air

17

The water in the radiator is cooled by:

- ☐ quick freezing
- ☐ overflow valves
- ☐ air flow

17950

17

air flow

18

The fan is used to pull air through the:

- ☐ engine
- ☐ radiator
- ☐ radiator hoses

17951

18

radiator hoses

19

Water in the cooling system cools the engine.

What cools the water?

- ☐ air
- ☐ gas
- ☐ oil

RATIONALE

On the following pages is a program that will help the student become familiar with shop safety, proper use of hand tools, and machine hazards.

PRIMARY IDEA

Auto Shop Safety

SECONDARY IDEAS:

1. General Auto Shop Safety
2. Safety in Using Hand Tools
3. Safety in Using Machine Tools

19

air

20

What makes the air flow through the radiator?

- ☐ the engine
- ☐ the fan
- ☐ the radiator

17953

20

the fan

21

Does the fan push or does it pull the air through the radiator?

- ☐ it pulls the air through
- ☐ it pushes the air through

17954

21

it pulls the air through

22

CIRCLE the fan in the drawing below:

17955

22

23

MATCH the parts at the left with the actions at the right.

A.	engine	1. _____	holds water for cooling
B.	fan	2. _____	pulls air through for cooling water
C.	radiator		

17956

23

1. C
2. B

24

The auto part in the picture is the:

- ☐ flywheel
- ☐ fan
- ☐ radiator

24

fan

25

DANGER

ALWAYS BE CAREFUL WHEN YOU ARE WORKING ANYWHERE NEAR THE FAN ON A CAR ENGINE.

YOUR HAND OR YOUR CLOTHING MAY GET CAUGHT IN THE FAN, AND YOU COULD BE SERIOUSLY INJURED.

NO ANSWER NEEDED

GO ON TO NEXT PAGE

258 OF 327

ED

056 238

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

25

NO ANSWER NEEDED

26

TOP OF THE ENGINE

BOTTOM OF THE ENGINE

From this picture you can see that:

- ☐ all parts of the engine are on the same level
- ☐ some parts are higher than other parts

17959

358

26

some parts are higher than other parts

27

Water flows from Hose A at the bottom to Hose B at the top because:

- ☐ water in the system is always cool
- ☐ water is pumped through the cooling system
- ☐ water flows uphill by itself

17961

27

water is pumped through the cooling system

28

Water goes into the engine from the bottom of the radiator.

Water gets to the top of the engine because:

- ☐ the water will flow uphill by itself
- ☐ a pump pushes the water through the engine
- ☐ the car moves forward at high speed

17962

INSTRUCTIONAL OBJECTIVES

When completed with this package you will be able to:

1. List at least ten typical auto shop safety accidents.
2. Know how to respond in case of an accident that might occur in the auto shop
3. Pass a safety test with 100% score.
4. You will be expected to demonstrate that you understand by practicing shop safety at all times.
5. You will be expected to follow any school safety or fire drill.

1794

28

a pump pushes the water through the engine

29

The cooling system has a WATER PUMP to push water through the system (see arrows).

Water flows from the radiator to the engine:

- ☐ through the hose at the top
- ☐ through the hose at the bottom
- ☐ through the radiator pipes

17963

29

through the hose at the bottom

30

When the car's engine is running, the water pump pushes the water:

- ☐ from the engine to the radiator
- ☐ from the radiator to the engine

17964

30

from the engine to the radiator

31

CIRCLE the water pump in the drawing above.

17965

31

32

CIRCLE the radiator.

17966

32

33

NAME the system that the water pump pushes water through.

_____

17967

33

cooling system

34

Can water go through the cooling system without the water pump?

- ☐ yes
- ☐ no

17968

35

pushes water through the cooling system

36

The arrow is pointing to the _____ _____ of the cooling system.

17970

36

water pump

37

fan	radiator	water pump
hose	water jacket	

Using the parts listed above, COMPLETE the following sentences.

The part that holds water is called the _____.

Air is pulled through the radiator by the _____.

Water in the cooling system is pushed by the _____.

17971

37

radiator

fan

water pump

38

If water is going into the engine it means that:

- ☐ the fan is not working
- ☐ the water pump is not working
- ☐ the water pump is pushing the water through

17972

This is a pre-test for you. Answer the following questions before going on to the activities listed. If you can pass this test with a score of 100%, you may be exempt from this LAP.

PRETEST

Complete test as explained

TRUE- FALSE (Write T for true, F for false.)

____ 1. The shop needs to be clean if it is going to be safe.

____ 2. Grease and oil that is spilled on the floor should be cleaned up at the end of the period.

____ 3. When the fire drill bell rings you should run to the nearest exit.

____ 4. It is permissible to short circuit a battery for testing purposes.

____ 5. The wire buffer should not be used without eye protection.

____ 6. Sharp tools should not be carried in the pockets.

____ 7. Lift with your legs instead of your back.

____ 8. Screwdrivers make good pry bars.

____ 9. Guards can be removed from grinders if eye protection is worn.

____ 10. It is a good practice to stand to one side of the grinding wheel when starting it.

____ 11. When welding with the arc welder, safety goggles designed for gas welding may be used.

____ 12. Throwing things in the shop is not permitted.

____ 13. Students should test fire extinguishers at least twice a year.

____ 14. Prior to running an engine, be sure that it is fastened securely to its stand.

____ 15. It is necessary to report to the teacher any equipment that is not operating correctly.

ae1795

38

the water pump is pushing the water through

39

DRAW an arrow pointing to the water pump in the picture below:

17973

39

40

PICK UP THE PANEL BOOK

FIND PANEL 1 AGAIN

THEN TURN THE PAGE AND GO ON

17974

40

NO ANSWER NEEDED

41

LOOK AT PANEL 1

For each engine, how many hoses are there between the radiator and the engine? _____

17975

41

2 or two

42

LOOK AT PANEL 1

Water gets to the engine and back to the radiator by going:

- ☐ around the hoses
- ☐ out of the cooling system
- ☐ through the hoses

42

through the hoses

43

LOOK AT PANEL 1

The bottom hose takes water from the radiator into the engine. (See arrows, Engine A)

The top hose takes the water:

- ☐ from the engine to the radiator
- ☐ from the radiator to the engine

43

from the engine to the radiator

44

LOOK AT PANEL 1

Water going <u>from</u> the engine <u>to</u> the radiator flows through the (see arrows, Engine A):

- ☐ bottom hose
- ☐ top hose

44

top hose

45

LOOK AT PANEL 1

Water goes from the radiator to the engine and back again by going:

- ☐ out of the cooling system
- ☐ through the fan
- ☐ through through the hoses

17979

45

through the hoses

46

LOOK AT PANEL 1

The bottom hose takes water to the _____ .

The top hose takes water back to the _____ .

17980

46

engine

radiator

47

LOOK AT PANEL 1

The water in the radiator is cool.

It enters the engine through the bottom hose.

Will the water get hot in the engine?

- ☐ yes
- ☐ no

47

yes

48

CLOSE THE PANEL BOOK

THEN TURN THE PAGE AND GO ON

17982

____ 16. Small tools can be dangerous if they are left on the floor.

COMPLETION (Write correct answers in spaces provided.)

1. When working on an automobile engine, make sure that the battery is _____.
2. _____ should not be used for cleaning parts.
3. _____ clothing should not be worn in the shop.
4. There should be only _____ operators to each machine.
5. All injuries should be reported to the _____.
6. Batteries contain _____ which is dangerous.
7. Battery chargers should be _____ when connecting or disconnecting a battery.
8. _____ is used for putting out gasoline and oil fires.
9. Exhaust gases are _____.
10. Sharp tools should not be carried in _____.

MULTIPLE CHOICE (Write letter of correct statement.)

____1. When using a buffer or wire wheel, the material should be held:

(a) above and behind the center of the wheel
(b) below and behind the center of the wheel
(c) below and in front of the center of the wheel
(d) above and in front of the center of the wheel

____2. When lifting a heavy object up from the floor:

(a) keep your legs bent and lift with your arms
(b) keep your back straight and lift with your legs
(c) keep your back and legs bent, and lift with your legs
(d) keep your legs straight and lift with your back

____3. Select the best staement about creepers.

(a) Creepers can be used for moving engines as well as people.
(b) Always leave a creeper just where you get off of it.
(c) Keep creepers where no one can step on them.
(d) Standing on a creeper is a good practice.

96L92

48

NO ANSWER NEEDED

49

When water goes from the radiator to the engine and back again, the water passes through the two _____ .

17983

49

hoses

50

The two hoses on the radiator carry water:

- ☐ from the radiator to the engine and back again
- ☐ to the engine where it stays
- ☐ to the radiator where it stays

17984

50

from the radiator to the engine and back again

51

SHADE in the hoses in the picture below.

17985

51

52

The water pump is pushing water through the cooling system.

The water is going through the:

- ☐ bottom hose only
- ☐ top hose only
- ☐ both hoses

17986

52

both hoses

53

PREVIEW FRAME

Now you will learn how water gets to the hot places in the engine.

NO ANSWER NEEDED

GO ON TO NEXT PAGE

53

NO ANSWER NEEDED

54

Some parts of the engine are hotter than others.

To cool the engine correctly, the water should go to the:

- ☐ cool spots
- ☐ hot spots

17988

54

hot spots

55

If you are very hot and take a shower, water flows all around you.

Cool water flowing around you will:

- ☐ cool you off
- ☐ make you feel the same
- ☐ warm you up

17989

55

cool you off

56

Cool running water lowers your body temperature.

Cool flowing water will:

- ☐ make the engine run hot
- ☐ make the engine run cooler
- ☐ not change how hot or cool the engine is

17990

56

make the engine run cooler

57

If you are very hot and take a shower, what will this do to your temperature?

- ☐ lower it
- ☐ keep it high

57

lower it

58

A running engine has many explosions in it.

HEAT made by the constant explosions is taken away by:

- ☐ flowing water
- ☐ water that stays in the engine
- ☐ water that stays in the radiator

17992

____4. Carbon monoxide gas comes from the exhaust of automobile engines. It is:

(a) a poison
(b) light blue in color
(c) lighter than air
(d) easy to smell

____5. Gasoline:

(a) can be used for cleaning parts.
(b) will not burn unless it is under pressure inside of the engine
(c) vapors are highly explosive
(d) should be stored in open containers

ESSAY

1. List three rules for using hand tools.

2. Why should oil or grease be cleaned up immediately after it is spilled on the floor?

3. Explain how a heavy object should be lifted.

4. List the kinds of fire extinguishers that are available in the shop and explain how they are used.

5. Give several reasons why accidents happen.

Now check your answers on Page 15 of this LAP. If you passed this test with a score of 100% and you feel you can pass the final test, see your instructor. If you don't feel you are ready for the final exam, go on to the activities of this package.

58

flowing water

59

Water flows around the parts of the engine where there are explosions and heat. It surrounds these _____ spots like a jacket of water.

17993

59

hot

60

The cylinders and pistons are the hottest spots in the engine.

A jacket of water flows around the engine to keep the engine:

- ☐ hot
- ☐ cool
- ☐ wet

This jacket of water is called the _____ JACKET.

17994

60

cool

WATER

61

The water jacket surrounds the pistons and cylinders. Water flows through it, keeping the engine cool. PUT check marks in the water jacket above.

17995

61

62

PICK UP THE PANEL BOOK

FIND PANEL 2

THEN TURN THIS PAGE AND GO ON

17996

62

NO ANSWER NEEDED

63

LOOK AT PANEL 2

Water flows from the bottom of the engine to the top of the engine and takes away the extra engine heat.

It flows in the engine's:

- ☐ crankcase
- ☐ cylinders
- ☐ water jacket

63

water jacket

64

LOOK AT PANEL 2

The water jacket keeps water flowing:

- ☐ around the pistons and cylinders of the engine
- ☐ next to the radiator
- ☐ around the fan belt

17998

64

around the pistons and cylinders of the engine

65

The part that directs the cooling water around the hot spots in the engine is called the w_____ j_____.

17999

65

water jacket

66

CLOSE THE PANEL BOOK
THEN TURN THIS PAGE AND GO ON

18000

This is a diagram of the cooling system.

NAME the shaded part.

_____ _____

18001

67

water jacket

68

fan radiator water pump

hoses water jacket

Using the parts listed above, COMPLETE the following sentences.

Cooling air is pulled through by the _____.

Water is held for cooling in the _____.

Water in the cooling system is pushed by the _____.

REQUIRED ACTIVITIES

1. Read the class text book on general safety practices.

2. Read safety instructions in activity package.

3. See safety film "Primitive Pete" (This will be shown to the class by the instructor.)

4. Sign up for small group and tour the auto shop and list 10 possible safety hazards.

5. Write down in order, the things you would do if an engine of a car caught fire.

6. Demonstrate to the instructor the correct and safe procedure for use of the power grinder.

7. On assignment from instructor, get the assigned extinguisher and give a mock demonstration of how you would use it.

1798

68

fan

radiator

water pump

69

fan radiator water pump

hoses water jacket

Using the parts listed above, COMPLETE the following sentences.

Water is carried from the radiator to the engine and back to the radiator by the _____ .

Hot spots in the engine are cooled by water in the _____ .

69

hoses

water jacket

70

WINTER NOTE

In very cold weather, water in the cooling system can freeze. Next, you will learn how the cooling system is protected against freezing up.

NO ANSWER NEEDED

GO ON TO NEXT PAGE

70

NO ANSWER NEEDED

71

If a car is running, the water in the cooling system:

- ☐ stops flowing
- ☐ is heated by the engine
- ☐ is cooled by the engine

71

is heated by the engine

72

When the engine stops running, the water pump:

- ☐ continues running
- ☐ stops running

When an engine is not running, the water in the cooling system:

- ☐ continues flowing
- ☐ stops flowing

18006

72

stops running

stops flowing

73

A car is parked on the street overnight. The temperature drops to 22° (below freezing).

The water in the cooling system:

- ☐ freezes and becomes ice
- ☐ is raised to a higher temperature
- ☐ stays the same

73

freezes and becomes ice

74

20° Temperature

The lake is frozen. The engine is not running.

Will the water in the radiator and in the water jacket freeze?

- ☐ yes
- ☐ no

18008

74

yes

75

If the water in the cooling system freezes, it will cause damage and may crack the engine block.

To keep the engine from freezing you should:

- ☐ keep the heater going at all times
- ☐ put something into the water so that it will not freeze

75

put something into the water so that it will not freeze

76

Antifreeze is a liquid that mixes with water to keep it from freezing.

Antifreeze should be used:

- ☐ in the winter
- ☐ only in the summer

18010

76

in the winter

77

When antifreeze mixes with water, the mixture will not

- ☐ freeze
- ☐ cool the engine
- ☐ flow through the water pump

18011

77

freeze

78

Where would the serviceman put in the antifreeze?

In the:

- ☐ fan belt
- ☐ front seat
- ☐ radiator

18012

INSTRUCTIONAL SHEET #1

GENERAL SAFETY RULES

1. The automotive laboratory should be kept clean.

2. No one should use the machines unless he has had proper instruction in their use.

3. Scuffling, playing,throwing,loud talking, and running is ABSOLUTELY FORBIDDEN!

4. The floor should be kept clear of all scrap materials,parts, and tools.

5. All injuries,even a small scratch or cut, must be reported to the teacher immediately.

6. If automotive parts, hoses,jacks, extension cords, and other objects are carelessly left on the floor, they may cause bad falls. These items should be kept out of walkways.

7. All students should be familiar with the location and use of all fire fighting equipment in the shop.

8. All students must be familiar with the emergency exits.

9. It is most important that proper ventilation be maintained in the automotive laboratory at all times and especially when running gasoline engines.

10. It is dangerous to work in semi-darkness.

11. When working under a car, protect your eyes.

12. It is dangerous to talk to an operator of a machine which is running.

13. The power must be OFF when oiling or cleaning any type of equipment.

14. Observe good housekeeping at all times. Wipe up grease,water, oil, etc., immediately,or cover with sawdust or sand.

15. Be careful with sharp pointed oil cans. Do not leave them where someone may fall on them.

16. Heavy parts, such as transmissions or differential assemblies, must be securely blocked to prevent rolling when on a bench.

17. When carrying rods,pipes ,or strap iron, always hold the ends in front of you . . . low.

GO ON TO PAGE 8

BEST

78

radiator

79

The _____ is mixed with water in the radiator.

Will it then get into the rest of the cooling system?

- ☐ yes
- ☐ no

18013

79

antifreeze

yes

80

The engine above is seriously damaged. The cold weather froze the water. The water turned to ice and cracked the lower part of the engine.

Was antifreeze put into the radiator?

- ☐ yes
- ☐ no

80

no

81

A mixture of water and antifreeze will:

- ☐ freeze
- ☐ not freeze

81

not freeze

82

It is winter. The car has been outside all night.

When the car is first started, the engine will be:

- ☐ cold
- ☐ hot
- ☐ warm

82

cold

83

Water circulating in the cooling system keeps the engine:

- ☐ warm
- ☐ cool

If water doesn't flow from the engine to the radiator and back, the engine will:

- ☐ warm up slowly
- ☐ warm up fast
- ☐ stop running

83

cool

warm up fast

84

To warm up a cold engine, you must warm up the water.

To warm up a cold engine, you want the water to:

- ☐ stay in the engine and warm up
- ☐ flow back to the radiator before it warms up

84

water to stay in the engine and warm up

85

The water in this engine will warm up quickly because the water is:

- ☐ going through the radiator
- ☐ staying in the engine

18019

85

staying in the engine

86

A valve called a thermostat is located where the top hose meets the water jacket.

When the thermostat is closed, water:

- ☐ flows to the radiator and cools off
- ☐ stays in the engine and warms up

86

stays in the engine and warms up

A spring controlled THERMOSTAT opens or closes to control the flow of water through the top hose.

The thermostat is open in drawing: ☐ A ☐ B

18021

87

A

88

The water is <u>not</u> going from the engine to the radiator and back.

This is because the thermostat is:

- ☐ closed
- ☐ open

INSTRUCTIONAL SHEET #2

18. The motion involved in striking objects or cutting materials, must be done away from yourself and other students.

19. The transmission should be out of gear before starting and engine.

20. Handle brake fluid carefully. Keep it away from your eyes.

21. Do not use the mouth to start a siphon from a gasoline tank. Certain gasoline contains poisonous TETHAETHYL LEAD.

22. Never consider a job complete until a check has been made to make sure that all lock washers, cotter pins, or other locking devices are in place. Be sure cotter pin ends do not protrude.

23. Keys are not to be left in ignition switches.

24. No student is to be inside an automobile unless he is doing an assigned job and working on the job.

25. Distrubing another student while he is working is dangerous.

26. Walk, DO NOT RUN, in the automotive laboratory.

27. Students must get permission before test running an engine.

28. When in doubt as to the safety of any operation of job being performed in the laboratory, ask the teacher before proceeding further.

29. Cultivate personal caution al all times. This is one of the big lessons to be learned in this laboratory.

AIR LINES

1. Don't play with the compressed air hose. The air=hose must be turned so as not to be aimed at anyone.

2. Air pressure must not be used to clean one's person or clothing.

3. When cleaning out steel chips or carbon, goggles must be worn.

4. Hoses are to be coiled and stored when not in use.

BATTERIES AND BATTERY CHARGERS

1. Handle batteries with care. Wash hands after handling.

2. Never stand over a battery when working on it. An explosion may spray acid into your eyes.

88

closed

89

A_

B_

The thermostat closes to stop water flow.

- ☐ hot

INSTRUCTIONAL SHEET #3

3. Get help when lifting large batteries. Don't hold battery in your arms. Use battery strap or carrier.

4. Don't short circuit a battery to test it.

5. If there is a short circuit, do not touch shorted wires with bare hands.

6. When doing work on transmissions,clutch,or engine, disconnect the cable from the battery to starter.

7. In handling batteries, avoid splashing acid. Should acid contact eyes or skin,flush immediately with large quantities of fresh water or baking soda water.

8. Keep open flames away from batteries.

9. When using the battery charger, you must first check the charging instructions on the battery and then receive permission from the teacher.

10. Before connecting or disconnecting the battery from the charger, always turn the switch OFF.

11. The power must be shut off when checking a battery for charge.

BREATHING HAZARDS

1. Internal combustion engines must not be run in a closed area unless vented to the outside.

2. Avoid breathing carbon monoxide fumes. These fumes are oderless, colorless,tasteless, and deadly poison.

3. First Aid: If a person has inhaled too much carbon monoxide,his skin will start to darken. If this occurs get the person to open air immediately, open his clothing, and apply artificial respiration if necessary. In advanced stages, the skin will be black.

BURNS

1. Keep clear of hot exhaust manifolds.

2. Severe burns can result from wearing metal rings,bracelets,chains or metal watch bands while working on electrical circuits. Remove all jewelery of this type when working with electrical circuits.

3. Keep hands away from battery acid. . . it will burn.

4. Do not pick up drill bits with bare hands after heavy cutting, allow them to cool.

cool

fan

hoses

107

The part that pumps the water through the cooling system is the _____ _____.

The water is cooled as it goes through the _____.

INSTRUCTIONAL SHEET #4

5. Be careful about handling metal in a welding area, it could be hot.

6. Do not leave hot metal unattended.

7. Report all burns to the teacher immediately.

CLOTHING

1. Wear tight-fitting coveralls or other appropriate clothing. It is dangerous to wear loose clothing around machinery.

2. Coveralls should be cleaned periodically keeping them free of accumulated oil and grease.

CRANKING

1. When cranking a motor with crank or starter, be certain that all persons and materials are clear of turning parts.

2. When cranking an engine, be prepared for an emergency. If trouble develops, turn the ignition switch off immediately.

CREEPERS

1. Creepers are not playthings! Playing with them will not be tolerated.

2. Creepers should not be left on the floor where they may cause someone to fall. Stand the creepers up.

ELECTRIC HAND DRILL

1. When the hand drill is being used, hold it straight and steady.

2. After inserting or removing a drill from the chuck of the drill, the chuck key must be removed.

3. The electric drill and its cord must not be allowed to get wet.

ELECTRIC EQUIPMENT

1. All electrical equipment must be on a 3-wire grounded circuit.

2. Any cut or frayed insulation should be reported to the teacher at once.

3. If an unusual flash occurs while plugging in equipment, notify the teacher immediately.

108

INFORMATION

Modern antifreezes can be left in the cooling system for the whole year. Antifreeze keeps water from freezing during the winter. Antifreeze will also keep the cooling system cooler during the hot weather.

THIS IS THE END OF BOOK 8

18042

AUTO MECHANICS COURSE

POST-TEST BOOK 8: THE COOLING SYSTEM

A BASIC SYSTEMS PROGRAM

18042

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

Antifreeze is used in a cooling system:

- ☐ instead of water
- ☐ to do away with the need for water
- ☐ to be mixed with water

2

NAME the part that moves water through the cooling system. _____

3

A car comes into your service station and its engine is overheating. If a fan belt ripped, which part stopped turning?

- ☐ fan
- ☐ radiator
- ☐ thermostat

4

It is winter and a customer complains that it takes too long for his engine to warm up. Which of the following is a possible reason?

- ☐ The radiator is full.
- ☐ The thermostat is staying open.
- ☐ The water pump is working.

5

It is summer and a customer comes into your service station. Water is leaking because the hose on top of the engine is not properly connected. You will connect it to the:

- ☐ fan
- ☐ radiator
- ☐ thermostat
- ☐ water pump

6

The water jacket is used to:

- ☐ keep the water from getting cold
- ☐ keep the water from getting hot
- ☐ get the water to cold spots in the engine
- ☐ get the water to hot spots in the engine

7

Water in the cooling system cools off when it is in the _____.

8

In order to get water going back and forth in the cooling system, which part must be working?

- ☐ water jacket
- ☐ water pump
- ☐ water reserve

9

Water or antifreeze is poured directly into the:

- ☐ fan
- ☐ radiator
- ☐ water jacket
- ☐ water pump

10

The thermostat will:

- ☐ close if the engine is too cold
- ☐ push water through the cooling system
- ☐ open if the engine is too cold
- ☐ pull water through the cooling system

11

An engine has a water jacket in it to:

- ☐ get water out of the cooling system
- ☐ get water away from the hot spots in the engine
- ☐ get water to hot spots in the engine
- ☐ keep the water from getting cold

12

Water enters the engine through the _____ hose and returns to the engine through the _____ hose.

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on the exhaust system was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

INSTRUCTIONAL SHEET #5

4. Electrical cords lying on the floor should not be run over. A break might be caused in the insulation making a faulty circuit.

5. When operating electrical equipment be sure you are on a dry surface and that the equipment is not wet.

6. Never turn a switch "on" or "off" without knowing what is at the other end of the circuit.

ELECTRICAL SHOCKS

1. Treat any wire as if it were"hot."

2. If a slight shock is received while operating any piece of equipment, notify the teacher immdiately. -DO NOT CONTINUE TO OPERATE THE MACHINE.

3. Wearing of metal rings,bracelets, or chains while working on or near an electrical circuit is forbidden.

4. Circuits should not be checked with the fingers to see if they are "hot."

ENGINES

1. Before starting any engine, always obtain the teacher's permission.

2. When working on or around live engines in the shop,excise extreme care when making any adjustments on a running engine(tappet,carburetor, timing,etc.)

3. It is dangerous to work around running belts, gears,etc. Keep your hands clear!

4. If you are not directly involved in the operation of any engine, KEEP CLEAR AND DO NOT TALK TO THE OPERATOR.

FIRES

1. Gasoline should NEVER be used as a cleaning agent.

2. Keep all oily and gasoline soaked rags in a fireproof container.

3. Learn the location and use of all fire extinguishers.

4. When starting or operating an automotive engine, a fire extinguisher must be readily accessable.

KEEP GOING

Pre Test

1

The part of the exhaust system that is mounted on the engine is called the _____ _____ .

2

The part that quiets engine noise is called the _____ .

3

The exhaust system takes _____ and _____ away from the car.

4

The exhaust manifold is connected to the engine and to the _____ _____ .

5

What part of the exhaust system is the tailpipe connected to?

_____

18052

6

Which part of the exhaust system is between the exhaust pipe and the tailpipe? _____

7-10

NAME the part each arrow points to:

7: _____

8: _____

9: _____

10: _____

18053

1

Automobiles use a mixture of _____ and _____ for fuel.

18054

1

air

gasoline

2

The air-gasoline mixture is exploded when it is sparked by the _____ _____ .

18055

2

spark plugs

3

An explosion makes: (CHECK TWO)

- ☐ noise
- ☐ no noise
- ☐ smoke
- ☐ no smoke

18056

3

noise

smoke

4

Smoke and noise are made when there are explosions in an automobile's _____ .

18057

4

engine

5

Smoky, noisy engines are dangerous and annoying to drivers.

For the drivers' comfort and safety, noise and smoke should be:

- ☐ kept in the car
- ☐ left alone
- ☐ taken out of the car

18058

5

taken out of the car

6

The parts of an automobile that quiet engine noise belong to the EXHAUST SYSTEM.

The exhaust system also takes _____ out of the car.

18059

6

smoke

7

Noise and smoke are taken out of the engine by the:

- ☐ cooling system
- ☐ exhaust system
- ☐ fuel system

18060

7

exhaust system

8

What does the exhaust system do? (CHECK ALL CORRECT ANSWERS)

- ☐ feeds gasoline to the engine
- ☐ quiets the engine
- ☐ takes burned gas fumes out of the car

18061

INSTRUCTIONAL SHEET #6

GRINDER AND BUFFER

1. Goggles or a face shield must be worn when grinding or buffing. Keep the glass clean.

2. The tool rest on the grinder should be 1/8" from the grinding wheel. Excessive clearance permits work to jam between the wheel and tool rest.

3. Be sure that the tool rest is secure and tight.

4. Always turn the grinder off before leaving it.

5. Excessive pressure against the grinding wheel causes overheating of the work and may cause breakage of the wheel.

6. Be careful of fingers when using the buffer or wire wheel.

7. Keep the grinder running at full motor speed. Avoid slowing the wheel by use of excessive pressure.

8. Small pieces of metal must not be ground on a grinding wheel.

9. When starting the grinder, do not stand in line with the wheel.

10. Stand to one side while grinding.

11. Allow no one to watch who is not wearing goggles or a face shield.

12. Grinding wheels that do not run true must not be used.

13. The work should always be held below center and to the front of the buffing wheel.

HOIST CHAIN

1. Stand clear of any weight being lifted with a chain hoist.

2. The hoist or lifting device should never be overloaded, know the capacity of the hoist and use it wisely.

3. Working under an engine or car held up by a hoist is forbidden.

4. After lifting, block the car and take the weight off of the hoist.

5. Lift straight up. Do not pull the chain to one side. This may cause the load to shift.

6. Do not play with the chain hoist.

THIS IS THE END OF BOOK 9

18081

7. When through using the chain hoist, put it away.

HAND TOOLS

1. Always use the correct size and type of tool for the job.
2. Do not carry sharp tools in your pockets.
3. A slipping wrench may cause a serious injury; therefore,never use a wrench with cracked or worn jaws.
4. Hammer, mallet, or sledge heads should be kept tight on their handles.
5. Cracked handles must be replaced.
6. Mushroom ends on chisels and punches must be ground off before using.
7. Chisels will not be used for screwdrivers and screwdrivers will not be used for chisels.
8. When using a chisel, you should hold the work in a vise or clamp.
9. A ratchet handle is not to be used as a hammer.
10. When additional leverage is needed to loosen a nut, use a bigger tool. Do not add an extension to the handle for more leverage.
11. When using a screwdriver on small objects, the object must be held in a vise or clamp.
12. Keep screwdrivers out of your pockets.
13. Hammers should not be hit together.
14. Never use a file without a handle.
15. Never use a file for a pry bar.
16. Do not hit a file with a hammer.
17. Return all broken or damaged tools to the teacher.
18. Hardened material must never be struck with a hard-surface hammer.
19. Vise handles and control knobs are to be tightened by hand.

HYDRAULIC FLOOR JACKS

1. Do not use a jack if there is any doubt about its safe operation.

NO ANSWER NEEDED

10

LOOK AT PANEL 1

The panel shows a picture of the exhaust system.

Every part is labeled.

How many parts are there in the exhaust system? _____

10

4

11

LOOK AT PANEL 1

Noise and smoke are produced by explosions in the

_____.

The part of the exhaust system connected to the engine is called the _____ _____.

18085

11

engine

exhaust manifold

12

Exhaust smoke is called "exhaust fumes."

Exhaust fumes leave the car through the back part of the exhaust system.

The exhaust fumes go out through the part called the _____ .

12

tailpipe

13

The back part of the exhaust system is called the tailpipe because a tail is always at the:

- ☐ front
- ☐ back

18087

13

back

14

LOOK AT PANEL 1

Before exhaust fumes can excape through the tailpipe, they must first pass through the exhaust manifold, the exhaust pipe and the _____.

18088

14

muffler

15

LOOK AT PANEL 1

The part that connects the exhaust manifold to the muffler is called the _____ _____ .

15

exhaust pipe

16

LOOK AT PANEL 1

The two pipes connected to the muffler are called the:

INSTRUCTIONAL SHEET #8

2. Do not work under any car or object supported by a jack alone. Use axle stands for safety.

3. When the floor jacks are not being used,they should be placed out of the way where no one will fall over them.

4. Never lift or lower a car or object if someone is working underneath.

LIFTING HEAVY OBJECTS

1. When lifting any object, be sure to grasp it firmly so it will not fall and hit your feet.

2. Lift with your legs and not your back.

3. Keep your back as nearly vertical as possible while lifting

4. Use assistance for lifting a heavy object. Lifting objects which are too heavy can cause serious injury.

TIRES

1. Inflate tires only to recommended pressure.

2. If gauge appears to be faulty, notify the teacher.

3. Avoid looking directly at a tire or valve while inflating. A blast of air could blind you.

4. Stand as far to one side as possible when putting air in tires and protect face with fender in case the tire blows.

IF YOU ARE READY FOR FINAL TEST SEE THE INSTRUCTOR-

REMEMBER - YOU MUST SCORE 100% - BE CERTAIN THAT YOU ARE WELL PREPARED.

28

to take noise and exhaust fumes
out of the engine

29

After engine noise and exhaust fumes have passed through the exhaust manifold, they enter a pipe called the _____ .

29

exhaust pipe

30

Engine noise and exhaust fumes enter the exhaust pipe from the

_____ _____

18104

30

exhaust manifold

31

NAME two things that enter the exhaust pipe from the exhaust manifold.

_____

_____

31

noise

exhaust fumes

32

Noise and exhaust fumes enter the exhaust pipe directly from the:

- ☐ engine
- ☐ exhaust manifold
- ☐ tailpipe

18106

32

exhaust manifold

33

Exhaust fumes and noise are made in the _____ .

The first part of the exhaust system that they enter is called the _____ _____ .

33

engine

exhaust manifold

34

The exhaust manifold gives noise and smoke directly to the

_____ _____ .

34

exhaust pipe

35

When noise and smoke leave the exhaust pipe on their trip to the back of the car, they then enter a part called the _____ .

35

muffler

36

The muffler gets noise anu smoke directly from the:

- ☐ engine
- ☐ exhaust manifold
- ☐ exhaust pipe

18110

36

exhaust pipe

37

NAME two things that enter the muffler directly from the exhaust pipe.

_____

_____

37

noise

exhaust fumes

38

The job of the exhaust pipe is to carry noise and exhaust fumes from the _____ _____ to the muffler.

muffler

43

NAME the part the arrow points to.

_____

43

exhaust pipe

44

What does the exhaust pipe do? _____

44

gets noise and exhaust fumes from the exhaust manifold to the muffler

45

MATCH the following:

A. engine

B. exhaust manifold

C. exhaust pipe

1. _____ gets noise and exhaust fumes from the engine

2. _____ gets noise and exhaust fumes into the muffler

3. _____ makes noise and exhaust fumes

45

1. B

2. C

3. A

46

The part between the exhaust pipe and the tailpipe is called the _____ .

46

muffler

47

The muffler gets noise and exhaust fumes from the

_____.

47

exhaust pipe

48

After noise has gone through the muffler, it is not as loud as it was when it entered.

Therefore, the muffler:

- ☐ increases noise
- ☐ decreases noise
- ☐ maintains same amount of noise

ABSTRACT - Developed with Elementary and Secondary Education Act (ESEA) Title III funds, this learning activity package teaches certain geometrical constructions needed in drafting. Designed as a self-instructional unit for high school students, it contains: (1) rationale, (2) geometric applications, (3) primary ideas, (4) student objectives, (5) pretest terms, (6) key to pretest terms, (7) pretest drawing, (8) required and optional activities, (9) instructions following completion of activities, and (10) 12 drawings. A bibliography is included. (GR)

VT 011 498

48

decreases noise

49

Since noise from the engine is decreased inside the muffler, you hear less noise:

- ☐ before it goes into the muffler
- ☐ after it comes out of the muffler

49

after it comes out of the muffler

50

The job of the muffler is to:

- ☐ increase engine noise
- ☐ decrease engine noise
- ☐ maintain the same amount of engine noise

18124

50

decrease engine noise

51

The part that quiets engine noise is called the _____ .

18125

51

muffler

52

The part that has less engine noise going through it is the:

- ☐ exhaust pipe
- ☐ tailpipe

because it comes:

- ☐ after the muffler
- ☐ before the muffler

18126

52

tailpipe

after the muffler

53

Noise is louder when it:

- ☐ enters the muffler
- ☐ leaves the muffler

18127

post Test page 1 Book 4

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

The part of the exhaust system that is connected to the engine is called the _____ _____.

2

Exhaust fumes leave the exhaust system at the back of the car through the _____ _____.

3

Engine noise is quieted by the _____.

4

The tailpipe is connected to a part of the exhaust system called the _____.

5

NAME the part that builds up the driver's force on the steering wheel: _____

6

What part of the steering system does the driver turn? _____

7

The steering column connects the steering wheel to the _____ _____ assembly.

8

The idler arm is connected to the center link and to the _____.

9

The steering gear arm, the idler arm and the _____ _____ are connected to the center link.

10

What part of the steering system moves the front wheels? _____

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on the power transmission system was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

Book 10

1

The drive wheels of a car are the:

- ☐ front wheels
- ☐ rear wheels

2

Power reaches the drive wheels from the _____ _____.

3

Power reaches the differential assembly through the _____ _____.

4

The part of the power transmission assembly between the clutch assembly and the drive shaft is called the _____ _____ assembly.

5

The muffler and the exhaust manifold are connected by the _____ _____.

6

Two pipes connected to the muffler are the:

_____

_____

7-10

NAME the part each number points to:

7: _____

8: _____

9: _____

10: _____

18138

1

This section of the program will teach you how power gets from the engine to the wheels.

This part will answer the question:

- ☐ What steers the front wheels?
- ☐ What starts the engine?
- ☐ What makes the wheels turn?

18139

1

What makes the wheels turn?

2

A horse and wagon are shown in the drawing.

Where does the power come from?

- ☐ the wheels
- ☐ the wagon
- ☐ the horse

18140

2

the horse

3

A car has power in the engine (think of "horsepower").

The arrows show that the car moves because:

- ☐ power turns the rear wheels
- ☐ the front wheels make their own power
- ☐ energy comes from the road

18141

3

power turns the rear wheels

4

A horse pulls a wagon.

The drawing shows that a car moves because the rear wheels _____ the car.

18142

4

push

5

The rear wheels push a car because they:

- ☐ are larger than the front wheels
- ☐ stick to the road
- ☐ get power from the engine

get power from the engine

6

The power transmission system of a car sends power from the engine to the rear wheels.

The words that best describe transmission are:

- ☐ battery — power — rear wheels
- ☐ engine — power — rear wheels
- ☐ starter — battery — engine

6

engine — power — rear wheels

7

The rear wheels on a car get power from the:

- ☐ starter
- ☐ road
- ☐ engine

18145

7

engine

8

The drawing shows a "homemade" car.

The CHAIN carries power from the engine to the rear w _____ .

18145

8

wheels

9

The drawing shows a simple "homemade" car.

CIRCLE the part below that transmits (carries) power to the rear wheels:

chain engine wheel

DS147

9

chain

10

The parts of a car that carry or transmit power from one place to another – just like a chain – are called the POWER TRANSMISSION SYSTEM.

The power transmission system:

- ☐ sends power from the gas tank to the gas pedal
- ☐ stops the engine power
- ☐ sends power from the engine to the rear wheels to turn the rear wheels

18140

10

sends power from the engine to the rear wheels to turn the rear wheels

11

Which system connects the engine to the rear wheels?

- ☐ exhaust system
- ☐ power transmission system
- ☐ steering system

18149

11

power transmission system

12

PICK UP THE PANEL BOOK

FIND PANEL 1

THEN TURN THIS PAGE AND GO ON

12

NO ANSWER NEEDED

13

The rear wheels on a car are called the DRIVE WHEELS.

Do the drive wheels steer the car? ☐ yes ☐ no

Do the drive wheels move the car? ☐ yes ☐ no

18151

13

no

yes

14

LOOK AT PANEL 1

CIRCLE the location of the drive wheels on a car:

front of the car

beside the steering wheel

around the drive shaft

back of the car

18152

14

back of the car

15

LOOK AT PANEL 1

The rear wheels are called:

- ☐ steering wheels
- ☐ drive wheels
- ☐ shaft wheels

18153

TOPIC	PAGE
Ellipse	G-7
Arcs	G-8
Conveyer Link	G-9
Gasket	G-10
Cushioning Base	G-11
Bibliography	16

15

drive wheels

16

You can see from the drawing that the power transmission system parts are located:

- ☐ in the front of the car
- ☐ in the middle and the rear of the car
- ☐ only between the drive wheels

18154

16

in the middle and the rear of the car

17

All the parts of the power transmission system are labeled.

The engine is at one end of the power transmission system, and the drive wheels are at the other end.

NAME the power transmission system parts that are between the engine and the drive wheels:

1. _____

2. _____

3. _____

4. _____

18155

17

clutch assembly

transmission gear assembly

drive shaft

differential assembly

18

What job do the power transmission system parts do?

- ☐ send power from the engine to the drive wheels
- ☐ stop the wheels from turning
- ☐ carry power from the drive wheels to the engine

18156

18

send power from the engine to the drive wheels

19

The power transmission system sends power from the engine to both drive wheels.

Which drawing above shows the complete flow of power through the power transmission system?

☐ A

☐ B

18157

19

B

20

The first part of the power transmission system is the CLUTCH ASSEMBLY.

The clutch assembly gets power directly from the:

- ☐ drive shaft
- ☐ transmission gear assembly
- ☐ engine

18158

20

engine

21

LOOK AT PANEL 1

The engine makes the power in a car.

After the power is made in the engine it goes directly to the:

- ☐ drive shaft
- ☐ clutch assembly
- ☐ differential assembly

18159

21

clutch assembly

22

The drawing shows how the inside of the clutch assembly looks when the driver steps on the clutch pedal.

You can see that the clutch has:

- ☐ one main bearing that powers the engine
- ☐ four contact points
- ☐ two plates that go together and come apart

18160

22

two plates that go together and come apart

23

LOOK AT PANEL 1

The second part of the power transmission system is the TRANSMISSION GEAR ASSEMBLY.

Power goes to the transmission gear assembly directly from the:

- ☐ rear wheels
- ☐ clutch assembly
- ☐ drive shaft

18161

23

clutch assembly

24

One end of the clutch assembly is bolted onto the engine.

What is the other end attached to?

- ☐ crankshaft
- ☐ transmission gear assembly
- ☐ rear axle

18162

24

transmission gear assembly

25

The arrow points to the:

- ☐ engine
- ☐ clutch assembly
- ☐ transmission gear assembly

18163

25

transmission gear assembly

26

CIRCLE one drawing below that looks like a clutch assembly and transmission gear assembly unit:

18164

26

27

LOOK AT PANEL 1

After power has traveled through the clutch assembly, it goes directly to the:

- ☐ rear axle
- ☐ drive shaft
- ☐ transmission gear assembly

18165

27

transmission gear assembly

28

LOOK AT PANEL 1

The third part of the power transmission system (and the longest part) is the DRIVE SHAFT.

CROSS OUT the drawing below that shows what the drive shaft looks like:

A B

28

B

29

The drawing above shows that the drive shaft is connected to one side of the transmission gear assembly.

The part connected to the other side of the gears is the c_____ a_____.

29

clutch assembly

30

LOOK AT PANEL 1

The transmission gear assembly is connected to two parts.

What are the names of these parts? (CHECK TWO)

- ☐ the clutch assembly
- ☐ the differential assembly
- ☐ the engine
- ☐ the drive shaft

30

the clutch assembly

the drive shaft

31

You can see from the drawing that the drive shaft is a long straight part that extends back to the:

- ☐ end of the tailpipe
- ☐ middle of the car
- ☐ part between the drive wheels

18169

31

part between the drive wheels

32

The part located between the rear axles is called the DIFFERENTIAL ASSEMBLY.

The differential assembly is connected to the:

- ☐ drive shaft
- ☐ transmission gear assembly
- ☐ drive wheels

18170

32

drive shaft

33

The transmission gear assembly is attached to one end of the **drive shaft.**

What part is connected to the other end of the drive shaft?

- ☐ the differential assembly
- ☐ the drive wheels
- ☐ the rear axles

33

the differential assembly

34

LOOK AT PANEL 1

The differential assembly is located:

- ☐ between the rear wheels
- ☐ exactly in the middle of the drive shaft
- ☐ on the drive shaft near the engine

The drawing shows that the turning parts are the axles and the:

- ☐ drive wheels
- ☐ axle housing
- ☐ differential housing

52

drive wheels

53

The axle housing protects the rear axles. It does not turn.

The turning axles are located:

- ☐ around the drive shaft
- ☐ inside the axle housing
- ☐ inside the wheels

53

inside the axle housing

54

A

B

Which of the two drawings shows the working (moving) parts of a differential assembly?

- ☐ A
- ☐ B

18192

PRIMARY IDEA - GEOMETRIC CONSTRUCTION

STUDENT OBJECTIVES

The following terms relate to Geometrical Construction. Given a symbol, drawing, or term, you will be able to explain through an oral or written statement, and by drawing an illustration or symbol, the following:

Vertex of an Angle	Angle
Hypotenuse	Cube
Quadrant of Circle	Prism
Sector of Circle	Cylinder
Segment of Circle	Pyramid
Concentric Circles	Cone
Eccentric Circles	Sphere
Semi-Circle	Parallelogram
Center Line	Ellipse
Construction Line	Polygon
Isosceles Triangle	Major Axis
Scalene Triangle	Minor Axis
Perpendicular	Cord
Tangent-Point	Arc

54

B

55

Like the axles, the differential assembly has moving parts inside a housing.

The differential assembly housing:

- ☐ turns with the gears
- ☐ protects the gears
- ☐ steers the front wheels

55

protects the gears

56

PICK UP THE PANEL BOOK

FIND PANEL 1

THEN TURN THIS PAGE AND GO ON

18194

56

NO ANSWER NEEDED

57

LOOK AT PANEL 1

16

In the panel drawing, you can see:

- ☐ the moving parts of the axles and differential assembly
- ☐ the housings for the axles and differential assembly
- ☐ all the parts of the differential assembly

18195

57

all the parts of the differential assembly

58

LOOK AT PANEL 1

The parts labeled in the panel drawing are all:

- ☐ important for the safety of the driver
- ☐ parts of the power transmission system
- ☐ parts that make the car stop quickly

58

parts of the power transmission system

59

CLOSE THE PANEL BOOK

THEN TURN THIS PAGE AND GO ON

18197

59

NO ANSWER NEEDED

60

The differential gear assembly is between the:

- ☐ drive shaft
- ☐ front axle
- ☐ two rear axles

18198

60

two rear axles

61

The drawing shows that the parts of the differential assembly send turning power:

- ☐ only to the left drive wheel
- ☐ only to the right drive wheel
- ☐ to both drive wheels

18199

61

to both drive wheels

62

IDENTIFY the parts that each arrow points to:

Arrow A: _____

Arrow B: _____

Arrow C: _____

18200

62

drive wheels

rear axles

differential assembly

63

The drawing shows that the drive shaft:

- ☐ never moves
- ☐ is a part that can turn
- ☐ is supported by three mounts

18201

63

is a part that can turn

64

Arrow A points to:

- ☐ the drive shaft
- ☐ the drive wheels
- ☐ the transmission gear assembly

The striped part in the diagram is the:

- ☐ clutch assembly
- ☐ drive shaft
- ☐ transmission gear assembly

18202

STUDENT OBJECTIVES

Given a selected set of activities, the student will develop an ability to understand and accurately perform the following:

1. Divide lines and angles into segments.
2. Draw a tangent from a point outside a circle to a circle and show construction for points of tangency.
3. Draw an arc of designated radius tangent to a given line and an arc showing points of tangency.
4. Draw an arc of designated radius to two given lines showing construction for points of tangency.
5. Draw an arc of designated radius tangent to two given arcs showing the construction for the points of tangency.
6. Draw a circle through 3 predetermined points.
7. Draw an ogee curve connecting two given points and passing through a third.
8. Given a line segment, construct a right triangle whose sides have given proportions.
9. Erect a perpendicular to a line from a point outside a line.
10. Erect a perpendicular at a point on a line.
11. Draw hexagons, octagons, and pentagons.
12. Reduce a figure by triangulation.
13. Draw an arc of designated radius tangent to the arc of another radius.
14. Draw an exterior common tangent to two circles.
15. Draw an interior common tangent to two circles.
16. Draw various types of an ellipse.
17. Draw selected objects using the geometric construction you have learned.

64

the drive shaft

transmission gear assembly

65

The drive wheels can move the car only if the:

- ☐ brake shoes are turning
- ☐ drive shaft is turning
- ☐ rear springs are turning

18203

65

drive shaft is turning

66

The drive shaft turns the:

- ☐ front wheels
- ☐ differential assembly
- ☐ steering wheel

18204

66

differential assembly

67

Transmission turning power goes from the drive shaft to the

(☐ transmission gear assembly ☐ differential assembly)

and then to the rear axles.

18205

67

differential assembly

68

CROSS OUT the parts listed below that do <u>not</u> belong to the power transmission system:

drive shaft

camshaft

differential assembly

front axle

rear axles

68

~~camshaft~~

~~frontaxle~~

69

Next to each part name, WRITE the number of the arrow that points to it in the picture:

differential gear assembly _____

rear axles _____

18207

69

2

1

70

WRITE the missing part names in the boxes below:

18208

70

1. drive shaft
2. differential assembly
3. rear axles

71

TRANSMISSION GEAR ASSEMBLY

The drive shaft is connected to the transmission gear assembly.

What part is between the transmission gear assembly and the engine? _____

18209

71

clutch assembly

72

The transmission part shown in detail above is the:

- ☐ transmission gear assembly
- ☐ drive shaft
- ☐ rear axles

18210

72

transmission gear assembly

73

You can see from the drawing that the transmission gear assembly is connected to the clutch assembly and the:

- ☐ differential assembly
- ☐ drive shaft
- ☐ drive wheels

18211

73

drive shaft

74

Part A is called the t_____ g_____
a_____.

18212

IF YOU THINK YOU CAN MEET THESE OBJECTIVES TURN TO PAGE 6 FOR THE PRE-TEST.

IF YOU DO NOT THINK YOU CAN MEET THESE OBJECTIVES TURN TO PAGE 13 AND BEGIN THE ACTIVITIES.

74

transmission gear assembly

75

The clutch assembly is between the engine and the transmission gear assembly.

Turning power goes to the transmission gear assembly directly from the:

- ☐ clutch assembly
- ☐ drive shaft
- ☐ front wheels

75

clutch assembly

76

The correct order of power transmission from the engine is:

- ☐ clutch assembly ⟶ transmission gear assembly ⟶ drive shaft
- ☐ clutch assembly ⟶ drive wheels ⟶ transmission gear assembly
- ☐ clutch assembly ⟶ transmission gear assembly ⟶ rear axles

18214

76

clutch assembly → transmission gear assembly → drive shaft

77

What does the arrow point to?

- ☐ the clutch assembly
- ☐ the differential assembly
- ☐ the transmission gear assembly
- ☐ the rear axles

77

the clutch assembly

78

WRITE the missing part names in the boxes below:

18216

78

1. transmission gear assembly
2. clutch assembly

79

Power goes to the drive wheels directly from the:

- ☐ drive shaft
- ☐ rear axles
- ☐ differential assembly

79

rear axles

80

Next to each part name, WRITE the number that identifies it in the picture:

drive shaft _____

drive wheels _____

rear axles _____

85

NO ANSWER NEEDED

86

LOOK AT PANEL 2

NAME the parts power travels through when it goes from the engine to the drive wheels:

A. engine

B. _____ _____

C. _____ _____

D. _____ _____

E. _____ _____

F. _____ _____

G. drive wheels

86

B. clutch assembly

C. transmission gear assembly

D. drive shaft

E. differential assembly

F. rear axles

87

CLOSE THE PANEL BOOK

THEN TURN THIS PAGE AND GO ON

87

NO ANSWER NEEDED

88

When a car goes over a bump, the rear wheels go up and down.

If the drive shaft could not move with the rear wheels, it would probably:

- ☐ be all right
- ☐ break

89

goes up

90

The UNIVERSAL JOINTS allow the drive shaft to move up and down.

If a car did not have universal joints the drive shaft would:

- ☐ be all right
- ☐ break

18228

90

break

91

There is a universal joint:

- ☐ only at the back of the drive shaft
- ☐ only at the front of the drive shaft
- ☐ at both the back and the front of the drive shaft

91

at both the back and the front of the driver shaft

92

CROSS OUT the universal joints below:

18230

92

93

What do the arrows point to? _____ _____

18231

93

universal joints

94

The universal joint:

- ☐ corrects the drive shaft
- ☐ lets the drive shaft move up and down
- ☐ transmits brake power to the drive wheels

18232

PRE-TEST (con't)

16. Cylinder

17. Cone

18. Parallelogram

19. Ellipse

20. Cord

21. Tangent Point

22. Arc

Check your answers with the key. (pages 8,9,10) Correct all answers and bring your pre-test to the instructor.

If you wish to continue with the Pre-Test, turn to page 11.

IF YOU DO NOT WISH TO CONTINUE THE PRE-TEST, TURN TO PAGE 13 AND START THE ACTIVITIES.

94

lets the drive shaft move up and down

95

Which part lets the drive shaft move up and down?

- ☐ the drive shaft mover
- ☐ the drive joint
- ☐ the universal joint

18233

95

the universal joint

96

What is the job of the universal joint? _____

18234

96

to let the drive shaft move up and down

97

CAR ON LEVEL

SAME CAR ON BUMP

When a car goes over a bump which part gets shorter?

- ☐ the drive shaft
- ☐ the drive wheels
- ☐ the transmission gear assembly

18235

97

the drive shaft

98

When a car goes over a bump the drive shaft:

- ☐ stays the same
- ☐ slides a bit and looks a little longer
- ☐ slides a bit and looks a little shorter

98

slides a bit and looks a little longer

99

The part that lets the drive shaft slide is called the SLIP JOINT.

The slip joint is located at the front of the drive shaft and goes into the t_____ g_____ a_____.

18237

99

transmission gear assembly

100

A special part at the front of the drive shaft lets the drive shaft get longer or shorter.

What is it called? _____ _____

100

slip joint

101

The SLIP JOINT lets the drive shaft:

- ☐ fall apart
- ☐ slide a bit in the transmission gear assembly
- ☐ move up and down as the car is moving

18239

101

slide a bit in the transmission gear assembly

102

What does the arrow point to? _____

18240

102

slip joint

103

CIRCLE the slip joint below.

18241

103

104

MATCH the parts with their jobs:

A. slip joint

B. universal joint

1. _____ lets drive shaft slide in or out
2. _____ lets drive shaft move up or down
3. _____ lets drive shaft turn

18242

KEY - PRE - TEST: TERMS, DEFINITIONS AND SYMBOLS

Vertex of an angle - the termination or intersection of the sides of the angle.

Hypotenuse - the side of a right angle triangle that is opposite the right angle.

Quadrant of circle - an arc of 90° that is one quarter of a circle.

Sector of circle - a geometrical figure bounded by two radii and the included arc of a circle.

Segment of circle - the part of a circular area bounded by a chord and an arc of that circle.

Concentric circles - circles having a common center.

Eccentric circle - circles not having the same center.

Semi-circle - half a circle.

Center line - a thin dark line consisting of alternate short and long dashes.

——— - ———

Construction line - a light thin gray line drawn preliminary to the finish object line of a drawing.

Isosceles triangle - a triangle having two sides equal.

AUTO MECHANICS COURSE

POST-TEST BOOK 10: THE POWER TRANSMISSION SYSTEM

A BASIC SYSTEMS PROGRAM

18247

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

The clutch assembly gets power from the _____ .

2

In order for the car to move, which wheels must get power?

_____

3

The drive shaft carries power to the _____ assembly.

4

The transmission gear assembly is between the clutch assembly and the _____ _____ .

5

The rear wheels get power from the _____ _____.

6

NAME the part located at each end of the drive shaft: _____

7

The part that slides to lengthen or shorten the drive shaft is called the _____ _____.

8

Power goes to the rear axles from the _____ assembly.

9

What part of the power transmission system is between the clutch assembly and the drive shaft? _____

10

The differential assembly gets power from the drive shaft and gives it to the _____ _____ .

KEY-PRE-TEST (continued)

Scalene triangle - a triangle having unequal length sides.

Perpendicular - being at right angles to a given line or plane.

Angle - the figure formed by two lines meeting at the same point.

Tetrahedron - a regular solid of four faces.

Cube - a regular solid of six equal square sides.

Prism - a solid with two faces that are polygons in parallel planes and the other faces parallelograms.

Cylinder - a solid bounded by a curved surface and two opposite faces called bases.

Pyramid - a solid whose base is a polygon and whose faces are triangles meeting at a common point.

Cone - a solid, one of whose surfaces tapers to a point and whose base is a closed curve.

Sphere - a solid bounded by a curved surface, every point of which is equally distant from the center.

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on the steering system was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

AUTO MECHANICS COURSE

BOOK 11: THE STEERING SYSTEM

Developed under the Manpower Development and Training Act of 1962 (PL- 87-415), contract No. MDS 24-64 between the Secretary of Labor and Young Men's Christian Association of Greater New York, by Basic Systems Incorporated.

18256

1

The part of the steering system that reduces vibration is called the _____ _____.

2

Each front wheel is mounted onto a _____ _____.

3

What part of the steering system does the driver turn? _____

4

The steering gear arm moves the _____ _____.

5

The parts between the steering knuckle and the center link are called _____ _____.

6

What moves the steering gear assembly? _____ _____

7

The part between the front wheel and the tie rod is called the
_____ _____.

8

NAME the part of the steering system that is connected to the chassis:
_____ _____

9

The center link gets power from the _____ _____ _____.

10

The idler arm is connected to the chassis and to the _____ _____.

Name _____

Date _____

Starting time _____

Finishing time _____

18259

1

This part of the program will teach you about the steering system of an automobile.

You will lear how a car:

- ☐ goes
- ☐ stops
- ☐ turns

18260

1

turns

2

The steering system is made up of the steering wheel, the front wheels and the parts that connect them together.

CHECK the parts that belong to the steering system.

- ☐ back wheels
- ☐ front wheels
- ☐ steering wheel

18261

KEY PRE -TEST (continued)

Parallelogram - a four sided figure whose opposite sides are equal and parallel.

Ellipse - a foreshortened circle, a figure that is formed by cutting a cylinder or cone at any angle other than a right angle to the axis.

Regular Polygon - a figure that has any number of sides all of which are equal.

Major axis - the main straight line about which a body or a geometric figure rotates or may be supposed to rotate. In an ellipse: the largest measurement.

Minor Axis - the secondary straight line about which a body or a geometric figure rotates or may be supposed to rotate. In an ellipse: the smaller measurement of the two axis.

If you have corrected and restudied any answers missed, you are now ready to proceed to the drawing portion of the self test.

Turn the page and continue

2

front wheels

steering wheel

3

The purpose of the steering system is to make the car:

- ☐ go faster or slower
- ☐ start or stop
- ☐ turn or go straight

18262

3

turn or go straight

4

What is operating when the driver turns the steering wheel to the left or right?

- ☐ the cooling system
- ☐ the steering system
- ☐ the valve system

18263

4

the steering system

5

Steering wheel "A" is NOT being turned.

Steering wheel "B" is being turned to the left.

Steering wheel C is being turned to the _____.

18264

5

right

6

Which car is going in the direction that the steering wheel is being turned?

- ☐ car A
- ☐ car B

When the steering wheel turns, this car will turn to the:

- ☐ left
- ☐ right

18265

6

car B

right

7

WRITE the direction (left, right, straight) in which each car's steering wheel is being turned:

car A: _____

car B: _____

car C: _____

18266

7

left

straight

right

8

PICK UP THE PANEL BOOK

FIND PANEL 1

18267

8

NO ANSWER NEEDED

9

LOOK AT PANEL 1

Cars change direction because the front wheels turn to the left or right.

When a driver turns the steering wheel, which parts of the car change the car's direction? _____

18268

9

the front wheels

10

LOOK AT PANEL 1

This diagram shows that the steering wheel is being turned to the:

- ☐ left
- ☐ right

The steering gear assembly moves the center link to the:

- ☐ left
- ☐ right

18269

10

right

left

11

The movement of the center link:

- ☐ does nothing to the tie rods
- ☐ pushes and pulls the tie rods
- ☐ twists and turns the tie rods

18270

11

pushes and pulls the tie rods

12

LOOK AT PANEL 1

When the steering wheel is turned, the tie rods move the two

_____ _____.

18271

PRE-TEST DRAWING

The drawing pre-test consists of plates G-1 and G-10. You may get them from your instructor after you have passed the test on terms.

Do not use the references to complete these drawings.

THIS IS A TEST

STAY IN YOUR SEAT

TALK TO NO ONE

You have 3 periods for the two tests.

When finished, the instructor will grade the plates.

Turn to page 12.

12

steering knuckles

13

LOOK AT PANEL 1

The steering knuckles are connected to the:

- ☐ steering wheel
- ☐ front wheels
- ☐ rear wheels

The movement of the steering knuckles:

- ☐ turns the front wheels to the left or right
- ☐ moves the car to the front or rear

18272

13

front wheels

turns the car to the left or right

14

The steering wheel is being turned.

In which direction will the front wheels turn? _____

18273

14

left .

15

Each front wheel is mounted on a _____ .

18274

15

steering knuckle

16

To make a car turn to the left or right:

- ☐ the driver must move
- ☐ the steering knuckles must move
- ☐ nothing must move

18275

16

the steering knuckles must move

17

The purpose of the steering knuckle is to: (CHECK ALL CORRECT ANSWERS)

- ☐ pull against the wheel
- ☐ push against the wheel
- ☐ bend the front wheel

18276

17

pull against the wheel

push against the wheel

18

CIRCLE the steering knuckle in the drawing below:

18277

18

19

When a turn is being made, the steering knuckles _____ and _____ against the front wheels.

18278

19

pull (and) push

20

What do the steering knuckles pull or push against? _____

18279

20

the front wheels

21

The purpose of the steering knuckles is to change the direction of the car by: (CHECK ALL CORRECT ANSWERS)

- ☐ pulling against
- ☐ pushing against

the car's:

- ☐ front wheels
- ☐ rear wheels

18280

21

pulling against

pushing against

front wheels

22

What is arrow "A" pointing to? _____

What is arrow "B" pointing to? _____

18281

PROCEDURE FOLLOWING SELF-TEST

If you passed the pre-test, with your instructor's permission you may start work on the ORTHOGRAPHIC DRAWING L.A.P. 7.

If you did not pass, turn to page 13 and start the activities listed there.

22

the front wheel

the steering knuckle

23

What do the steering knuckles do to the front wheels? _____

This will change the d_____ the car is going.

18282

23

push or pull against them

direction

24

PICK UP THE PANEL BOOK

FIND PANEL 1

THEN TURN THIS PAGE AND GO ON

24

NO ANSWER NEEDED

25

LOOK AT PANEL 1

What part is each arrow pointing to?

arrow A: _____

arrow B: _____

arrow C: _____

18284

25

front wheel

steering knuckle

tie rod

26

What does the steering knuckle do? _____

18285

26

pushes or pulls the front wheels and makes the wheels turn the car to the left or right

27

front wheel

steering knuckle

tie rod

Using the words above, LABEL the parts in the picture below:

18586

27

28

Each steering knuckle is connected to a _____ _____.

18587

28

tie rod

29

TIE ROD

Which parts do the tie rods push and pull against? _____

How many tie rods does a car have? _____

18588

29

steering knuckles

2

30

To make the front wheel turn to the left or right, the tie rod must push or pull:

- ☐ the knuckle
- ☐ directly on the wheel
- ☐ the steering wheel

18589

30

the knuckle

31

Each steering knuckle is connected to a front wheel and to a:

- ☐ tire iron
- ☐ tie rod
- ☐ tire housing

18590

GEOMETRICAL CONSTRUCTION

A. Required Activities - These activities have been developed to aid you in accomplishing the objectives on page 4. Start these activities by getting plate G-1 from your instructor.

READ

The assignment is on the plate.
The references are:

MD 6 Mechanical Drawing, French & Svensen 6th Ed.

MD 7 Mechanical Drawing, French & Svensen 7th Ed.

USE these references to complete the drawing.

ACCURACY AND NEATNESS are important! When you have finished the plate check it with the overlay. If correct, ask the instructor to grade the plate. If it is satisfactory he will give you the next plate.

Draw the plates in the order listed.

Plate	Title
1. G-2	Segments
2. G-2	Perpendiculars
3. G-3	Octagons-Hexagons
4. G-4	Geometric Problems
5. G-5	Tangents
6. G-5a	Tangents
7. G-6	Arcs and Tangents
8. G-7	Ellipses
9. G-8	Arcs
10. G-9	Conveyer Link

32

49

LOOK AT PANEL 1

When the steering gear arm moves, the car:

- ☐ will turn to the left or right
- ☐ will not turn to the left or right

To make the car turn to the left or right, the steering gear arm must:

- ☐ move the center link
- ☐ move the driver
- ☐ move over

18608

49

will turn to the left or right

move the center link

50

The center link is moved by the _____ .

18609

50

steering gear arm

51

The part that moves the center link is labeled:

- ☐ A
- ☐ B
- ☐ C
- ☐ D

Arrow A is pointing to the:

- ☐ center link
- ☐ front wheel
- ☐ tie rod
- ☐ steering gear arm

18610

51

A

center link

52

The steering gear arm moves the _____ _____.

18611

INSTRUCTIONS FOLLOWING COMPLETION OF ACTIVITIES

You have been learning the basic geometric constructions and using the terms that describe their construction. You have applied these constructions to draw the conveyer link and the optional plates. If your drawings have been correct you should be ready for the teacher test.

REVIEW THE TERMS AND THE PLATES G-1 THROUGH G-9

The teacher test is divided into two parts:

Part 1. Definition of terms.

Part 2. Geometrical constructions.

Get these tests from the instructor.

YOU ARE ALLOWED THREE PERIODS FOR THE TEST

When finished turn them in to the instructor. If the test is satisfactory you will be given permission to start L.A.P. 7.

52

tie rods

steering gear arm

64

When the driver turns the steering wheel, the steering gear arm moves.

The steering gear arm is moved by gears in the:

- ☐ steering gear assembly
- ☐ steering post

18623

64

steering gear assembly

65

The steering wheel is being turned.

The gears in the gearbox will move the:

- ☐ steering gear arm
- ☐ steering wheel

18624

65

steering gear arm

66

The steering gear arm is moved by:

- ☐ gears in the gearbox
- ☐ the steering knuckle
- ☐ the center link

18625

66

gears in the gearbox

67

A driver cannot turn the steering wheel hard enough to move the steering system parts. His force on the steering wheel must be built up in order to move the front wheels.

A driver's force on the steering wheel should:

- ☐ be increased
- ☐ be decreased
- ☐ remain the same

18626

67

be increased

68

A steering gear assembly gives the driver enough force on the steering wheel to make the front wheels turn to the left or right.

A driver's force is built up by the steering _____ _____.

18627

68

gear assembly

69

The steering gear assembly:

- ☐ builds up the driver's force on the steering wheel
- ☐ decreases the driver's force
- ☐ does not change the driver's force

18628

69

builds up the driver's force on the steering wheel

70

DRAW an arrow pointing to the part that builds up the driver's force on the steering wheel:

This part is the _____ _____ _____.

18629

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on front end geometry was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

AUTO MECHANICS COURSE

BOOK 12: FRONT END GEOMETRY

Developed under the Manpower Development and Training Act of 1962 (PL 87-415), contract No. MDS 24-64 between the Secretary of Labor and Young Men's Christian Association of Greater New York, by Basic Systems Incorporated.

1

A front end that needs to be aligned can make tires:

- ☐ wear fast
- ☐ wear evenly
- ☐ wear slowly
- ☐ wear evenly

2

These wheels are:

- ☐ toed-in
- ☐ toed-out

3

Front wheel's camber is changed by tilting the:

- ☐ top of the front wheel to the inside or outside of the car
- ☐ front of the wheels closer together or farther apart
- ☐ top of the front wheels to the front or back of the car

18697

4

Caster adjustments are made by tilting the:

- ☐ top of the front wheel to the inside or outside of the car
- ☐ fronts of the wheels closer together or farther apart
- ☐ tops of the front wheels to the front or back of the car

5

Toe-in is changed to toe-out by tilting the: (CHECK TWO)

- ☐ fronts of the wheels closer together
- ☐ fronts of the wheels further apart
- ☐ tops of the wheels to the outside of the car
- ☐ tops of the wheels to the inside of the car

6

Which of the following pictures show wheels that have positive camber?

A B C

18698

7

Which of the following pictures shows a wheel that has negative caster?

8

To give front wheels positive camber, you should tilt them to look like which of the following sets of wheels?

9

Cars that are not correctly aligned will:

- ☐ make steering easy
- ☐ make steering hard
- ☐ make the car go straight
- ☐ make the car pull to one side of the road

18699

Draw the tangent arcs to complete the figure as shown in the left top corner. MD 7 4.28 Fig. 4.28c

wear out faster

wear out unevenly

10

To repair a car that makes front tires wear out quickly and unevenly., you must:

- ☐ adjust the front end
- ☐ adjust the rear end
- ☐ remove the front end
- ☐ remove the rear end

18710

10

adjust the front end

11

When the front end of a car is not properly adjusted, the car will be hard to steer and will pull to one side.

Which car has a correctly adjusted front end?

- ☐ car A
- ☐ car B

18711

11

car A

12

A car may pull to one side or be hard to steer for the same reason that will cause:

- ☐ even tire wear
- ☐ uneven tire wear
- ☐ wasted tire wear

12

uneven tire wear

13

Car B is pulling to one side because the front end:

- ☐ is correctly adjusted
- ☐ has no adjustment
- ☐ is not correctly adjusted

18713

13

is not correctly adjusted

14

Adjustments made to the front end of a car are called FRONT END ALIGNMENT.

Which car needs a front end alignment?

- ☐ car A
- ☐ car B

18714

14

car B

15

Adjustments made to the front end are called:

- ☐ alignments
- ☐ alliances
- ☐ changes

18715

15

alignments

16

What causes tires to wear unevenly?

- ☐ correct alignment
- ☐ no alignment
- ☐ poor alignment

18716

16

poor alignment

17

A car's front end is not correctly aligned.

What will happen to the car? (CHECK TWO)

- ☐ The tires will wear evenly.
- ☐ The tires will wear fast.
- ☐ The tires will wear slowly.
- ☐ The tires will wear unevenly.

18717

18

make it go straight

make steering easy

19

A B

Which front tire is tilted to one side?

- ☐ tire A
- ☐ tire B

Which tire will probably wear evenly?

- ☐ tire A

22

23

To correct a car that does this (see arrow A above) to the tires, you should:

- ☐ adjust the brake system
- ☐ align the front end
- ☐ avoid all changes in the front end

18723

23

align the front end

24

Alignment means:

- ☐ adjusting the front end
- ☐ leaving the front end alone
- ☐ looking over the front end

18724

24

adjusting the front end

25

Aside from wearing tires unevenly, what else does a poorly aligned front end do?

- ☐ makes the car go straight
- ☐ makes the car pull to one side
- ☐ makes steering easy
- ☐ makes steering hard

18725

25

makes the car pull to one side

makes steering hard

26

A

B

Which car will be hard to steer?

- ☐ car A
- ☐ car B

Which car will wear tires unevenly?

- ☐ car A
- ☐ car B

18726

26

car B

car B

27

A

B

Which car did the tire come from?

- ☐ car A
- ☐ car B

18727

27

car B

28

Which tires will wear out faster?

- ☐ tire A
- ☐ tire B
- ☐ tire C

This can be corrected by_____.

18728

28

tire B

tire C

alignment

29

Front ends are aligned by tilting the front wheels in different ways.

Which wheels should be tilted to get good alignment?

- ☐ wheel A
- ☐ wheel B
- ☐ wheel C

18729

PLATE G- 11 Cushioning Base

MD 6 Prob. A.11 P. 368

MD 7 Prob. 2.12 P. 406

1. Follow the instructions in the text.
2. The order of drawing the lines is very important.
3. Use standard plate layout.
4. Locate all tangent points.
5. Leave all construction lines.

YOU HAVE HAD ALL THE CONSTRUCTIONS NECESSARY TO COMPLETE THIS PLATE.

Check with the overlay when finished then call the instructor.

29

wheel B

wheel C

30

The pictures show the different ways in which front wheels can be tilted to get correct alignment.

How many different kinds of alignments are shown? _____

18730

30

5

31

POSITIVE CAMBER

NEGATIVE CAMBER

Front wheels with positive camber look like a person who is:

- ☐ bowlegged
- ☐ knock-kneed

The tops of the wheels are tilted:

- ☐ inward
- ☐ outward

18731

31

bowlegged

outward

32

When the tops of the front wheels are tilted outward, the wheels have:

- ☐ positive camber
- ☐ negative camber

18732

32

positive camber

33

In order to change the camber of front wheels, you should:

- ☐ lower or raise the front wheels
- ☐ tilt the tops of the front wheels in or out
- ☐ turn the front wheels to the front or rear

18733

33

tilt the tops of the front wheels in or out

34

Front wheels that do not have positive camber or negative camber have ZERO camber.

Which picture shows wheels that have zero camber?

- ☐ picture A
- ☐ picture B
- ☐ picture C

18734

34

picture A

35

To change wheels with zero camber to positive camber, you should:

- ☐ tilt the tops of the front wheels outward
- ☐ tilt the tops of the front wheels inward
- ☐ reverse the wheels to the rear of the car

18735

35

tilt the tops of the front wheels outward

36

Which wheels have negative camber?

- ☐ wheels A
- ☐ wheels B
- ☐ wheels C

This is because the wheels are tilted:

- ☐ inward
- ☐ outward
- ☐ straight up and down

18736

36

wheels C

inward

37

When the tops of the front wheels are closer together than the bottoms of the wheels, we say that the wheels have:

- ☐ negative camber
- ☐ positive camber
- ☐ zero camber

18737

37

negative camber

38

When wheels have positive camber, the:

- ☐ tops of the wheels are closer together
- ☐ tops of the wheels are farther apart
- ☐ wheels are straight up and down

18738

38

tops of the wheels are farther apart

39

When wheels have zero camber the:

- ☐ wheels are straight up and down
- ☐ tops of the wheels are closer together than the bottoms of the wheels
- ☐ tops of the wheels are farther apart than the bottoms of the wheels

18739

BIBLIOGRAPHY

1. French and Svendsen, Mechanical Drawing, Webster - McGraw-Hill, Sixth Edition

2. French and Svendsen, Mechanical Drawing, Webster - McGraw-Hill, Seventh Edition

3. Spencer, Henry, Basic Technical Drawing, Macmillan Company

39

wheels are straight up and down

40

These front wheels have:

- ☐ positive camber
- ☐ negative camber
- ☐ zero camber

18740

40

positive camber

41

For a mechanic to make camber adjustments, he should:

- ☐ tilt the tops of the front wheels in or out
- ☐ twist the tops of the front wheels back or forth
- ☐ turn the wheels around to the rear of the car

18741

41

tilt the tops of the front wheels in or out

42

MATCH the following:

A.

1. _____ positive camber

2. _____ negative camber

3. _____ zero camber

B.

C.

18742

42

1. B

2. C

3. A

43

Adjustments made to a front end are called:

- ☐ abatement
- ☐ advancement
- ☐ alignment

18743

43

alignment

44

Front wheels are aligned to make:

- ☐ tires last longer
- ☐ tires wear out faster
- ☐ steering easy
- ☐ steering hard

18744

44

tires last longer

steering easy

45

Incorrectly aligned front ends will:

- ☐ make the car go straight
- ☐ make the car pull to one side
- ☐ wear tires evenly
- ☐ wear tires unevenly

18745

45

make the car pull to one side

wear tires unevenly

46

Aside from camber adjustment, wheels can also be TOED-IN or TOED-OUT.

Which set of wheels look like they would be called toed-in?

- ☐ wheels A
- ☐ wheels B

This is because toed-in wheels look like toes that are:

- ☐ pointing toward each other
- ☐ pointing away from each other

18746

46

wheels A

pointing toward each other

47

When the fronts of the wheels are closer together than the backs of the wheels, you say that the wheels are:

- ☐ toed-in
- ☐ toed-out

18747

47

toed-in

48

To adjust front wheels for toe-in or toe-out, the fronts of the wheels are moved: (CHECK ALL CORRECT ANSWERS)

- ☐ away from each other
- ☐ closer to each other
- ☐ to the inside of the car
- ☐ to the outside of the car

18748

48

away from each other

closer to each other

49

When a person's toes are facing outward, the heels are:

- ☐ closer together than the toes
- ☐ farther apart than the toes

Which set of wheels look like they are toed out?

- ☐ wheels A
- ☐ wheels B

18749

DESCRIPTORS - *LEARNING ACTIVITIES; *AUTOINSTRUCTIONAL AIDS; *DRAFTING; *GUIDELINES; INDUSTRIAL ARTS; HIGH SCHOOL STUDENTS; MANUALS; INSTRUCTIONAL AIDS
IDENTIFIERS - ELEMENTARY AND SECONDARY EDUCATION ACT TITLE III; ESEA TITLE III; LEARNING ACTIVITY PACKAGE; LAP

ABSTRACT - This learning activity package, developed under a grant from Elementary Secondary Education Act (ESEA) Title III, describes dimensioning rules and principles of drafting. Designed as a self-instructional unit for individual learning, it contains: (1) Rationale, (2) Primary Ideas, (3) Secondary Ideas, (4) Pretest Instructions, and (5) Five Secondary Ideas. Each secondary idea includes the stated objective and activities. A bibliography is given. Additional Learning Activity Packages (LAP) are available. (GR)

VT 011 502

49

closer together than the toes

wheels B

50

This car's front wheels are:

- ☐ toed in
- ☐ toed out

18750

50

toed in

51

LOOK at the picture above.

The fronts of the car's wheels are facing:

- ☐ away from each other
- ☐ toward each other

These wheels are:

- ☐ toed in
- ☐ toed out

18751

51

away from each other

toed out

52

MATCH the following:

A.

B.

C.

1. _____ fronts of the wheels closer than the backs of the wheels

2. _____ fronts of the wheels farther apart than the backs of the wheels

3. _____ tops of the front wheels farther apart than the bottoms of the wheels

53

1. C

2. B

3. A

54

If the tops of front wheels are farther apart than the bottoms of the wheels, the wheels are said to have:

- ☐ positive camber
- ☐ negative camber

When the fronts of the wheels are closer together than the backs of the wheels, we say that the wheels are:

- ☐ toed in
- ☐ toed out

54

positive camber

toed in

55

Camber adjustments tilt the tops of the front wheels in or out.

In toe-in and toe-out adjustments the fronts of the wheels are tilted toward each other or away from each other.

Are toe-in and toe-out adjustments the same as camber adjustments?

- ☐ yes
- ☐ no

18755

55

no

56

Moving the tops of the front wheels closer together or farther apart shows that:

- ☐ camber adjustments are being made
- ☐ toe-in adjustments are being made
- ☐ toe-out adjustments are being made

56

camber adjustments are being made

57

58

wheels A

59

Many pieces of furniture can roll around on wheels that are called CASTERS.

How many casters does the dresser have? _____

18759

59

4

60

This piece of furniture is being rolled on the floor.

The caster is a little bit:

- ☐ ahead of the piece of furniture
- ☐ behind the piece of furniture

18760

60

behind the piece of furniture

61

Each front wheel is mounted onto a:

- ☐ center link
- ☐ tie rod
- ☐ steering knuckle

18761

61

steering knuckle

62

When you tilt the top of the steering knuckle, the front wheel will:

- ☐ also be tilted
- ☐ not be affected
- ☐ stay the same

18762

62

also be tilted

63

The furniture caster is behind the piece of furniture.

The car wheel is tilted a little behind the:

- ☐ center link
- ☐ steering knuckle
- ☐ steering wheel

18763

63

steering knuckle

64

Tilting the top of the steering knuckle to change the tilt of the front wheel is called making a "caster adjustment."

To tilt the top of the wheel to the front of the car, you should:

- ☐ leave the steering knuckle alone
- ☐ tilt the steering knuckle up
- ☐ tilt the steering knuckle down

18764

64

tilt the steering knuckle up

65

If you tilt the steering knuckle up, the top of the front wheel will:

- ☐ move to the front of the car
- ☐ move to the rear of the car
- ☐ stay the same

18765

65

move to the front of the car

66

Tilting the top of the front wheel to the front or rear of the car is called:

- ☐ camber adjustment
- ☐ caster adjustment
- ☐ toe-in adjustment
- ☐ toe-out adjustment

18766

66

caster adjustment

67

Which wheel shows a caster adjustment?

- ☐ wheel A
- ☐ wheel B

18767

67

wheel A

68

When the top of the front wheel is tilted to the front of the car, the caster is negative.

Which picture shows a wheel with ZERO caster?

- ☐ picture A
- ☐ picture B

18768

69

Which wheel shows negative caster?

- ☐ wheel A
- ☐ wheel B

18769

69

wheel B

70

Tilting the tops of the front wheels so that the tops are farther apart than the bottoms of the wheels is called a:

- ☐ camber adjustment
- ☐ caster adjustment
- ☐ toe-in adjustment

18770

70

camber adjustment

71

Tilting the top of the front wheel toward the front of the car is called a:

- ☐ camber adjustment
- ☐ caster adjustment
- ☐ toe-in adjustment

18771

71

caster adjustment

72

Making the front of the wheels closer to each other than the rear of the wheels is changing the car's:

- ☐ camber
- ☐ caster
- ☐ toe-in

18772

72

toe-in

73

MATCH the wheels with the different types of alignment?

A.

1. _____ camber

2. _____ caster

3. _____ toe-out

B.

C.

18773

73

1. A

2. C

3. B

74

When you tilt the steering knuckle up, you are moving the top of the steering knuckle and the top of the front wheel to the:

- ☐ front of the car
- ☐ rear of the car

18774

74

front of the car

75

The top of the steering knuckle and the top of the front wheel is tilted to the front of the car when the top of the steering knuckle is tilted:

- ☐ up
- ☐ down

18775

75

up

76

Tilting the top of the steering knuckle to the front of the car is done in:

- ☐ camber adjustments
- ☐ caster adjustments
- ☐ toe-in and toe-out adjustments

18776

76

caster adjustments

77

MATCH the following:

A. camber

B. caster

C. toe-in

1. _____ moving the top of the steering knuckle to the front or back of the car

2. _____ moving the top of the wheel to the inside or outside of the car

3. _____ moving the fronts of the wheels closer or farther apart

77

1. B

2. A

3. C

78

MATCH the following:

A. positive camber

B. negative caster

C. toe-out

D. toe-in

1. _____ moving the fronts of the wheels farther apart than the rears of the wheels

2. _____ tilting the top of the steering knuckle to the front of the car

3. _____ moving the fronts of the wheels closer together than the rears of the wheels

Why Study Dimensioning?

If the draftsman or designer is to produce a drawing so an object can be made accurately from it by a workman on the job, it must tell two complete stories. It tells these by means of:

1. VIEWS, describing shape of object.
2. DIMENSIONS and NOTES, giving sizes and other shop information.

The dimensions on a drawing must be the actual dimensions of the completed object. The job of the workman is to produce the object exactly as shown on the drawing. If the dimensions are wrong on the drawing, the object will be made wrong. Many pieces of this object would be mass produced before the error is caught resulting in a large expense and may cost the draftsman his job. It is very important to follow the basic rule of dimensioning:

1. ACCURACY
2. SIMPLICITY
3. CLEARNESS

DO NOT make the mistake of simply giving the dimensions you use to make the drawing.

GIVE the dimensions you want the workman to use in making the part.

78

1. C

2. B

3. D

79

Which picture shows wheels that are toed-in?

- ☐ picture A
- ☐ picture B
- ☐ picture C

Which picture shows wheels that have positive camber?

- ☐ picture A
- ☐ picture B
- ☐ picture C

18779

79

picture A

picture C

80

Which front end adjustment looks like the rollers on a piece of furniture?

- ☐ camber
- ☐ caster
- ☐ toe-in
- ☐ toe-out

18780

81

alignments

82

Tilting the top of the front wheels to the front or back of the car is one way of aligning the front end.

CHECK the picture that shows a front wheel that has this kind of adjustment:

☐ A

☐ B

This is a:

☐ camber adjustment

☐ caster adjustment

18782

82

A

caster adjustment

83

Caster adjustments tilt the tops of the front wheels:

- ☐ to the front of the car
- ☐ to the back of the car
- ☐ in and out

18788

83

to the front of the car

to the back of the car

84

Which diagram shows camber?

- ☐ A
- ☐ B
- ☐ C

Which diagram shows caster?

- ☐ A
- ☐ B
- ☐ C

18784

84

C

A

85

How can you align the front end?

- ☐ by adjusting the camber
- ☐ by adjusting the valves
- ☐ by adjusting the caster

18785

85

by adjusting the camber

by adjusting the caster

86

The purpose of camber and caster adjustments is to:

- ☐ increase tire life
- ☐ make tires wear faster
- ☐ make a car pull to one side
- ☐ make a car go straight

18786

86

increase tire life

make a car go straight

87

The tops of the front wheels are tilted outward.

This sentence describes a:

- ☐ caster tilt (negative)
- ☐ camber tilt (positive)

The tops of the front wheels are tilted inward.

This sentence describes a:

- ☐ caster tilt (negative)
- ☐ camber tilt (positive)

87

camber tilt (positive)

camber tilt (positive)

88

Which tires show each of the following alignments?

camber ☐ A ☐ B ☐ C

toe out ☐ A ☐ B ☐ C

18788

PRIMARY IDEA

Dimensioning Rules and Procedures

SECONDARY IDEAS

The student will be able to:

1. Gain a basic understanding of the principle of shape description.

2. Develop a skill in the construction and use of dimension and extension lines, arrowheads, numerals and notes.

3. Learn the proper construction and use of finish marks and leaders.

4. Develop an understanding of the selection and placing of dimensions.

5. Understand the various systems of dimensioning.

1846

88

A

C

89

A B C

Which tires show each of these alignments?

camber _____

caster _____

18789

89

B

A

90

Which tires show each of the following alignments?

camber _____

toe-out _____

90

A

C

91

Which sentence below describes camber?

- ☐ The tops of the front wheels are tilted to the outside or inside of the car.
- ☐ The fronts of the wheels are closer together than the backs of the wheels.

18791

91

The tops of the front wheels are tilted to the outside or inside of the car.

92

Which of the following phrases describes caster?

- ☐ The tops of the front wheels are tilted to the front or rear of the car.
- ☐ The tops of the steering knuckles are tilted to the outside or inside of the car.
- ☐ The tops of the front wheels are tilted out.

18792

92

The tops of the front wheels are tilted to the front or rear of the car.

93

Front wheels are toed in by having the fronts of the wheels:

- ☐ closer together than the backs of the wheels
- ☐ farther apart than the backs of the wheels
- ☐ the same distance apart as the backs of the wheels

93

closer together than the backs of the wheels

94

Front wheels are toed out by moving the fronts of the wheels:

- ☐ closer together than the backs
- ☐ farther apart than the backs
- ☐ the same distance apart as the backs

94

farther apart than the backs

95

Front ends are aligned to make: (CHECK ALL CORRECT ANSWERS)

- ☐ tires last longer
- ☐ steering easier
- ☐ a car go straight

18795

95

tires last longer

steering easier

a car go straight

96

Adjusting a front end is called:

- ☐ aligning
- ☐ braking
- ☐ steering

18796

96

aligning

THIS IS THE END OF BOOK 12

18797

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

Cars that are correctly aligned will:

- ☐ steer easy
- ☐ steer hard
- ☐ go straight
- ☐ pull to one side

2

Which of the above diagrams show wheels that have zero camber? ____

After reading the secondary ideas, if you feel you can pass the pre-test on dimensioning, see your instructor for the pre-test . . .

NOW:

After you have completed your pre-test, bring the test to your instructor.

1847

3

Front ends that are correctly aligned will:

- ☐ wear tires ever
- ☐ wear tires faster
- ☐ wear tires slowly
- ☐ wear tires unevenly

4

Tilting the tops of the front wheels to the inside or outside of the car makes a:

- ☐ camber adjustment
- ☐ caster adjustment
- ☐ toe-in or toe-out adjustment

5

Tilting the tops of the front wheels to the front or rear of the car makes a:

- ☐ camber adjustment
- ☐ caster adjustment
- ☐ toe-in or toe-out adjustment

18799

6

Tilting the fronts of the front wheels closer together or further apart makes a:

- ☐ camber adjustment
- ☐ caster adjustment
- ☐ toe-in or toe-out adjustment

7

A B

This wheel was adjusted for caster to give the wheel a negative caster. The adjustment was done by tilting the top of the steering knuckle:

- ☐ up (or forward)
- ☐ down (or backward)
- ☐ so that it is straight up and down

8

These front wheels have ZERO camber.

To adjust these wheels to positive camber the top of the wheels should be:

- ☐ tilted inward
- ☐ tilted outward
- ☐ left straight up and down

9

Adjustments made to a car's front end are called _____ .

IDENTIFIERS - *MANPOWER DEVELOPMENT AND TRAINING ACT PROGRAMS; MDTA PROGRAMS

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on the suspension system was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

AUTO MECHANICS COURSE

BOOK 13: SUSPENSION SYSTEM

Developed under the Manpower Development and Training Act of 1962 (PL 87-415), contract No. MDS 24-64 between the Secretary of Labor and Young Men's Christian Association of Greater New York, by Basic Systems Incorporated.

18804

1

Shock absorbers:

- ☐ hold the wheel on the axle
- ☐ smooth out spring bounce
- ☐ tie springs onto the axle

2-6

MATCH the letters with the pictures:

A. air spring
B. coil spring
C. leaf spring
D. torsion bar
E. shock absorber

2.____ 
3.____

4.____

5.____

6.____

18805

7

The job of an automobile spring is to:

- ☐ keep the wheels steady while the car bounces
- ☐ let the car bounce with the wheels
- ☐ keep the car steady while the wheels bounce

8

What does the suspension system do?

- ☐ holds the axis on the chassis
- ☐ makes the frame jiggle
- ☐ smooths out the car's ride
- ☐ stops the car

9-10

Which of the following are part of the suspension system?

- ☐ the axle
- ☐ the chassis
- ☐ the shock absorbers
- ☐ the springs

1

This section will teach you which parts make a car drive smoothly over a bumpy road.

After you have finished this part of the course, which question should you be able to answer?

- ☐ How does a car stop?
- ☐ What gives a more level ride?
- ☐ When do you put gas in?

18807

1

What gives a more level ride?

2

Which car is driving smoothly after the bump?

- ☐ car A
- ☐ car B
- ☐ car C

18808

Secondary Idea #1:

To gain a basic understanding of the principles of shape description.

Student Objective #1

Given the text and available reference material, the student will read these to gain an understanding of size description.

Activities for Student Objective #1:

A. Required:

1. Read Chapter 11, "Size Description", page 130 *Mechanical Drawing*.

B. Optional:

1. Read Chapter 9, "Dimensioning", page 122, *Basic Technical Drawing*.

OR

Read Chapter 3, "Dimensions", page 29, *Drafting Rules and Principles*.

2

car A

3

Which car is in bad shape after the bump?

- ☐ car A
- ☐ car B
- ☐ car C

18809

3

car B

4

A smooth-driving car goes over a bump.

After it is over the bump the:

- ☐ car shakes apart
- ☐ wheels are crushed
- ☐ wheels hold the car up

18810

4

wheels hold the car up

5

If a car that drives smoothly goes over a bump the:

- ☐ bump will break the car
- ☐ car can take the bump
- ☐ wheels will be crushed

18811

5

car can take the bump

NO ANSWER NEEDED

7

Automobile springs are connected to the car's chassis.

How many springs does this car have? ____

18813

7

4

8

LOOK AT PANEL 1

For each car shown in the panel, the springs are always connected to the:

- ☐ chassis
- ☐ drive shaft
- ☐ transmission

18814

8

chassis

9

When a car goes over a bump, the wheels will:

- ☐ go up and down
- ☐ go up
- ☐ stay on the bump

18815

9

go up and down

10

This car is bouncing up and down because:

- ☐ it is on a smooth road
- ☐ it went over a bump on the road
- ☐ the driver is bouncing up and down

18816

10

it went over a bump on the road

11

To give people a smooth ride, the car has special parts called the SUSPENSION SYSTEM.

Suspension-system parts make the ride smooth by:

- ☐ letting the wheels go up and down
- ☐ making the wheels bounce harder
- ☐ smoothing the up-and-down bounce of the car

18817

11

smoothing the up-and-down
bounce of the car

12

COIL SPRING

LEAF SPRING

SHOCK ABSORBER

Parts that stop a car from bouncing and smooth out the ride are all parts of the SUSPENSION SYSTEM.

Suspension-system parts are springs and:

- ☐ chassis
- ☐ frames
- ☐ shock absorbers

18818

Secondary Idea #2:

To learn the proper construction and use of dimension and extension lines, arrowheads, numerals, and notes.

Student Objective #1:

Given the necessary drawing plates, the student will be able to develop an ability to accurately construct dimension and extension lines, arrowheads, numerals and shop notes.

Activities for Student Objective #1:

A. Required:

1. Using the figures shown on the top of plate D-1, dimensions and extension lines so they are spaced to provide clearness. DO NOT DRAW ARROWHEADS ON YOUR DIMENSION LINES.

2. Using Figure 11-5 on page 131 in your text, *Mechanical Drawing*, as a guide, practice the use of arrowheads on plate D-2.

3. Using your previously drawn dimension lines on plate D-1, draw in the necessary arrowheads.

4. Complete plate D-5 titled "Dimensioning Practice."

5. Refer to Art. 11-7, "Numerals and Notes", page 130 in the *Mechanical Drawing* text while completing plate D-3.

6. Refer to Art. 11-7, "General Rules of Dimensioning", page 137 in *Mechanical Drawing* text while completing plate D-6.

B. Optional:

1. Complete plate D-4

OR

Bring a blueprint to class showing the dimensioning practices used by a professional draftsman.

12

shock absorbers

13

Parts that stop a car from bouncing up and down are all parts of the:

- ☐ power transmission system
- ☐ steering system
- ☐ suspension system

18819

13

suspen: n system

14

The suspension system: (CHECK TWO)

- ☐ keeps the car from bouncing around
- ☐ makes the ride bumpy
- ☐ smooths out the ride
- ☐ carries bumps to the driver of the car

18820

14

keeps the car from bouncing around

smooths out the ride

15

COIL SPRING

LEAF SPRING

SHOCK ABSORBER

These are parts of the:

- ☐ brake system
- ☐ exhaust system
- ☐ suspension system

18821

15

suspension system

16

If a car had no springs or shock absorbers, the ride would be:

- ☐ bumpy
- ☐ smooth
- ☐ the same as with springs and shock absorbers

18822

266 OF 327

ED

056 238

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

16

bumpy

17

When a car goes over a bump, to keep the car steady the springs must:

- ☐ not move
- ☐ bounce up and down without stopping
- ☐ bounce up and down and then stop bouncing

18823

26

17

bounce up and down and then stop bouncing

18

Another part is built into the suspension system to keep the car steady while the springs bounce.

This part is the:

- ☐ center link
- ☐ tie rod
- ☐ shock absorber

18824

18

shock absorber

19

If a car had only springs in its suspension system:

- ☐ it would bounce a lot
- ☐ bouncing would stop
- ☐ it would not bounce

18825

19

it would bounce a lot

20

Which arrow is pointing to the part that keeps springs from bouncing too much?

- ☐ arrow A
- ☐ arrow B
- ☐ arrow C

18826

20

arrow B

21

The springs are mounted on the:

- ☐ chassis
- ☐ ground
- ☐ wheels

18827

Secondary Idea #3:

Learn the proper construction and use of finish marks and leaders.

Student Objective #1:

Given the necessary drawing plates, the student will be able to show, in detail, surfaces to be machined by the use of finish mark symbols. Leader lines will also be drawn from a note or dimensions to the place where it applies.

Activities for Student Objective #1:

A. Required:

1. Refer to page 130 in the *Mechanical Drawing* text while completing plate D-7.

21

chassis

22

The body of the car is mounted on the:

- ☐ chassis
- ☐ springs
- ☐ wheels

18828

22

chassis

23

To keep the body of the car from bouncing when the wheels go up and down:

- ☐ the chassis should be kept steady
- ☐ the driver should be kept steady
- ☐ the wheels should be kept steady

18829

23

the chassis should be kept steady

24

Parts that keep the chassis steady are the:

- ☐ power transmission system
- ☐ steering system
- ☐ suspension system

18830

24

suspension system

25

The job of the suspension system is to:

- ☐ keep the car smooth and steady
- ☐ keep the car bouncing up and down
- ☐ keep the driver on the alert

18831

25

keep the car smooth and steady

26

Suspension-system parts connect which part of the car to the steering knuckle assembly?

- ☐ chassis
- ☐ steering wheel
- ☐ transmission gear assembly

18832

26

chassis

27

When driving a car, you want the car to go:

- ☐ forward
- ☐ up
- ☐ down

The system that keeps the car from doing what you do not want it to do is called the:

- ☐ brake system
- ☐ electrical system
- ☐ suspension system

18833

27

foward

suspension system

28

The job of the suspension system is to:

- ☐ bring the car to a halt
- ☐ let the car make a turn to the left or right
- ☐ smooth out the car's ride

18834

28

smooth out the car's ride

29

Parts that smooth out a car's ride are the:

- ☐ distributor
- ☐ shock absorbers
- ☐ springs
- ☐ wheels

18835

29

shock absorbers

springs

30

What do springs and shock absorbers do?

- ☐ align the front wheels
- ☐ let the car steer
- ☐ smooth out the ride

18836

30

smooth out the ride

31

CHECK the parts below that are in the suspension system:

- ☐ brake lines
- ☐ shock absorbers
- ☐ snap rings
- ☐ springs
- ☐ wheels

18837

Secondary Idea #4:

To develop an understanding of the selection and placing of dimensions.

Student Objective #1:

The student will be able to select and place the necessary size and location dimensions on various views of an object.

Activities for Student Objective #1:

A. Required:

1. Read the following information about size and location dimensions.

SELECTION OF DIMENSIONS

All necessary dimensions should be shown.

Dimensions are classified into two groups: (a) size dimensions and (b) location dimensions, both of which are needed to show the necessary details of parts.

An object and its details have three dimensions in space, all of which must be shown on the drawing. The methods of construction should be understood, for all dimensions which are needed in making an object should be given.

Dimensions which would make assembly drawings too complicated are sometimes omitted. However, these dimensions must be given in detail drawings.

3. C

50

For a car to ride smoothly, it must have springs and shock absorbers.

A car with shock absorbers and a broken spring will give:

- ☐ a bumpy ride
- ☐ a smooth ride
- ☐ the same ride as before

18856

50

a bumpy ride

51

A suspension system with springs alone and no shock absorbers will:

- ☐ keep bouncing after going over a bump
- ☐ stop bouncing at once after going over a bump
- ☐ stay the same after going over a bump

18857

Secondary Idea #5:

To understand the various systems of dimensioning.

Student Objective #1:

Given the necessary drawing plates, the student will be able to develop an ability to accurately dimension views by the aligned and unidirectional system.

Activities for Student Objective #1:

A. Required:

1. Refer to Art. 11-12, "Placing Dimensions for Reading", on page 133 in the *Mechanical Drawing* text while completing the following:

   a. The Cone Gland on the upper half of plate D-11 using the aligned system of dimensioning.

   b. Complete the Sleeve on the lower half of plate D-11 using the unidirectional system of dimensioning.

B. Optional:

1. Locate a blueprint from the automotive or aircraft industry showing unidirectional system of dimension.

2. Define the following terms:

   a. Fillet
   b. Round
   c. Leader
   d. Finish Mark
   e. Radius

3. Complete plate D-12 using the unidirectional system of dimensioning.

51

keep bouncing after going over a bump

52

Which car will give a smoother ride?

- ☐ a car that has springs
- ☐ a car that has springs and shocks

18858

52

a car that has springs and shocks

53

Shock absorbers smooth out a spring's bounce.

Using shock absorbers with springs:

- ☐ has no effect on the ride
- ☐ gives a smooth ride
- ☐ gives a rough ride

18859

53

gives a smooth ride

54

MATCH the correct letter to each of the following parts:

chassis _____

leaf springs _____

rear wheels _____

Small Business Administration, Washington, D.C.
MF AVAILABLE IN VT-ERIC SET.
PUB DATE - 70 49p.

DESCRIPTORS - *RESOURCE MATERIALS; TECHNICAL REPORTS; *TECHNOLOGY; *METAL INDUSTRY; METAL WORKING OCCUPATIONS; *TECHNICAL EDUCATION; PATENTS; METALLURGY

ABSTRACT - This publication of the Small Business Administration (SBA) presents a number of innovative processes and devices selected and intended to be of interest and use to small businesses concerned with metalworking technology. Developed through government space, nuclear energy, and defense programs, the material is presented in the form of brief digests from three major sources: NASA/AEC Tech Briefs, government-owned patents, and reports from the Clearinghouse for Federal Scientific and Technical Information. Brief general information is given on the Technology Utilization program of the SBA , as well as procedures for obtaining the full reports from which the digests are taken, followed by more than 125 digests covering: (1) forming, (2) heat treating and cleaning, (3) instrumentation, (4) joining, (5) machining, (6) metals, (7) new products, and (8) seals, coatings, and lubricants. Order forms for all three categories of sources are also provided. (AW)

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

Springs and shock absorbers are in the:

- ☐ cooling system
- ☐ power transmission system
- ☐ suspension system

2

The job of an automobile's suspension system is to:

- ☐ hold the axis on the chassis
- ☐ make the frame shaky
- ☐ smooth out the car's ride
- ☐ stop the car

3

Automobile springs:

- ☐ bounce the car while the wheels remain steady
- ☐ let the car bounce with the wheels
- ☐ keep the car steady while the wheels go up or down

4-8

MATCH the letters with the pictures:

A. air spring
B. coil spring
C. leaf spring
D. torsion bar
E. shock absorber

4. ____

5. ____ 
6. ____

7. ____

8. ____

9

If a car had no shock absorbers, the:

- ☐ car would not bounce
- ☐ springs would not bounce
- ☐ springs would bounce too much

10

An automobile:

- ☐ can have different springs at the front and at the rear
- ☐ cannot have different springs at the front and at the rear

18897

6

NO ANSWER NEEDED

7

The parts of the electrical system that are screwed into the engine are the:

- ☐ distributors
- ☐ coils
- ☐ spark plugs

18898

7

spark plugs

8

The carburetor makes a mixture of air and gasoline.

This mixture enters the engine through the:

- ☐ intake manifold
- ☐ exhaust manifold
- ☐ manifold heat control valve

18899

8

intake manifold

9

At the same time that the air-gasoline mixture enters the engine, the spark plugs that are screwed into the engine make a spark.

When the spark plugs spark the mixture of air and gasoline:

- ☐ an explosion will happen
- ☐ they will mix together
- ☐ there will be no change at all

9

an explosion will happen

10

The part that causes the air-gasoline mixture to explode is the

_____ _____.

18901

10

spark plug

11

The job of the spark plug is to _____ the air-gasoline mixture.

This will happen inside the:

- ☐ engine
- ☐ ignition coil
- ☐ master cylinder

11

explode

engine

12

The spark is made in the bottom of the spark plug.

The bottom of the spark plug is screwed into a part of the engine called the _____ _____.

18903

12

combustion chamber

13

In the combustion chamber, there is an explosion of _____ and _____ .

18904

13

air gasoline

14

The spark explodes a mixture of air and gasoline.

This happens in the c_____ c_____.

18905

14

combustion chamber

15

The combustion chamber is really a small space at the top of the engine.

When explosions take place in a very small space:

- ☐ a lot of pressure builds up
- ☐ no pressure builds up
- ☐ little pressure builds up

a lot of pressure builds up

16

Pressure builds up in the combustion chamber when an _____ takes place.

18907

17

spark

18

If there is an explosion in a can and the lid is not on tight, the pressure of the explosion will blow the _____ off.

What will happen to any moveable part when it is near an explosion?

- ☐ It will be pushed away from the explosion.
- ☐ It will stay where it is.
- ☐ It will blow into the explosion.

18909

18

lid

It will be pushed away from the explosion.

19

The piston is a moveable part that goes up and down in the cylinder.

When there is an explosion in the combustion chamber above the piston, the pressure of the explosion will:

- ☐ force the piston down
- ☐ not touch the piston
- ☐ move the piston up

19

force the piston down

20

When the force of the explosion pushes the piston down, the piston forces a shaft to turn which shaft? _____

18911

20

crankshaft

21

When the crankshaft turns, which large part at the rear of the crankshaft is made to turn? _____

18912

21

flywheel

22

When the flywheel turns, it gives force to the Power Transmission System.

NAME the part of the engine that transmits power to the Power Transmission System: _____

18913

22

flywheel

23

When the flywheel turns, it gives power to the _____ _____ system.

18914

23

power transmission

24

The car moves forward when the flywheel:

- ☐ moves up and down
- ☐ stays still
- ☐ turns

18915

FOREWORD

The benefits of unclassified Government-sponsored research and development are available to the Nation's business community. The Small Business Administration, through its Technology Utilization program, brings these benefits to the attention of small manufacturers, research and development concerns, and other potential users. Small businesses, to remain competitive and to assure future growth and profitability, must provide for technological growth in their planning.

This publication, *Selected Advances in Metalworking Technology*, identifies a number of selected innovative processes and devices in forming, joining, machining, heat treating and cleaning, coating metals, and related instrumentation which have evolved from Government space, nuclear energy, and Defense programs. We believe that there are industrial and commercial possibilities among them. In any case, we hope they will stimulate the inventiveness and ingenuity that characterize the small businessman.

Changing a process of production, or adding to an existing line of production, may call for far-reaching administrative decisions, often requiring managerial, technical, or financial guidance and assistance. SBA's programs are geared to provide these and other services.

When additional innovations become available, they will be reported in future issues of this and similar SBA publications.

HILARY SANDOVAL, JR.,
Administrator.

connects the piston to the crankshaft

<u>or</u>

pushes down on the crankshaft

67

Explosions take place inside the _____ _____.

18958

67

combustion chamber

68

In order to get lots of power in the engine, the explosions must push down:

- ☐ gently on the piston
- ☐ very hard on the piston
- ☐ without touching the piston

18959

68

very hard on the piston

69

exploding fuel escapes by piston

If there were a space between the sides of the piston and the cylinders:

- ☐ the force from the combustion chamber explosions would go into the empty space
- ☐ the force from the combustion chamber explosions would still push down <u>only</u> on the piston

18960

69

the force from the combustion chamber explosions would go into the empty space

70

exploding fuel escapes by piston

To get the most force from the combustion chamber explosions, the space between the piston and the cylinder walls should be:

- ☐ open
- ☐ sealed tight
- ☐ left the same

18961

70

sealed tight

71

Rings fit around the piston to seal the space between the piston and the cylinder walls.

Piston rings:

- ☐ keep all the power pushing only on the top of the piston
- ☐ open a space between the piston and the cylinder walls
- ☐ do not affect the space between the piston and the cylinder walls

74

pistons

seal

75

Where are piston rings found? _____.

Piston rings seal the space between the _____ and the _____ _____.

18966

75

around pistons

piston

cylinder walls

76

NAME the part that is pushed down by combustion chamber explosions: _____

18968

76

piston

77

A six cylinder engine has _____ pistons.

How many connecting rods are connected to the piston and the crankshaft in a six cylinder engine? _____

18969

77

6 or six

6 or six

78

The pistons push the connecting rods down, one at a time.

A running 6 cylinder engine has 6 _____ pushing down on the connecting rods.

This will:

- ☐ keep the crankshaft turning
- ☐ stop the crankshaft from turning
- ☐ not affect the turning of the crankshaft

18970

78

pistons

keep the crankshaft turning

79

Combustion chamber explosions do not all take place at one time. They happen one at a time in a defined order. The explosions happen very quickly.

The rapid series of explosions keeps the crankshaft turning:

- ☐ not at all
- ☐ quickly
- ☐ slowly

18971

79

quickly

80

When many connecting rods are pushing down on the crankshaft at different times, the _____ will turn unevenly or in a bumpy way.

Because each _____ happens at a different time, the crankshaft will turn unevenly.

18972

81

flywheel

82

Without a flywheel, the crankshaft would turn in:

- ☐ uneven motion (or "bumpy" motion)
- ☐ no motion
- ☐ smooth motion

18974

82

uneven motion (or "bumpy" motion)

83

The job of the flywheel is to smooth out the uneven turning of the _____ .

18975

83

crankshaft

84

NAME the part that smooths out the uneven turning of the crankshaft: _____

18976

SMALL BUSINESS AND TECHNOLOGY TRANSFER

Technology transfer involves the use of technology developed for one purpose to fulfill a need elsewhere. It requires the knowledge that an advance has occurred in one field, the recognition of its significance in related or different fields, and the capability to make the required adaptations.

During the past few years, more emphasis has been given to the commercial utilization of new technology emerging from Federally sponsored research and development programs. The reason for this emphasis is Government's concern that the Nation gain the maximum return on its investment in research and development. The space program has already made significant contributions in advancing such technical areas as aerodynamics, electronics, materials, metalworking, communications, navigation, and meteorology. These advances, in turn, have served to improve the economy. Intelligent use of Government sources of technology can be especially important to small manufacturers who do not have research and development capabilities.

Technical information from Government R. & D. is disseminated through such media as conferences, seminars, and workshops, U.S. Government Research and Development reports, U.S. Government-owned patents, NASA/AEC Tech Briefs, NASA special publications, trade and technical journals, and by counseling.

SBA hopes, through this publication and future similar issues, to transfer information on selected innovations to a

NASA/AEC TECH BRIEFS, GOVERNMENT-OWNED PATENTS, AND CLEARINGHOUSE REPORTS

The new processes and devices described in the following digests are from abstracts of reports of research and development funded by the U.S. Government during 1968. The digests are grouped into three broad categories: NASA and AEC Tech Briefs, Government-owned Patents, and Reports from the Clearinghouse.

SBA believes this selection of digests should be of more than average interest and use to small businesses concerned with metalworking technology. Some of the digests may suggest profitable ideas or lead to the solution of certain problems, or, at least, help to keep abreast of the state-of-the-art.

NASA/AEC Tech Briefs

The aerospace and nuclear energy programs conducted by the National Aeronautics and Space Administration (NASA) and the Atomic Energy Commission (AEC) continue to generate enormous volumes of scientific and technical knowledge. Both Agencies select those innovations considered to have commercial value and briefly describe them in the form of a Tech Brief. The Small Business Administration (SBA) cooperates with NASA and AEC in disseminating technical advances through this Technology Utilization booklet and similar industry-oriented publications. Copies of the full reports, or other back-up material from which the digests of the Tech Briefs are drawn, may be obtained by circling the appropriate key number on the Reader Service Card (see insert card) and sending it to your nearest SBA field office listed on the inside back cover.

information on selected innovations to all small manufacturers. Previous issues of the "Selected Advances" have been on electrical technology; welding, brazing, and soldering technology; tools, dies, jigs and fixtures technology; instrumentation technology, and computer technology.

SBA initiates, or cosponsors with educational institutions and other nonprofit organizations, seminars on technological subjects for groups of interested small manufacturers. The speakers present various examples of the effective use of technology to meet problems, pinpoint the need for modern technology in specific industrial sectors, and discuss the impact of technology on the profit and growth of various segments of the economy.

SBA also cosponsors workshops relating to the application of specific technological advances to solve industry problems for groups of small manufacturers. The cosponsors for such workshops are usually universities, or industry and trade associations.

Another effective method of accomplishing technology transfer is in single case, individual situations. To this end, SBA provides direct counseling by mail, phone, or personal interview at its field offices or during onsite visits to the small businessman's plant. The counselor advises on the effective use of technology to accelerate the profitability and growth of the firm. For cases requiring continuing expert counseling SBA will recommend the use of outside help, such as private consultants.

Government-Owned Patents

The patents on the following pages were selected for abstracting by the Technology Utilization Division of the Small Business Administration. They are U.S. Government-owned and may be used on a royalty-free, nonexclusive basis. Those selected appear to have potential commercial application. A printed copy of the full patent may be obtained at a cost of $0.50 each by listing it on the Patent Order Card (insert) and sending it to the U.S. Patent Office, Washington, D.C. 20231. These patents also may be reviewed at one of the depository libraries listed inside front cover of this publication. Further information about patents and how to get licenses for their use may be obtained from the administering agency cited in each patent description. Advice about using these patents may be requested from your nearest SBA office.

Reports From Clearinghouse

The Clearinghouse for Federal Scientific and Technical Information (CFSTI) is a central source of information about science and technology emerging from U.S. Government-sponsored programs. Unclassified technical reports and translations prepared by many Government Agencies are collected, catalogued, announced, and sold by CFSTI. With CFSTI's cooperation, the digests on the following pages were screened, selected, and prepared. Copies of the complete reports, paper ($3 each) or microfiche ($0.65 each), may be purchased from the Clearinghouse. To order these reports, list the document number (for example, PB–178 570, AD–670 921, LA–3759, or N67–36554) in the spaces provided on the Clearinghouse Document Card (insert) and check appropriate blocks to indicate either paper copy (PC) or microfiche (MF), and mail with your check or money order payable to Clearinghouse, U.S. Department of Commerce, Springfield, Va. 22151.

TECH BRIEF 68–10184—STRESS-CORROSION CHARACTERISTICS OF ALUMINUM CASTING ALLOY M–45

Aluminum foundries and shops casting aluminum alloy M–45 will be interested in this study by NASA of the stress-corrosion characteristics of the alloy. In particular, the study describes the best practices to follow in the casting and aging cycle to obtain optimum use of this alloy, which has unusually high strengths under cryogenic conditions. For example, normal aging processes most definitely degrade the alloy.

For additional information, circle Key No. 1 on Reader Service Card.

PROCESS OF CASTING A REACTIVE METAL (PAT. NO. 3,380,508)

By using molds of graphite powder, betonite, and water carefully mixed and cured, this patent permits reactive metals, such as magnesium and magnesium alloys, to be cast without any need for inhibitors which always degrade casting production. This molding material permits castings to be made which are impossible in sand molds regardless of the inhibitors used. Lithium and lithium-magnesium alloys are examples of such castings. The basic mixture of the mold is 92 to 95 percent graphite powder (20 to 60 mesh, acording to needs), and 5 to 8 percent of betonite and water. Any carbonaceous foundry material may be used instead of graphite. The mold material can readily be used for other metals, for example, aluminum, cast iron, and steel. It is relatively inexpensive. Moreover, it can be prepared into molds by using standard foundry equipment, thereby considerably reducing the operating costs of a reactive metal foundry.

Administering Office: Department of the Army, Office of the Judge Advocate General, Chief, Patents Division, Washington, D.C. 21315.

PRESSURE CASTING IN INVESTMENT MOLDS (AD–451 230)

Foundries and machine shops trying to improve their castings may find this study helpful. It is a report on methods for pressure casting nonferrous alloys into investment molds by Frankford Arsenal, Philadelphia, Pa. Experimental methods were compared with standard suction casting practices, and the best appeared to be the direct pressure diaphragm method. In this process, metal is forced into the mold in an upward direction with a high degree of control of metal stream velocity, turbulence, and casting pressure. Tests showed improved filling of the casting section and reduced defects in the casting cross-section because of lowered metal turbulence.

INTERACTION BETWEEN THE METAL AND THE MOLD DURING THE CASTING OF TITANIUM (AD–675 245)

Studies of the reactions between titanium (Ti) and various refractory oxides and materials used in connection with casting of titanium were translated from a Russian report at Wright-Patterson AFB, Ohio. Various mold and binding materials were used, with teeming temperatures from 1,790 to 1,950°. The maximum hardness and depth of hard zone rise considerably with the increased pouring temperature. The most satisfactory material investigated was zirconium oxide (ZrO_2) plus 15 atomic percent titanium with zirconium nitrate binder, since the optimum teeming temperature for Ti is 1,760°. Good results were obtained by using shell molds of ZrO_2 and Al_2O_3 on ethyl silicate.

INVESTIGATION OF SOLIDIFICATION OF HIGH-STRENGTH STEEL CASTINGS (AD–676 235)

The morphology, size, and distribution of sulfide inclusions are studied in vacuum melted and solidified AISI 4330 low alloy steel. The steel was

POST-TEST BOOK 14: MAJOR PARTS OF AN ENGINE

PART I

A BASIC SYSTEMS PROGRAM

19003

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

The Power Transmission System gets the engine's power from the _____.

2

The pistons and the connecting rods give their up and down motion to the _____.

3

Pistons are connected to the crankshaft by the _____ _____.

4

The fuel used by an automobile engine is a mixture of _____ and _____.

5

The fuel mixture explodes when the _____ _____ make a spark.

6

In what part of the engine do the explosions take place?

_____

7

Pistons go up and down in openings in the engine. NAME these openings:

_____

8

To seal the spaces between the pistons and the cylinder walls,
_____ _____ go around the pistons.

9

Cylinders are openings in the engine _____.

10

The part located at the top of the engine is called the cylinder
_____.

11

NAME the part that smooths out the uneven turning motion of
the crankshaft: _____

12

NAME the part that is pushed down by the explosions in the combustion chamber: _____

PRESSURE CASTING IN INVESTMENT MOLDS (AD–451 230)

Foundries and machine shops trying to improve their castings may find this study helpful. It is a report on methods for pressure casting nonferrous alloys into investment molds by Frankford Arsenal, Philadelphia, Pa. Experimental methods were compared with standard suction casting practices, and the best appeared to be the direct pressure diaphragm method. In this process, metal is forced into the mold in an upward direction with a high degree of control of metal stream velocity, turbulence, and casting pressure. Tests showed improved filling of the casting section and reduced defects in the casting cross-section because of lowered metal turbulence.

INTERACTION BETWEEN THE METAL AND THE MOLD DURING THE CASTING OF TITANIUM (AD–675 245)

Studies of the reactions between titanium (Ti) and various refractory oxides and materials used in connection with casting of titanium were translated from a Russian report at Wright-Patterson AFB, Ohio. Various mold and binding materials were used, with teeming temperatures from 1,790 to 1,950°. The maximum hardness and depth of hard zone rise considerably with the increased pouring temperature. The most satisfactory material investigated was zirconium oxide (ZrO_2) plus 15 atomic percent titanium with zirconium nitrate binder, since the optimum teeming temperature for Ti is 1,760°. Good results were obtained by using shell molds of ZrO_2 and Al_2O_3 on ethyl silicate.

INVESTIGATION OF SOLIDIFICATION OF HIGH-STRENGTH STEEL CASTINGS (AD–676 235)

The morphology, size, and distribution of sulfide inclusions are studied in vacuum melted and solidified AISI 4330 low alloy steel. The steel was deoxidized with various elements, such as aluminum, silicon, and manganese, used individually or in combinations, and boron, zirconium, and cerium. Types 1, 2, and 3 inclusions are investigated in detail. The effects of chemistry (Al, Si, Mn) on inclusion type is quantitatively determined. This report by the Massachusetts Institute of Technology, Department of Metallurgy and Materials Science, Cambridge, Mass., should be of interest to foundries.

EXTRUSION OF TOOL STEEL WITHOUT PRESS RESIDUES (AD–674 155)

This report, a translation from Russian by Wright-Patterson AFB, Ohio, describes a technique of butt-free hot extrusion of solid and hollow shapes from structural and high-alloy tool steels. The principle of the method, materials used, and auxiliary benefits are related. Small manufacturers may be interested in this extrusion process. The principle is as follows: an intermediate link or "insert" is placed between the punch and the forging; the height of the insert is not lower than that of the die. The material of the insert must withstand considerable loads without a change in its properties, its strength should be lower than the strength of the extruded metal, and it should display the qualities of a lubricant. Toward the end of the extrusion the material passes through the die and disintegrates into powder, which facilitates its removal for reuse. This technique also improves the conditions for automating the process of hot extrusion.

TOOL FOR COLD EXTRUSION OF PIPES FROM ALUMINUM ALLOYS (AD–675 235)

A possible new machine for cold forging of aluminum alloy pipes is described in this report translated from Russian at Wright-Patterson AFB, Ohio. Schematics of the machine parts are shown. Tabulations of the composition of various machine parts and test results of machine performance during manufacture of different size pipes are included. This development will be of interest to machine builders and users of extrusion equipment.

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on the major parts of an engine. Part II, was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

1

The fuel mixture must go through the _____ _____ to get to the combustion chamber.

2

Burned gases go through the _____ _____ when they leave the combustion chamber and go to the exhaust system.

3

In order for the fuel mixture to get into the combustion chamber, the _____ _____ must open.

4

In order for the burned gases to get out of the combustion chamber, the _____ _____ must open.

5

When the valves are closed, they sit on a part called the valve _____.

6

A part goes around the valve to keep it from wobbling. This part is called the valve _____.

7

The shaft that moves the valves up is called the _____.

8

The shaft that is turned by the up and down motion of the pistons is called the _____.

9

NAME the gears that keep the two shafts working together:

_____

10

What part on the valve is squeezed together for the valve to open up?

_____ _____

11

Valves are lifted up by _____ _____.

12

The part of the camshaft that lifts the valve lifter is called the _____.

Name _____

Date _____

Starting time _____

Finishing time _____

Forming: Casting, Extruding, Forging (continued)

REVIEW OF RECENT DEVELOPMENTS, METALWORKING (AD–453 480)

This report is a review of the following three developments in metalworking made by the Metals Information Center, Battelle Memorial Institute, Columbus, Ohio: (1) Molybdenum-forging process for producing close-die forgings of TZM molybdenum alloy to aircraft and missile requirements. The new procedure results in shorter transfer and forging times which prevent heat losses and excessive oxidation, and show that MoS_2 performs satisfactorily as a die lubricant. (2) Precision forging of gears and turbine wheels with integral blades. It is now feasible to use radial-extrusion to produce high quality RENE–41, Waspalloy, A–286 alloy turbine wheels, and A1S1 9310 steel and 18-percent nickel maraging steel gears. The process involves continuous grain-flow patterns and improves the dimensional and surface quality of the products. (3) The development of a 2400° F. forging die system to determine the upper temperature limit of forging dies cast from INCONEL 713C alloy, and to minimize the required forging sequence for steel by using the hot-die system.

SELECTION OF DIE STEELS FOR HIGH-SPEED METAL-FORMING TOOLS (AD–673 821)

Tool manufacturers may be interested in this report translated from Russian by Wright-Patterson AFB, Ohio. Three tool steels were tested for their suitability as die materials in high energy rate of aluminum, steel, titanium, and nickel based alloys.

FORGING OF LARGE FORGED PIECES (CHAPTER II) (AD–674 039)

This report is a translation from Russian at Wright-Patterson AFB, Ohio, and may be of interest to manufacturers using the processes described. Tables and diagrams illustrate the following: heating of billets and blanks for forging using structural carbon and alloy steels, and the mechanical properties of discs forged at various temperatures. Also, the tables and charts illustrate a new method for forging pieces of turbine and compressor discs and lids on floating blocks under hydraulic presses, and the technological factors determining the deformation of metal during rolling of forged lead, aluminum, and steel blanks.

ANALYSIS OF CRACKING IN SWAGED 7075–T6 ALUMINUM ALLOY TUBING (AD–673 954)

This report from the Naval Research Laboratory, Washington, D.C., might interest shops forming and/or using swaged aluminum tubing in their products. It discusses intergranular fractures caused by stress-corrosion mechanism failure. Microstructural examination by electron microscopy showed that a significant short transverse-type grain orientation existed in the fracture plane.

EXPERIMENTAL DETERMINATION OF THE BASIC PARAMETERS OF A HIGH-SPEED HAMMER (AD–674 342)

Wright-Patterson AFB, Ohio, translated a Russian report which might be useful to manufacturers or users of high-speed hammers. It describes the method and results of determining the velocities and collision energies of the counter-moving parts of a high-velocity press hammer. It has a maximum impact energy of 8,900 kg-m which is represented by a frame and a ram, plus accessories.

STRENGTHENING MECHANISMS DURING THE HEAT TREATMENT OF THREE TITANIUM ALLOYS (AD–675 464)

Firms involved with heat treating of titanium alloys will be interested in this report from the Army Materials and Mechanics Research Center, Watertown, Mass. It discusses the effects of solution and aging treatments on three alloys, Ti–6Al–4V, Ti–6Al–6V–2Sn, and Ti–8Al–1Mo–1V. The following

2

great force

3

To get the greatest force out of combustion chamber explosions, the force should:

- ☐ only push down on the piston
- ☐ partly go away from the top of the piston
- ☐ not be allowed to happen at all

19017

3

only push down on the piston

4

The carburetor makes a mixture of _____ and _____.

This mixture first goes through which part before entering the combustion chamber?

- ☐ exhaust manifold
- ☐ intake manifold
- ☐ neutral manifold

19018

4

air

gasoline

intake manifold

5

When the spark ignites the air-gasoline mixture, there is an explosion.

This explosion makes power and also makes burned gases.

You have learned that burned gases leave the engine through the:

- ☐ cooling system
- ☐ exhaust system
- ☐ power transmission system

19019

5

exhaust system

6

The part of the exhaust system that is connected to the engine is the:

- ☐ exhaust manifold
- ☐ muffler
- ☐ tailpipe

19020

6

exhaust manifold

7

There is an opening for the air-gasoline mixture to get into the combustion chamber, and, in the same way, there is also an opening for the burned gases to _____ of the combustion chamber.

19021

7

get out

(or similar answer)

8

Openings for the fuel mixture to enter the combustion chamber and openings for the burned gases to leave the combustion chamber are:

- ☐ on the same side of the combustion chamber
- ☐ on opposite sides of the combustion chamber
- ☐ on the inside of the combustion chamber

8

on opposite sides of the combustion chamber

9

The opening at the side of the combustion chamber by which the fuel mixture enters the combustion chamber is called the INTAKE PORT.

DARKEN the intake port.

19023

9

10

SHADE IN the valve port where exhuast gases leave the combustion chamber:

This is the:

- ☐ exhaust port
- ☐ intake port

19024

10

11

The automobile's fuel mixture enters the combustion chamber and the burned gases leave the combustion chamber through:

- ☐ valve harbors
- ☐ valve ports
- ☐ valve wharves

19025

11

valve ports

12

What goes through the valve ports of an engine?
(CHECK two correct answers)

- ☐ air-gasoline mixture
- ☐ burned gases
- ☐ raw gasoline
- ☐ unburned gasoline

19026

carbon and alloy steels, and the mechanical properties of discs forged at various temperatures. Also, the tables and charts illustrate a new method for forging pieces of turbine and compressor discs and lids on floating blocks under hydraulic presses, and the technological factors determining the deformation of metal during rolling of forged lead, aluminum, and steel blanks.

ANALYSIS OF CRACKING IN SWAGED 7075–T6 ALUMINUM ALLOY TUBING (AD–673 954)

This report from the Naval Research Laboratory, Washington, D.C., might interest shops forming and/or using swaged aluminum tubing in their products. It discusses intergranular fractures caused by stress-corrosion mechanism failure. Microstructural examination by electron microscopy showed that a significant short transverse-type grain orientation existed in the fracture plane.

EXPERIMENTAL DETERMINATION OF THE BASIC PARAMETERS OF A HIGH-SPEED HAMMER (AD–674 342)

Wright-Patterson AFB, Ohio, translated a Russian report which might be useful to manufacturers or users of high-speed hammers. It describes the method and results of determining the velocities and collision energies of the counter-moving parts of a high-velocity press hammer. It has a maximum impact energy of 8,900 kg-m which is represented by a frame and a ram, plus accessories.

STRENGTHENING MECHANISMS DURING THE HEAT TREATMENT OF THREE TITANIUM ALLOYS (AD–675 464)

Firms involved with heat treating of titanium alloys will be interested in this report from the Army Materials and Mechanics Research Center, Watertown, Mass. It discusses the effects of solution and aging treatments on three alloys, Ti-6Al-4V, Ti-6Al-6V-2Sn, and Ti-8Al-1Mo-1V. The following characteristics were investigated: hardness measurements, electron microscopy, resistance measurements at the aging temperatures, and X-ray diffraction. Relatively small changes in alloy content have a marked effect on the strengths attainable by heat treatment. Two hardening mechanisms which account for all the observed responses to heat treatment are described. The changes in strength as the result of heat treatment are correlated with the equilibrium alloy contents of the phases present at the solution temperature.

TECH BRIEF 68–10285—PREWELD HEAT TREATMENT IMPROVES WELDS IN RENÉ 41

Shops and laboratories using René 41 have found the alloy seriously troubled by cracking during the post-weld heat treatment. Because most cracking seemed related to "strainage," NASA has determined that controlled cooling of the alloy (40° F./min.) from the solution-annealing temperature would eliminate 90 percent of the serious cracking. This technique, with modifications, should apply equally well to Waspalloy, U500, and other nickel-base alloys.

For additional information, circle Key No. 2 on Reader Service Card.

OPTIMUM CONDITIONS FOR BLAST CLEANING OF STEEL PLATE (AD–670 623)

The blast cleaning process and how it affects the surface of steel plate is described in this report by Collins Radio Co., Newport Beach, Calif. Exploratory tests showed that removing rust from steel plate and cleaning welds are best accomplished by blasting perpendicular to the surface. Small grain size abrasives achieve higher rates of cleaning. This process may be of interest to companies now using centrifugal machines since test results showed somewhat higher values for blast cleaning.

12

air-gasoline mixture

burned gases

13

Openings at the side of the combustion chamber are called valve

_____.

19027

13

ports

14

If the valve ports were left open when the explosions happened, the force would:

- ☐ partly go out of the valve ports
- ☐ only go on the top of the piston
- ☐ go out by the spark plugs

This would make the engine's power:

- ☐ great
- ☐ less
- ☐ the same

19028

14

partly go out of the valve ports

less

15

When the explosion takes place, parts inside the valve ports close the combustion chamber.

When this happens, all the power will:

- ☐ blow out of the valve ports
- ☐ push down on the top of the piston
- ☐ return to the spark plugs

19029

15

push down on the top of the piston

16

The parts in the valve ports that seal the combustion chamber are called _____.

19030

16

valves

17

The air-gasoline mixture enters the compression chamber through the intake port and the burned gases leave the combustion chamber through the _____ port.

19031

17

When the explosion in the combustion chamber takes place:

- ☐ both valves are closed
- ☐ both valves are open
- ☐ one valve is open

19035

A LIBERAL EDUCATION IN NONDESTRUCTIVE TESTING

How can you test the tank under pressure without blowing it to smithereens? How can you test all manner of items, fittings, instruments, and the like to the ultimate limits of what is required without destroying or damaging them? What can you do when nondestructive testing is a requirement of the contract?

What you can do is learn about nondestructive test techniques. These techniques are sometimes expensively learned, and very frequently hard to obtain—remember the Vanguard and the Tacoma Narrows Bridge.

NASA at Huntsville has attacked the problem of acquiring this knowledge and has assembled a series of 15 volumes. Each is described in the following abstracts, N68–28776 through N68–28790. They contain a mint of information covering the entire field of nondestructive test techniques. These books are much more than just an encyclopedia of the subject; in each of the special areas they can be your engineer's handbooks. They are written in a self-study, programed instruction format. Hard cover editions are $3 each, or $45 for the set. You can try them out, if you wish, in the low cost microfilm version at 65 cents apiece.

INTRODUCTION TO NONDESTRUCTIVE TESTING (N68–28776)

Meeting the entire subject for the first time, the reader finds that nondestructive testing can be best introduced by a discussion of those things for which tests are made. They are flaws, discontinuities and weaknesses that occur in welding, tubing, pipes, extruded materials, forgings, castings, seams, laminations, and the complete gamut of materials and processes that may create undesirable conditions. This report shows how these methods disclose conditions that otherwise might not be detected with destructive test techniques. A wide variety of metal and formed materials are discussed in terms o sources of flaws or discontinuities. The need fo and the value of nondestructive testing is made ev dent for all of the materials, machinings, and pro cesses discussed.

LIQUID PENETRANT TESTING (N68–28777)

This is the first of the volumes dealing with specific nondestructive testing technique. It disclose the discontinuities by using the Oil and Whitin method, by using various penetrant materials, an by wet and dry developers. The techniques used, th materials and equipment required, and the pro cedure are discussed fully. Inspection is presente carefully, with many notes on the limitations of liqui penetrant testing. A chapter covers the use of wate washables, emulsificants, and solvent-removabl penetrants, together with the washing and dryin processes needed.

MAGNETIC PARTICLE TESTING (N68–28778)

Both theory and practice of magnetic partic testing are covered thoroughly in the programed in struction in this volume. The technique, studyin the particle formation after magnetization, require complete demagnetization first. This and the theor of the test are fully explained. Then the variou techniques are described fully, including circul longitudinal fields, cables, prods, and yokes. Curren are covered by type and load requirements, an special emphasis is given to general safety in al pro cedures. Residual field inspection is discussed, as the set-up, equipment, and procedures for each the testing methods.

EDDY CURRENT, VOLUME 1: BASIC PRI CIPLES (N68–28779)

ONDESTRUCTIVE

for the first time, the tive testing can be best those things for which ws, discontinuities and welding, tubing, pipes, castings, seams, lami- amut of materials and undesirable conditions. methods disclose con- t not be detected with destructive test techniques. A wide variety of metals and formed materials are discussed in terms of sources of flaws or discontinuities. The need for and the value of nondestructive testing is made evident for all of the materials, machinings, and processes discussed.

LIQUID PENETRANT TESTING (N68–28777)

This is the first of the volumes dealing with a specific nondestructive testing technique. It discloses the discontinuities by using the Oil and Whiting method, by using various penetrant materials, and by wet and dry developers. The techniques used, the materials and equipment required, and the procedure are discussed fully. Inspection is presented carefully, with many notes on the limitations of liquid penetrant testing. A chapter covers the use of water washables, emulsificants, and solvent-removable penetrants, together with the washing and drying processes needed.

MAGNETIC PARTICLE TESTING (N68–28778)

Both theory and practice of magnetic particle testing are covered thoroughly in the programed instruction in this volume. The technique, studying the particle formation after magnetization, requires complete demagnetization first. This and the theory of the test are fully explained. Then the various techniques are described fully, including circular longitudinal fields, cables, prods, and yokes. Currents are covered by type and load requirements, and special emphasis is given to general safety in all procedures. Residual field inspection is discussed, as is the set-up, equipment, and procedures for each of the testing methods.

EDDY CURRENT. VOLUME 1: BASIC PRINCIPLES (N68–28779)

EDDY CURRENT. VOLUME 2: EQUIPMENT, METHODS, AND APPLICATIONS (N68–28780)

These two volumes, both programed texts, provide the reader with the theory, the state-of-the-art, and the practical know-how to develop expertise in performing eddy current test procedures. The first volume deals with the generation and distribution of eddy currents, their behavior and value to material testing, the relationship of magnetic and electrical effects to the eddy current, and electrical concepts required for such testing. Permeability, flux density, magnetizing force, saturation, and hysteresis are included, as are impedance testing, phase and modulation analysis.

Volume 2 discusses physical and electrical design of various coils in relation to electromagnetic testing systems. Encircling, inside, and surface coils are considered, and single, double, and differential arrangements noted. Impedance, reactance, and feedback controlled testing; vector point, ellipse, and linear time-base methods, and modulation analysis are treated under methods and indications for use of eddy currents. A chapter on applications reviews conductivity, permeability, discontinuity, and thickness testing.

TECH BRIEF 68–10257—INSPECTION CRITERIA ENSURE QUALITY CONTROL OF PARALLEL GAP SOLDERING

Firms engaged in parallel gap soldering of electrical connections will profit from NASA's investigation of process control and inspection criteria of all commercially used connectors. The recommendations, when followed, will improve production, reduce scrap, and minimize damage to other components. They cover technique, amount of solder, heat dwell time, and material preparation.

What is the job of the intake valve? _____

19048

34

It controls the flow of the fuel mixture into the combustion chamber.

35

What is the job of the exhaust valve? _____

19049

35

It controls the flow of burned gases from the combustion chamber.

36

In order for the greatest possible power to push down on the top of the piston, there should be:

- ☐ many openings around the parts
- ☐ no openings around the parts
- ☐ some small openings around the parts

19050

36

no openings around the parts

37

The parts that seal the space between the piston and the cylinder walls are the:

- ☐ piston bearings
- ☐ piston pins
- ☐ piston rings

19051

37

piston rings

38

Piston rings go around the piston.

This is to assure that there are no leaks between the piston and the:

- ☐ combustion chamber
- ☐ cylinder walls
- ☐ valve ports

19052

38

cylinder walls

39

In the same way that the space between the piston and the cylinder walls must be sealed, so the space between the valve and the cylinder block must be sealed also.

This is important because it keeps all the power from the explosions:

- ☐ pushing down on the top of the piston
- ☐ leaking past the valves
- ☐ leaking past the piston

19053

39

pushing down on the top of the piston

40

When the valves close, they sit on a part in the engine called the:

- ☐ valve guide
- ☐ valve seat
- ☐ valve spring

19054

40

valve seat

41

The valve seat has a surface that matches the edge of the valve.

When the valve closes, it rests on the seat.

This makes a seal between the cylinder block and the _____.

TECH BRIEF 68–10394—NONDESTRUCTIVE TESTING OF BRAZED ROCKET ENGINE COMPONENTS

Manufacturers who employ welding or brazing in the fabrication of components which must withstand temperature excesses, vacuums, or high pressures will be interested in this NASA compendium of nondestructive testing of welded or brazed joints. Carefully prepared, the report fully covers the radiographic, ultrasonic, thermographic, and leak test methods used to inspect and ensure the quality of welds and brazes. Well illustrated, the report covers the set-up, jigs, equipment, and procedures of the various tests and carefully defines the advantages and limitations of each technique.

For additional information, circle Key No. 4 on Reader Service Card.

MAGNETIC PARTICLE TESTING: CLASSROOM TRAINING MANUAL (N68–28789) ULTRASONIC TESTING: CLASSROOM TRAINING MANUAL (N68–28790)

Firms investing in these two unusual testing techniques may wish to train their personnel as a group before and during their on-the-job experiences with the new equipment. These two manuals are guides to the teachers and they presume only that they have already completed the programed instruction manuals (N68–28778 and N68–28781, 82, and 83). While essentially the same material is covered as in the parent volumes, these manuals will provide great support to the teacher in a class situation where the material can be more effectively presented than in programed instruction.

METHOD OF DETERMINING ELASTIC PROPERTIES OF A METAL SAMPLE (PAT. NO. 3,416, 365)

Metallurgical and material quality control laboratories have now available to them a system for nondestructive testing of the elastic properties of metal. The tests are both rapid and accurate and are not influenced by variations in the thickness of the metal. The test equipment also can be used to establish the effects upon elasticity of known impurities in the metal. Elasticity is measured by pulsed ultrasonic waves according to their time-of-passage through the sample material. The test equipment includes transmitter and heads, gating circuit, amplifiers, coincidence and pulse shaping circuits, a time-to-voltage converter, and a recording machine. As originally designed, the equipment was able to determine the presence of hydride in zirconium at levels of a few hundred parts per million. When parameters are established, similar detections can be made for other impurities in other metals.

Administering Office: Atomic Energy Commission, Assistant General Counsel for Patents, Washington, D.C. 20545.

ULTRASONICS. VOLUME 1: BASIC PRINCIPLES (N68–28781)

ULTRASONICS. VOLUME 2: EQUIPMENT (N68–28782)

ULTRASONICS. VOLUME 3: APPLICATIONS (N68–28783)

In recent years ultrasonic testing has received tremendous attention from NASA and Defense and its growth as a scientific test discipline has been astounding. Because of NASA's success, a plateau in ultrasonics has been reached. Now is an opportune time to survey all that has been done in all areas of ultrasonic testing. These three volumes completely cover today's abilities in this field.

ULTRASONICS. VOLUME 1: BASIC PRINCIPLES (N68–28781)

ULTRASONICS. VOLUME 2: EQUIPMENT (N68–28782)

ULTRASONICS. VOLUME 3: APPLICATIONS (N68–28783)

In recent years ultrasonic testing has received tremendous attention from NASA and Defense and its growth as a scientific test discipline has been astounding. Because of NASA's success, a plateau in ultrasonics has been reached. Now is an opportune time to survey all that has been done in all areas of ultrasonic testing. These three volumes completely cover today's abilities in this field.

The first volume defines how and why ultrasonics can work as a test and evaluation instrument. Various test systems, methods, techniques, and displays are covered under the general heading of transducers. The generation of ultrasonic sound, wave propagation and characteristics in different media, and resonance and harmonic frequencies are included. A chapter deals with pulse echo through transmission and resonance, contact and immersion testing, and A, B, C scans. Surface conditions, beam incidence, grain structure, porosity effects, discontinuity orientation, and angular discontinuities are also covered. It relates the technique to the tested materials and the information that can be gained from testing.

Test equipment and accessories used in ultrasonic testing are reviewed in the second volume. Piezoelectric materials for transducers as well as transducer sensitivity, resolution, size, and frequency are treated. Contact, immersion, and straight and angle beam transducers are discussed, as are water column, wheel-type, and double transducers. Acoustical lenses and collimators are mentioned, and couplants for connecting the transducer to the test surface are considered. Attention is given to standard reference and calibration blocks; the C-scan recorder, automatic scanning equipment, carriage, manipulator, and scan tube are covered. A chapter on generator/indicator equipment describes both the pulse echo/through transmission instruments, and the resonance instruments.

Procedures for the solution of test equipment, and methods and techniques for ultrasonic testing are detailed in this third volume. Advantages and limitations of ultrasonic testing as well as contact and immersion testing are considered. Pulse echo/through transmission testing, using both the contact and immersion methods, is described. Castings, forgings, bar stock, rolled sheet and plate, pipe and tubing, and welds are discussed in relation to the application of contact testing. Discontinuity evaluation, rolled sheet and plate, cylindrically shaped specimens, off-center scanning, welds, and bonded and honeycomb materials are treated in a chapter on the application of immersion testing. Resonance testing advantages and disadvantages are reviewed.

3. A

56

The piston is connected to the crankshaft by the:

- ☐ cams
- ☐ camshaft
- ☐ connecting rod

19070

56

connecting rod

57

In order for the fuel mixture to get into the combustion chamber, the intake valve must:

- ☐ open
- ☐ close

When explosions take place in the combustion chamber, both valves are:

- ☐ open
- ☐ closed

19071

57

open

closed

58

In order for the burned gases to get out of the combustion chamber, the exhaust valve must be:

- ☐ open
- ☐ closed

19072

58

open

59

The intake valve and the exhaust valve must work together with the piston so that they open and close at the right times.

This means that the valves and the pistons are:

- ☐ connected by some parts
- ☐ not connected by any parts

19073

59

connected by some parts

60

When explosions push down on the top of the piston, the piston and the connecting rod make which part turn?

- ☐ crankshaft
- ☐ valve guide
- ☐ valve seat

19074

TECH BRIEF 68–10004—DEVELOPMENT OF MECHANIZED ULTRASONIC SCANNING SYSTEM

A mechanized ultrasonic scanner that can inspect welds at speeds of more than 1 inch per second has been developed. It is available to firms whose weldments require more than radiographic inspection. The scanner incorporates a water-column probe which eliminates any need for submerging the weld or flushing the inspection surface. It also includes a recording system, the tooling needed to move the probe over the work surface, the probe which receives instructions and transmits data, and the flaw detection equipment and oscilloscope.

For additional information, circle Key No. 5 on Reader Service Card.

To order Clearinghouse reports (numbers prefixed AD, LA, PB, or N) and patents, list numbers on Reader Service Cards.

ULTRASONIC INSPECTION SYSTEM AND APPARATUS FOR RESISTANCE WELDS AND THE LIKE (PAT. NO. 3,384,733)

This equipment may fill a long-established need for on-the-line inspection of production welding which is nondestructive. Inspection and test of a weld is accomplished by spaced high-frequency pulses of ultrasonic energy which pass through the weld zone and are picked off by an electrode. They are processed for display on a cathode ray tube and then shown on the cathode ray screen, which may have marked out on it the acceptable limits of a good weld. Acceptance and rejection therefore does not require a skilled operator. Two ultrasonic transducers are mounted with the electrodes and test the weld almost immediately. Manufacturers of production welding equipment should not overlook the improvements inherent in this system.

Administering Office: Department of the Army, Office of the Judge Advocate General, Chief, Patents Division, Washington, D.C. 21315.

DEVELOPMENT OF THE ULTRASONIC DELTA TECHNIQUE FOR ALUMINUM WELDS AND MATERIALS (FINAL REPORT) (N69–14207)

Applications of ultrasonics to welds of aluminum and its alloys may be measurably improved through use of the delta arrangement. The technique is described in this report from the Research Division, Automation Industries, Inc., Boulder, Colo. Designed for use with automated equipment, and also applicable to nonautomated shops, the delta technique both improves and refines the ultrasonic testing of these materials.

TECH BRIEF 68–10115—METHOD FOR REINFORCING TUBING JOINTS

Of almost universal attractiveness is a NASA-developed technique for repairing leaks, especially in restricted areas, and reinforcing small tubing used in hydraulic and pneumatic systems. This method applies equally well to the tubing used in a wide variety of transfer systems such as fuel lines, refrigerant, and air conditioning systems. The technique involves a split, threaded aluminum shield fitting over the joint ferrule and adjacent tubing. Interior surfaces of the shield are coated with an epoxy resin to establish a tight bond between shield and tube. Open nuts are used to secure the shield in place. This technique may be used effectively and economically in a majority of industries.

TECH BRIEF 68-10134—SHALLOW GROOVES IN JOURNAL IMPROVE AIR BEARING PERFORMANCE

While air bearings see application with lightly-loaded rotors or journals, the operation is not stable as the rotor tends to precess and eventually to seize. The instability is self-excited, but NASA research has discovered that helical or herringbone grooves on the journal or rotor will dampen the tendency to instability and greatly improve the bearing performance. These shallow grooves act somewhat as air pumps and achieve a pressure distribution similar to that of a hydrostatic gas bearing. Tests at speeds over 60,000 r.p.m. have been run successfully. This type of bearing might be used in hand tools, machine tools, or other types of equipment to reduce friction.

For additional information, circle Key No. 7 on Reader Service Card.

MEASURING TOOLS AND DEVICES (NASA SP-5912(01))

Included in this publication are 13 abstracts of measuring devices, fixtures, tools, and accessories primarily for machine shops. Section 1, *Measuring Tools and Devices,* includes a gage which considerably increases the accuracy of flared tubing thickness readings, and a weld shrinkage gage for measuring shrinkage at circumferential ring weld joints of storage tanks. There is a clamp selector to wrap around tubing or wire harness to permit simultaneous determination of their diameters and clamp size which eliminates loose installation and related vibration; and a dimensional checking tool and fixture capable of fast, efficient, close tolerance checking of mass produced machined parts of two different lengths. Also included in this section are a layout tool, made from stock items, which accurately marks cone and cylindrical shaped thin sheet metal wo pieces without marring or bending them; an T-square location tool for marking layout dim sions on assembly workpieces in hard to reach ar There is also an optical fixture which permits curate alinement of equipment by rotating wi the circular opening of a large tank and locating exact center, allowing accessory equipment in around the tank to be alined with the center.

Section 2, *Measuring Systems and Fixtures,* cludes an automatic contour checking system usi microwave unit to provide quick and accurate r outs of any deviation from the nominal contou large tank bulkheads; a concentricity inspection ture that checks shaft journals, splines, pitch d eter of gears, and the taper of threads with minin setup time and effort; and a measuring fixture large, tape controlled boring mills which permit curate measurements during operations.

TECH BRIEF 68–10334—MICROPROBE INVESTIGATION OF BRITTLE SEGREGATES IN ALUMINUM MIG AND TIG WELDS

Welders of aluminum pieces who use MIG (Metal Inert Gas) or TIG (Tungsten Inert Gas) weld techniques will find their work may be substantially improved by the results of this microprobe investigation by NASA into the brittle segregates and intermetallic compound particles. The results indicate that there are about 10 different kinds of particles, corresponding to the 10 different (binary, tertiary, and quaternary) intermetallic compounds. Only in the MIG welds were binary $CuAl_2$ observed. Also, copper rich phases tended to be more frequently located in the MIG welds. Metastable ternary phases were found more frequently in the TIG weld. The differences between the MIG and TIG welds appear to be related to the individual cooling rates of these welds.

For additional information, circle Key No. 8 on Reader Service Card.

TECH BRIEF 68–10352—MACHINING TECHNIQUE PREVENTS UNDERCUTTING IN TENSILE SPECIMENS

Metallurgical laboratories and quality-control facilities can use this NASA-developed machining technique to provide a precise and standardized production of tensile test specimens. Equipment required is a milling machine with a contour-controlled vertical-travel table. NASA can provide full instructions on the tool set, the definition of the stylus and template, and the machining operation. This technique can both simplify and improve the validity of tensile test procedures, and insure that the test specimens will fail at the center of the reduced section.

For additional information, circle Key No. 9 on Reader Service Card.

A REVIEW OF METALLOGRAPHIC PREPARATION PROCEDURES FOR BERYLLIUM AND BERYLLUM ALLOYS (AD–674 066)

Battelle Memorial Institute, Metals Information Center, Columbus, Ohio, prepared a report on grinding, polishing, etching, and thinning for transmission electron microscopy. The results of this review of existing procedures are listed in tabular form for ready reference. A considerable amount of previously unpublished data has been included also which may interest metallurgical laboratories.

110

camshaft

111

The turning of the camshaft pushes up the valve lifter.

When this happens, the valve lifter lifts up the _____.

19125

111

valve

112

The job of the valve lifter is to:

- ☐ hold on to the valves
- ☐ lift up the valves
- ☐ push down on the valves

19126

112

lift up the valves

113

The valve lifters are between the _____ and the _____ .

19127

113

camshaft

valves

114

What do valve lifters do? _____

19128

114

They lift up the valves.

115

When the valve lifters are pushed up by the _____shaft_____, the valves will:

- ☐ open
- ☐ close

19129

115

camshaft

open

116

The valve lifters lift the valves up when the _____shaft_____ pushes the lifters up.

19130

116

camshaft

117

If the camshaft looked like the one above, then the valve lifters would not lift up the valves because the shaft is smooth and does not have bumps.

With a camshaft like the one above, the valves:

- ☐ could never open and close
- ☐ would open and close
- ☐ would still work

19131

117

would never open and close

118

A real camshaft has bumps on which the valve lifters ride.

These bumps are called _____ .

19132

118

cams

119

As the camshaft turns, the cams will push the valve lifters:

- ☐ up
- ☐ down
- ☐ to the side

19133

119

up

120

Cams are parts of the:

- ☐ camshaft,
- ☐ crankshaft
- ☐ driveshaft

A REVIEW OF METALLOGRAPHIC PREPARATION PROCEDURES FOR BERYLLIUM AND BERYLLUM ALLOYS (AD–674 066)

Battelle Memorial Institute, Metals Information Center, Columbus, Ohio, prepared a report on grinding, polishing, etching, and thinning for transmission electron microscopy. The results of this review of existing procedures are listed in tabular form for ready reference. A considerable amount of previously unpublished data has been included also which may interest metallurgical laboratories.

A METHOD OF MEASURING THE TENSIONS IN BOLTS (PB–178 739)

A method of measuring bolt tension has been developed in which the bolt is fitted with an internal rod which remains unstressed when the bolt is loaded by tightening the nut. As the bolt extends under load, relative movement occurs between the free end of the rod and a reference plane on the bolt head. This movement may be measured and related to bolt tension by calibrating the bolt against a suitable load cell. This method was developed by Road Research Laboratory, Crowthorne, England, and may be of interest to machine shops and testing laboratories.

FURTHER DEVELOPMENTS OF THE INVESTIGATIONS ON Al–Zn–Mg WELDABLE ALLOYS (AD–676 107)

Investigations were conducted by the Italian Metal Institute at Milan on four ternary alloys with Cr, Mn, and Zr additions. Two of the sample alloys were rolled and two were extruded. Complete experimental results are given and the conclusions are reported in the following relationships: (1) stress corrosion resistance to quench rate and heat treatment cycle; (2) ductility to quench rate, and (3) composition to fatigue strength. An explanation for the changes in stress-corrosion resistance and ductility is offered in terms of the precipitate distribution in the microstructure. Welding shops may find this report useful.

A LABORATORY METHOD OF MEASURING SLIP IN BOLTED CONNECTIONS (PB–179 704)

A gage designed to measure slip in bolted connections was developed which measures the movement and is unaffected by the strain induced in the plates by the applied load. The gage is applied as a unit, and avoids tedious setting-up procedures. It allows repeated measurements of movements to within 5 percent. The bolts tested were corrosion-resistant and have a high-strength friction grip. The report on this development by Road Research Laboratory, Crowthorne, England, will be of interest to manufacturers using bolted joints.

120

camshaft

121

The part of the camshaft that raises the valve lifter is called the _____ .

Which arrow is pointing to it?

lift

129

What do valve lifters do? _____

19143

129

They lift the valves off the valve seats.

130

When the camshaft turns the cam raises the valve _____ .

This will:

- ☐ open the valve
- ☐ close the valve

19144

TECH BRIEF 68–10002—GAGE MONITORS QUALITY OF CROSSWIRE RESISTANCE WELDS

Companies engaged in wire fabricating may find numerous applications for this gage which measures the relative embedment of the crosswires during the welding process. Before developing the gage, NASA studies had proved a direct relationship between embedment and both weld strength and consistency. The dial reading is a statement of displacement between the fixed and movable electrodes. During the weld, the movable tip is in contact with the workpiece and follows the depth of the embedment. The device can be modified to fit other types of welding heads, such as the press type which uses opposed electrodes.

For additional information, circle Key No. 10 on Reader Service Card.

TECH BRIEF 68–10242—WELDER ANALYZER

Manufacturers of welding equipment, as well as users of welders in production work, will be able to analyze and certify the performance of resistance welders. NASA has recently developed an analyzer circuit which can test the machine either on the job or with a precision shunt load for evaluation. Measurements include peak power, peak current, peak voltage, total energy, and first pulse energy. Of special importance, the analyzer can optimize performance in a production shop.

For additional information, circle Key No 11 on Reader Service Card.

METHOD AND STRUCTURE FOR TESTING THE WELDABILITY OF HIGH-STRENGTH STEELS (PAT. NO. 3,410,133)

Welding shops can improve their output by using this technique to detect steels which are prone to hot cracking in the welding process and to reject them before they produce much unsuitable work. In this test, a steel sample is placed in the test rack and a welding bead applied. Then, while it is still hot, the steel is subjected to controlled stresses that are much greater than any expected in normal service. Under this test, cracks, voids, and inclusions will become apparent if the steel is unsuitable. This applies not only in the weld deposit but also in the metal pieces that are being spanned by the weld material. Any welding shop which has either a requirement or a reputation for quality work will appreciate this rapid and inexpensive test technique.

ELECTRODE CENTERING MECHANISM FOR VACUUM ARC MELTING (PAT. NO. 3,391,239)

Metallurgical shops and laboratories which have the need to supply ingots of pure tungsten will appreciate a rod-centering device for the vacuum-arc furnace. This technique will improve the homogeneity of the ingot and reduce the risk of burn-through in the mold. The rods of sintered tungsten used as the source material are not perfectly shaped, therefore, some means is needed to keep the electrode end of the rod in perfect alinement with the mold without breaking the vacuum. This equipment accomplishes the centering with a pair of cam elements, one within the other, which allow the electrode to be moved transversely so that perfect centering may be had. The rod movements are controlled externally to the furnace in accordance with visual observations made through quartz windows. While this device has a limited use, it may well be valuable to those shops and companies needing these advantages.

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on the combustion cycle was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

Aeronautics and
General Counsel,

RADIOGRAPHY. VOLUME 1: ORIGIN AND NATURE OF RADIATION (N68–28784)

RADIOGRAPHY. VOLUME 2: RADIATION SAFETY (N68–28785)

RADIOGRAPHY. VOLUME 3: RADIOGRAPHIC EQUIPMENT (N68–28786)

RADIOGRAPHY. VOLUME 4: MAKING A RADIOGRAPH (N68–28787)

RADIOGRAPHY. VOLUME 5: FILM HANDLING AND PROCESSING (N68–28788)

These five volumes present a complete and detailed coverage of industrial radiography starting with the nature of gamma and X-radiation and continuing through test practices and film handling. Radiography is a technique of great value in testing. There are many important findings that can be determined in no other way. Any firm with a present or possible requirement for radiographic testing should obtain these volumes.

The origin and nature of X-radiation and gamma radiation are treated in the first volume. Atomic and mass numbers are discussed; and radioactive materials are treated under the general headings of isotopes, radioisotopes, decay, activity and specific activity, and half life. Electromagnetic spectrum, wavelength, frequency, energy, intensity, and photons are covered for both X-rays and gamma rays. Absorption and scattering are considered, including penetration, ionization, and photoelectric effect. Compton effect, bremsstrahlung, and half-value layer are included. Alpha, beta, and neutron radiation are also covered.

Overshadowing all others in importance is the second volume on safety. Because the hazard is great and never detectable without special equipment, this volume is mandatory reading before radiographic equipment is even unpacked. The contents of this book are directed to nondestructive test radiography users and the material is presented as programed instruction. The important areas of detection, dosage, and limits are explored thoroughly and one chapter is given to the effect of radiation on human tissue and life. Every available monitoring and metering device is described and correct operation is explained.

Basic theory of X-ray generation is considered in volume 3. A chapter dealing with the X-ray machine covers ratings, types, and selection of equipment; the X-ray tube and its cooling, anode and cathode, the duty cycle, and focal spot. Transformers, controls, tube current and voltages, grounding, and rectification are among the topics treated under power supplies. Isotope radiography, requirements, and equipment; energy and equivalent energy; and characteristics and merits of isotopes are described for gamma ray sources. A chapter on other facilities and equipment covers screens, film holders and cassettes, penetrometers, the step wedge, filter and collimator, and densitometers. Isotope source changing equipment and radiographic rooms are discussed. Attention is given to fluoroscopy, xeroradiography, flash radiography, stereoradiography, and microradiography.

Radiographic image formation, sensitivity, and exposure calculations are among the topics presented in volume 4. Mathematical formulas, charts, and graphs required by the radiographer are included in this volume. Specific attention is given to radiation quantity and intensity, exposure, X-ray and gamma ray reciprocity laws, inverse square law, film density and type versus exposure, and two types of film characteristic curves. Selection of radiographic sources and techniques are considered in detail. Step wedge analysis, latitude analysis, a two-film technique, and penetrometers and their placement are described.

Basic requirements of darkroom procedure, such as cleanliness, preparation for processing, and film handling are discussed in volume 5. The step-by-step procedure for manually developing, fixing, and finishing a film is treated in a general way. Chapters are devoted to both the properties of the radiographic film and the use of the processing chemicals.

To compress means to squeeze together. In the Compression Stroke the air-gasoline mixture is:

- ☐ exploded
- ☐ let out of the cylinder
- ☐ squeezed together in the cylinder

19182

TECH BRIEF 68–10146—LAMINATED SHEET COMPOSITES REINFORCED WITH MODULAR FILAMENT SHEET

NASA has developed an extremely simple method of producing these laminates by diffusion bonding and explosive bonding procedures. Laminated sheet, roll, or plate material made with reinforcing modular filament sheets is considerably less expensive to produce than the wire-enforced laminates. Further, it is superior in many applications, particularly those where compressive axial loads and hoop stresses are met. The filament laminates are easier to work with in flat plane applications and can accept conventional fastenings.

For additional information, circle Key No. 12 on Reader Service Card.

TECH BRIEF 68–10161—ROLL DIFFUSION BONDING OF TITANIUM ALLOY PANELS

NASA has reported fully upon the present state-of-the-art of roll diffusion bonding as it has applied to their efforts to fabricate T-stiffened panel assemblies. The results have value to any fabricator of integral construction who would value the weight/strength ratio of titanium alloys. The report discusses 12 major conclusions together with five obstacles that must be overcome before this process can become a standard production technique. Metallurgists and metal-fabricating shops may find this report useful.

For additional information, circle Key No. 13 on Reader Service Card.

DIFFUSION BONDING OF TITANIUM ALLOYS (AD–670 940)

Using Ti–6Al–4V, as a representative titanium alloy, Atomics International, Canoga Park, Calif., performed tests to determine shear, tensile, and bend strength of bonded joints for a wide range of bonding conditions. The tests indicated that the order of events in bonding are: (1) Surface contaminants diffuse into the bulk alloy leaving clean surfaces; (2) plastic flow occurs closing the voids at the bond line and brazing the surfaces of the joint into intimate contact; (3) the bond attains its final strength through nucleation and growth of grains across the bond interface. A number of specific conclusions emerged: (1) Shear tests coupled with metallographic examination give an effective index of bond quality; (2) ultra-high vacuum is not required to produce good bonds; (3) the strength of the diffusion bond approaches that of the parent metal; (4) the bonding process does not weaken the parent alloy; (5) the principal variables correlated with bond quality are time, surface finish, and permanent deformation, and (6) the relative independence of bond quality from pressure and temperature permits a wide choice of bonding conditions.

TECH BRIEF 68–10161—ROLL DIFFUSION BONDING OF TITANIUM ALLOY PANELS

NASA has reported fully upon the present state-of-the-art of roll diffusion bonding as it has applied to their efforts to fabricate T-stiffened panel assemblies. The results have value to any fabricator of integral construction who would value the weight/strength ratio of titanium alloys. The report discusses 12 major conclusions together with five obstacles that must be overcome before this process can become a standard production technique. Metallurgists and metal-fabricating shops may find this report useful.

For additional information, circle Key No. 13 on Reader Service Card.

DIFFUSION BONDING OF TITANIUM ALLOYS (AD–670 940)

Using Ti–6Al–4V, as a representative titanium alloy, Atomics International, Canoga Park, Calif., performed tests to determine shear, tensile, and bend strength of bonded joints for a wide range of bonding conditions. The tests indicated that the order of events in bonding are: (1) Surface contaminants diffuse into the bulk alloy leaving clean surfaces; (2) plastic flow occurs closing the voids at the bond line and brazing the surfaces of the joint into intimate contact; (3) the bond attains its final strength through nucleation and growth of grains across the bond interface. A number of specific conclusions emerged: (1) Shear tests coupled with metallographic examination give an effective index of bond quality; (2) ultra-high vacuum is not required to produce good bonds; (3) the strength of the diffusion bond approaches that of the parent metal; (4) the bonding process does not weaken the parent alloy; (5) the principal variables correlated with bond quality are time, surface finish, and permanent deformation, and (6) the relative independence of bond quality from pressure and temperature permits a wide choice of bonding conditions.

DIFFUSION BONDING OF TITANIUM ALLOYS (AD–670 941)

This report, by Atomics International, Canoga Park, Calif., further discusses methods and results of shear tests and metallography in addition to AD–670 940. Information is presented on the effects of finish and bonding time, the need to modify the bonding dies to eliminate radial constraint, and how shear test data can be fitted to a third order polynomial by means of a least squares program. This last item may be worked into the reliability figures of all firms using diffusion bonding. The report also contains data on diffusion of 15 elements in titanium including aluminum, vanadium, oxygen, nitrogen, and carbon.

POLYETHYLENE BONDING TO METAL FOR CABLE PENETRATION OF PRESSURE HULLS AND COMMUNICATIONS APPLICATIONS (AD–676 608)

Bonding polyethylene to all kinds of metals can create new and unexpected product possibilities. Using the process described in this report, low-cost polyethylene insulated, or jacketed, cables which are water resistant can be produced. This report was prepared by the United States Underseas Cable Corp., Washington, D.C.

The air-gasoline mixture comes into the cylinder through the _____ valve port.

19202

METHOD OF BRAZING ALUMINUM TO STAINLESS STEEL FOR HIGH-STRESS-FATIGUE APPLICATIONS (NASA SP–5040)

When dissimilar metals and alloys are used to fabricate a structure, various unfavorable reactions occur in joints between the metals. A prime example is the formation of intermetallic compounds which reduce the strength and ductility of the joint. The Rocketdyne Division of North American Aviation, Inc., developed for NASA a procedure for minimizing formation of these compounds in aluminum-stainless steel joints. The procedure has potential in fabricating transition joints in piping systems containing both materials and for tube-to-tube sheet joints where the tubes are of one material and the tube sheet of another. It also has potential in fabricating extended surfaces for heat exchangers where both stainless steel and aluminum are used, and in applying cladding to complex shapes. The process uses a coating of titanium on stainless steel to act as a diffusion barrier and to minimize compound formation. This technique has been successfully used in brazing other dissimilar metal joints, such as beryllium and stainless steel, copper and stainless steel, copper and alloy steel, columbium and stainless steel, molybdenum and graphite, and titanium with alloy steel. 1968. 11 pp. GPO $0.15.

ALUMINUM BRAZING (PAT. NO. 3,391,446)

Current techniques of bonding aluminum to other metals are quite satisfactory at low temperatures, but the bonds are mechanically weak and deteriorate in temperatures over 250° C. All plants and shops fabricating critical items which require aluminum brazing can profit from this new technique. The non-aluminum surface is coated with a rhodium film and then the aluminum body is brazed in place on the rhodium coating by conventional methods. The bond has already proven to be mechanically strong, less affected by time and temperature, and highly conductive both thermally and electrically. The employment of this technique in making a stacked ceramic-tungsten-aluminum thermoelectric generator suggests a number of possible electronic and semiconductive uses.

PORTABLE REMOTE INDUCTION BRAZING STATION WITH FLEXIBLE LEAD (PAT. NO. 3,403,240)

Conventional induction brazing equipment is bulky and ill-suited to portability to any degree, yet induction is far superior to torch brazing in quality and ease of joining. Induction brazing, for example, does not require the removal of all materials that might be ignited or damaged by a torch. The equipment solves the problems of supplying power to the brazer and water to be used as a coolant in a recirculating system. Developed for use in the interior construction of submarines, the equipment has genuine potential in many fields where torch welding and brazing are now used in spite of shortcomings, such as large refrigerant and conditioning systems, plant construction, silver, et cetera.

TECH BRIEF 68–10157—THERMAL RESISTANCES OF SOLDER-BOSS/POTTING COMPOUND COMBINATIONS

Engineers and designers of electronic cordwood modules will be able to apply the thermal resistance formulas developed by NASA when the work involves stacked modules over a heat sink. The heat transfer to the sink is highly important. The formulas in this study can materially simplify some knotty calculations and eliminate potentially serious errors. They can be used as a design tool to calculate the thermal resistances of the combinations for depths of solder bosses varying between 0.020 and 0.50 inch for the same or similar electronic applications.

For additional information, circle Key No. 14 on Reader Service Card.

SOLDERING NONMETALS TO METALS (PAT. NO. 3,391,447)

Many manufacturers may find both economy and improvement in an unusual technique of bonding a nonmetallic object to a metal surface. A paste of fine metallic silver and silver fluoride is applied to the nonmetalic surface which, after it dries, becomes silver subfluoride and on heating, a thin bonded layer of metallic silver. This can be easily soldered by a variety of standard techniques. The method works best with nonmetallic materials which contain metal or mineral salts. The technique is ideal when working with objects that must be formed of nonmetallic materials such as sodium chloride, bromide, quartz, baked clay, silica-based common glass, et cetera, which seriously limit the designer in fabrication methods. A solder bond is particularly desirable in the construction of certain instruments, for example, radiation sample cells.

RESISTANCE WELDING (PAT. NO. 3,415,977)

Fabricators of metal tubing may be able to employ this resistance welding technique to effect a positive seal in a length of tubing without severing or weakening the tubing. The electrodes serve as jaws to deform and flatten the tubing and then pass current to weld the walls of the tubing together. The technique adjusts the sealing pressure and the welding current to deal with different sizes of tubing and different wall thicknesses. This arrangement can form hermetic seals in any weldable metal tube.

Administering Office: Atomic Energy Commission, Assistant General Counsel for Patents, Washington, D.C. 20545.

WELDING BY HIGH-ENERGY STRESS FRONT (PAT. NO. 3,409,975)

This improvement in explosive welding processes removes the most common limitation in making a sound weld, oxide, and surface contamination. In this technique, the plates are tightly clamped together and a thin layer of explosive applied in such a fashion as to direct the resulting shock wave across the interface at a steep angle. The intensity of the shock wave creates considerable atom agitation on the interfacing plates and leads to a fusion weld. This technique could be useful in many areas of construction and service. It has limitations but its use in a large variety of spot welding operations has not been exploited.

EXPLOSIVE WELDING (PAT. NO. 3,417,455)

Explosive welding has seen little use in many areas of repair and construction work where such a technique would be valuable. The new technique, using standard detonators and C–3 plastic explosive, simplifies the welding by providing metal plates formed into a V-shape and faced with the explosive and buffer material. On detonation, the plates are forced towards each other at such velocity and under such pressure that the surfaces of the plates behave as a liquid and give a fusion welding of the parts. The development of techniques and expertise in this field might be a profitable enterprise. The materials require safety and handling precautions to be observed much as with blasting materials. This technique joins dissimilar metals by surface jet welding and permits in-the-field welding where conventional equipment is not available.

INFLUENCE OF PLASTIC DEFORMATION IN THE WELDING PROCESS ON THE STRENGTH OF WELDED JOINT CONNECTIONS (AD–673 412)

Potentially worthwhile improvements in the mechanical indices of welded joints in alloy steels are suggested by this study of the plastic deformation occurring in metals during the welding process. Careful investigation of the various common welds over a span of steel alloys seems to indicate that the plastic deformation can be turned to advantage by a welding processor who understands the deformation as it occurs. This study is a translation from Russian by Wright-Patterson AFB, Ohio.

ANALYSIS OF THERMAL STRESSES AND METAL MOVEMENT DURING WELDING (AD–676 830)

Studies at Marshall Space Flight Center on three-dimensional movement during welding of flat plate specimens are summarized in this report. The conclusions are that local metal movement apparently is caused by bending moment, and that general metal movement is caused by buckling. Welding operators may find this information useful. This report was prepared by Batelle Memorial Institute, Columbus, Ohio.

TECH BRIEF 68–10251—WELD MICROFISSURING IN INCONEL 718 MINIMIZED BY MINOR ELEMENTS

Welders of Inconel 718 can profit from NASA's research into the causes of microfissuring in the weld heat-affected areas. Past experience suggested that the microfissures were markedly influenced by trace elements. The addition of 20 p.p.m. of manganese and 25 p.p.m. of silicon greatly reduces microfissuring in Inconel 718. The addition of 20 p.p.m. of magnesium will significantly improve the standard alloy, except with electron-beam welding.

For additional information, circle Key No. 15 on Reader Service Card.

TECH BRIEF 68–10302—EFFECTS OF SURFACE PREPARATION ON QUALITY OF ALUMINUM ALLOY WELDMENTS

In research towards improving the quality of aluminum alloy welds, NASA has done a complete study on the effects of surface preparation on the weld, using aluminum alloy 2014 as the sample material. It was found that "as-machined" surfaces give the best welds and that all conventional surface cleanings, degreasings, rinsings, anodizings, and silicon coatings are highly detrimental to good work. Shops concerned with high-quality aluminum welds may be interested in this report.

For additional information, circle Key No. 16 on Reader Service Card.

TECH BRIEF 68–10383—EFFECTS OF HIGH FREQUENCY CURRENT IN WELDING ALUMINUM ALLOY 6061

Metal fabricators working with aluminum alloy 6061 have often seen cracking after tungsten inert gas (TIG) welding with a.c. current. To reduce the incidence of this defect, NASA has performed a careful study of the welding technique and has proven conclusively that uncontrolled high frequency current is the malefactor in the welding process. Of special importance is the set of tests which can help the fabricator to establish the limits and adjust the current for the best possible weld.

For additional information, circle Key No. 17 on Reader Service Card.

CAPACITOR DISCHARGE CIRCUIT FOR STARTING AND SUSTAINING A WELDING ARC (PAT. NO. 3,376,470)

Welding equipment manufacturers and welding shops doing inert gas atmosphere welding will be interested in this simple and reliable circuit. It can establish and maintain a d.c. arc for sufficient time to permit the normal power source to take over the voltage and current supply. The high voltage needed to establish the arc is not needed to maintain it and this device provides the surge by capacitor discharge. The circuit requires less power than is needed by presently available d.c. starters. It is inexpensive and rugged in design, and is connected in series with an inductor to the welding electrodes.

WELDING CORE FOR TUBES (PAT. NO. 3,411,688)

Makers of magnesium aluminum silicate ceramic materials may find a new source of activity in fabricating ceramic cores that may be used in welding tubes to a plate or container wall, as in a steam boiler. These cores or ferrules are sized to fit the piping and flanged to fit the plate or container wall. They simplify the welding process, making the weld more uniform, and do away with the need for after-drilling. After welding, the ceramic is shattered and removed. Ceramic cores can be produced at a moderate cost, thus providing economy in time and work, and an improved quality in the welding shop fabrication.

Administering Office: Department of the Navy, Patent Counsel, Washington, D.C. 20360.

TECH BRIEF 68–10041—IMPROVED TORCH INCREASES WELD QUALITY IN REFRACTORY METALS

In welding refractory materials, the normal commercial welding torches tend to degrade the weld atmosphere by contamination. NASA has developed a new torch that is impermeable and contributes almost no contamination to the weld box. The torch holds the welding cable inside a coolant chamber; the head rotates so that strain is avoided at the cable. This torch could become increasingly important as refractory materials see wider application.

1

Pistons, rings and valves are examples of parts that are lubricated by _____.

2

How does motor oil affect the heat of moving engine parts?

_____

3

Spaces between moving engine parts are sealed by _____ _____.

4

When large amounts of dirt, sludge and acids get into the motor oil, the motor oil should be _____.

5

When motor oil gets between two moving engine parts, we say that the parts are _____.

6-8

MATCH the following:

A. dust, carbon and bits of metal	1. _____ form(s) acids
B. unburned gasoline	2. _____ make(s) oil dirty
C. water	3. _____ make(s) oil weaker

9

Motor oil lets close-fitting moving parts:

- ☐ burn up
- ☐ slide more easily
- ☐ stick together

10

If a running engine had no motor oil, it would:

- ☐ burn out
- ☐ run cooler
- ☐ make no difference

1

PREVIEW

This section will tell you about lubricating oil, how it works and what it does.

TECH BRIEF 68–10022—MECHANICAL SHIELDING REDUCES WELD SURFACE CRACKING IN 6061 T6 ALUMINUM

Welders of aluminum 6061 T6 have experienced heat check cracking when working with high frequency AC tungsten arc equipment. NASA has developed a simple mechanical shield of high-melting-point material which protects the parent metal from the arc and eliminates heat check cracks. An 0.020-inch sheet of tungsten plate was used first in the tests, but other materials were also tried. Columbium No. 752 gave the best protection.

For additional information, circle Key No. 19 on Reader Service Card.

TECH BRIEF 68–10566—WELDING SKATE WITH COMPUTERIZED CONTROLS

Firms that have had problems in precision welding of contoured and double-contoured metal joints may be interested in a NASA-developed welding skate using computer controls. The computer is programed for TIG welding. On the basis of input information, it can compute the best torch angle and position both the torch and the cold-wire guide-angle manipulator. In addition, the optimum speed is computed and supplied through control of the welding skate motor speed. This management of the welding process is maintained without contact with the working surface by electrical, electromechanical, and photoelectric transducers which supply the desired inputs to the computer.

For additional information, circle Key No. 20 on Reader Service Card.

FASTENERS AND FASTENING TECHNIQUES (NASA SP–5906 (01) AND (02))

These two reports cover innovations in fastening devices and techniques developed by NASA and its contractors to solve fastening problems. Fasteners for sheet metal, plastics, wire, and cables are described. Clamp, clip, and strap devices include: a stop-clip fastener applicable to enclosures that must suppress both conducted and radiated radiofrequency energy, a device used to secure spliced sections of tubular containers, two types of cup-shaped washers which will prevent roll-pins from vibrating loose, and a thermal insulation clamp, among others. Also described are a new, quick-release fastener, and a simple self-locking device which is inexpensive and can be made of different materials. There are also protective fastening devices, such as a support and attach mechanism for mounting electrical equipment on inner or outer surfaces of cylinders, and a vibrator isolator assembly designed to minimize vibration when used with a gyroscope.

The second report describes such devices as: a simple countersunk screw holder to aid in installing wood screws in objects; a self-locking double-threaded nut and bolt; a simple spring-loaded rolling hinge; a technique for fastening display panel components which permits their removal without disconnecting attached wires, and a concept for a tamper-proof fastener and seal for packages consisting of a self-locking head, a plastic band, and a paper seal. All of the devices should be useful and practical. SP–5906(01). 1967. 14 pp. CFSTI $0.20. SP–5906(02). 1968. 6 pp. CFSTI $0.15.

Pistons and valves:

- ☐ rub against other parts
- ☐ do not rub against other parts

19282

5

very fast

rub against other parts

6

When fast-moving parts rub against each other, the parts wear out quickly and get very hot.

As a result, the engine will: (CHECK TWO CORRECT ANSWERS)

- ☐ burn out
- ☐ last a long time
- ☐ not last very long
- ☐ run cool

6

burn out

not last very long

7

The pictures show moving parts that are separated by a thin coat of _____ .

19284

7

oil

8

The oil used in an automobile is called MOTOR OIL.

Motor oil is a lubricant, that is, it makes surfaces slippery.

When motor oil gets between moving parts, they will:

- ☐ slide easily
- ☐ stick together

8

slide easily

9

Parts that fit closely together and rub against each other will get very hot.

The close-fitting moving parts in an engine are cooled by:

- ☐ air
- ☐ gasoline
- ☐ oil

9

oil

10

When moving parts rub against each other, they can get very:

- ☐ hot
- ☐ cold

Motor oil between moving parts makes the moving:

- ☐ easier
- ☐ more difficult

19287

TECH BRIEF 68–10091—AUTOMATIC CONTOUR WELDER INCORPORATES SPEED CONTROL SYSTEM

NASA has developed an electrical device than can ensure constant torch speed regardless of contours or other irregularities in shape. Production welders and welding shops already know how the quality of work improves when the torch is maintained at a constant speed. The innovation is in the motor-driven rate generator which is controlled by a separate feedback amplifier loop and the motor clutch-brake arrangement for controlling the electronic governor. Speed and contour are sensed by a speed pickup wheel and the information is translated into control data for the welder. The movement of the workpiece is adjusted automatically to maintain constant speed at the torch.

14

do not get too hot

slide easily

15

What is poured into an engine to lubricate the engine's moving parts? _____ _____

19292

15

motor oil

16

When close-fitting parts are covered with a coat of motor oil, the parts will move easily and will not burn up.

These parts are l_____ .

19293

16

lubricated

17

If engines were run without oil, the parts would get so hot that they would swell, tear bits of metal from each other, and then stick together.

Which picture above shows an engine that has been run without oil?

- ☐ picture A
- ☐ picture B

19294

17

picture A

18

Once the parts of an engine have become stuck or "welded" together the engine is burnt out.

An engine becomes burnt out usually because it has been run without:

- ☐ air
- ☐ gasoline
- ☐ oil

18

oil

19

Failure to use oil in an engine will cause moving parts to heat, swell, and then:

- ☐ slide over each other
- ☐ stick together

Once this happens, the engine has been b_____ out.

19

stick together

burnt (burned)

20

The picture shows the bearing that fits between the connecting rod and the crankshaft.

The surface of this bearing is very:

- ☐ rough
- ☐ smooth

20

smooth

21

The picture shows the surface of the crankshaft.

Is the surface of the crankshaft very smooth?

- ☐ yes
- ☐ no

21

yes

22

Engine parts can slide past each other more easily because they are very smooth.

They can slide very easily when they have a thin coat of

_____ _____.

19299

22

motor oil

23

Wear is caused when two moving parts:

- ☐ rub together
- ☐ stick together

19300

23

rub together

24

Putting a thin film of oil between moving parts will cause:

- ☐ more wear
- ☐ less wear

19301

TECH BRIEF 68–10522—METHOD FOR REMOVING SURFACE-DAMAGED LAYERS FROM NICKEL ALLOYS

Metalworking shops which use electrical discharge machining (EDM) have experienced problems with degradation of nickel alloys caused by the brittle layer of redeposited material on the machined surface. Serious losses in yield strength, ductility, and ultimate strength have been observed. Electropolishing of the completed work at room temperature in a water solution of sulphuric and phosphoric acids, with a current density of $5A/in^2$, has proven to be the best removal method. Abrasive grit blasting will remove the deposits but it causes a number of detrimental side-effects.

For additional information, circle Key No. 22 on Reader Service Card.

USE OF NUMERICALLY CONTROLLED MACHINE TOOLS IN RAE WORKSHOPS (AD–688 352)

Firms contemplating the purchase or installation of numerically controlled machine tool equipment will find interest in this carefully detailed report. It covers the use of such equipment in the workshops of Great Britain's Royal Artillery Establishment. The installation of this equipment was carefully planned in advance, yet the problems met were generally unforeseen. Their solutions may be as useful to the American businessman as to the British ordnance engineer.

METHOD FOR ELECTRODISCHARGE MACHINING (PAT. NO. 3,396,259)

Firms manufacturing or machine shops using electrodischarge machining (EDM) equipment may find the technique disclosed in this patent quite profitable. It has a mechanism at the cutting tool of the EDM equipment to vibrate the tool and impart high frequency, low-amplitude movement to the tool. The increased cutting rate resulting from this method was surprising, ranging from 900 to several thousand percent depending on the material. The equipment includes the necessary electronic circuitry to control the EDM operation plus a vibrator unit, together with the controls over amplitude and frequency. The tool wear rate on the cutting head is substantially reduced on materials like tantalum and stainless steel, but is slightly increased on the softer materials such as brass. This technique, then, increases the cutting rate and permits low-wear tools to be used which yield good machine stability.

less wear

25

You have learned that the space between the piston and the cylinder walls are sealed by _____ _____ .

19302

25

piston rings

26

Even though there are rings around pistons, some power can still blow past the rings instead of pushing down on the pistons.

In this way, the engine could:

- ☐ gain power
- ☐ lose power
- ☐ not have its power affected

26

lose power

27

Motor oil seals the rings so that no power is lost in the engine.

In which picture is there a sealed space between the piston rings and the cylinder walls?

- ☐ picture A
- ☐ picture B

19304

27

picture B

28

Motor oil in an engine: (CHECK ALL CORRECT ANSWERS)

- ☐ makes moving parts slide more easily
- ☐ makes moving parts stick together
- ☐ seals the spaces between moving parts
- ☐ stops parts from moving

28

makes moving parts slide more easily

seals the spaces between moving parts

29

Motor oil lubricates the rings in the piston.

If there is no oil in the ring grooves, the rings will:

- ☐ keep on working
- ☐ stick in the ring grooves or break
- ☐ shrink into the crankcase

29

stick in the ring grooves or break

30

Piston rings will stick in the ring grooves if:

- ☐ the engine is warm
- ☐ there is no oil in the ring grooves
- ☐ there is lots of oil in the ring grooves

19307

30

there is no oil in the ring grooves

31

If the engine is properly lubricated, exhaust gases cannot get into the crankcase. One reason for this is that:

- ☐ the rings are stuck in the ring grooves and help to seal the space between the piston and cylinder
- ☐ the rings are not stuck in the ring grooves; they are pushed out from the grooves and help to seal the space

19308

31

the rings are not stuck in the ring grooves; they are pushed out from the grooves and help to seal the space

32

In the picture above, exhaust gases cannot get into the crankcase, because the: (CHECK TWO)

- ☐ cylinder walls have a coat of oil
- ☐ cylinder walls do not have a coat of oil
- ☐ rings are stuck in the grooves
- ☐ rings are not stuck in the grooves

32

cylinder walls have a coat of oil

rings are not stuck in the grooves

33

BLOW-BY occurs when exhaust gases get past the piston into the crankcase.

Blow-by cannot happen if the space between the rings and the cylinder walls are sealed with _____ .

33

(motor) oil

34

Oil between the cylinder walls and the piston prevents:

- ☐ blow-by
- ☐ blowups
- ☐ explosions

USE OF NUMERICALLY CONTROLLED MACHINE TOOLS IN RAE WORKSHOPS (AD–688 352)

Firms contemplating the purchase or installation of numerically controlled machine tool equipment will find interest in this carefully detailed report. It covers the use of such equipment in the workshops of Great Britain's Royal Artillery Establishment. The installation of this equipment was carefully planned in advance, yet the problems met were generally unforeseen. Their solutions may be as useful to the American businessman as to the British ordnance engineer.

METHOD FOR ELECTRODISCHARGE MACHINING (PAT. NO. 3,396,259)

Firms manufacturing or machine shops using electrodischarge machining (EDM) equipment may find the technique disclosed in this patent quite profitable. It has a mechanism at the cutting tool of the EDM equipment to vibrate the tool and impart high frequency, low-amplitude movement to the tool. The increased cutting rate resulting from this method was surprising, ranging from 900 to several thousand percent depending on the material. The equipment includes the necessary electronic circuitry to control the EDM operation plus a vibrator unit, together with the controls over amplitude and frequency. The tool wear rate on the cutting head is substantially reduced on materials like tantalum and stainless steel, but is slightly increased on the softer materials such as brass. This technique, then, increases the cutting rate and permits low-wear tools to be used which yield good machine stability.

Administering Office: Atomic Energy Commission, Assistant General Counsel for Patents, Washington, D.C. 20545.

ROTARY DRILLING DEVICE (PAT. NO. 3,371,558)

Any machine shop with the need to do accurate drilling in sizes of 0.002- to 0.030-inch can use this rotary drill to improve the accuracy and speed of its work. This device has a novel method of mounting the bit to eliminate wobble or waver. The mounting holds the bit in the exact orientation desired by a friction grip. This permits higher speeds of rotation and lets the operator control advancement and retraction during drilling operations. Bit breakage and resulting work stoppage can be prevented. This drill allows the skilled operator a better chance to decide the condition of the bit by its performance. Manufacturers of components for instruments used in guided missiles, radar, aircraft, and timing devices may find this drill useful.

Administering Office: Atomic Energy Commission, Assistant General Counsel for Patents, Washington, D.C. 20545.

34

blow-by

35

Oil prevents blow-by.

To prevent blow-by, what must oil do to the space between the cylinder wall and the piston rings? _____

In the pictures above, which two metal blocks will take more power to move?

- ☐ A
- ☐ B

19313

273

36

B

37

Some engine power must be used to make the different parts of a car move. This power is wasted or "lost." Otherwise, it could be used to make the car go.

Oil reduces power loss by making it:

- ☐ easier for parts to move
- ☐ harder for parts to move

37

easier for parts to move

38

Power used just to make the parts of an engine move is wasted or lost.

If it is very hard to move engine parts:

- ☐ more power will be lost
- ☐ less power will be lost

38

more power will be lost

39

When a thin film of oil is placed between moving parts, these parts will move easily.

In this way, oil:

- ☐ adds to power loss
- ☐ reduces power loss

39

reduces power loss

40

When you rub your hands very fast and very hard against something, your hands will get:

- ☐ cool

TECH BRIEF 68–10055—THREAD CUTTING WITH THREE-AXIS N/C MILLING MACHINES

Shops with a three-axis N/C milling machine equipped to respond to the APT numerical control system can avail themselves of a special thread-cutting macro known as TAPDIE. This macro has been developed by NASA for cutting threads on oversize stock or on pieces which cannot be cut by conventional means. It is compatible with APT III Version 7 and is totally independent. The TAPDIE addendum to the APT encyclopedia contains instructions for using the macro, sample programs, and the punched card decks for the macro. TAPDIE will cut almost any type of thread.

For additional information, circle Key No. 23 on Reader Service Card.

TECH BRIEF 68–10318—COMPRESSIBLE SLEEVE PROVIDES AUTOMATIC CENTERING FOR GRINDING OR TURNING OF CYLINDERS

Most machine shops have experienced lost time in setting up a rough casting for grinding or turning. NASA has developed an elastomeric sleeve on a threaded mandrel that permits the machinist to set up a rough casting without delay. The mandrel can be secured by a collet or held between centers. The elastomer, as it is tightened up, yields to find the average inside diameter of the casting and the rough cast thicknesses become almost equal across the diameter. The equipment can be easily made and the elastomers molded without difficulty. The method was first used to grind hollow cylindrical magnets. Machine tool builders may find it useful for grinding spindle outside diameters concentric with the inside diameters.

43

It carries off heat.

44

What is added to an automobile engine to lubricate it?

_____ _____

19321

44

motor oil

45

Parts that are lubricated will:

- ☐ slide easily
- ☐ stick together
- ☐ wear fast
- ☐ wear slowly

19322

45

slide easily

wear slowly

46

How does motor oil affect the wear of engine parts?

_____

19323

46

It slows down wear or makes parts last longer.

47

Motor oil cuts down the loss of engine power by forming a _____ between the piston rings and the cylinder walls.

47

seal

48

What does motor oil do to the heat caused by engine parts rubbing together? _____

19325

48

Motor oil carries the heat away.

49

Motor oil seals the spaces between parts and carries off engine heat.

Another job that motor oil does is to:

- ☐ make parts stick together
- ☐ make parts slide more easily
- ☐ make parts fall apart

49

make parts slide more easily

50

The different jobs that motor oil does are to: (CHECK ALL CORRECT ANSWERS)

- ☐ carry off engine heat
- ☐ make parts slide easier
- ☐ stop engine movement
- ☐ seal spaces between close-fitting parts
- ☐ wear out engine parts

19327

50

carry off engine heat

make parts slide easier

seal spaces between close-fitting parts

51

New oil is clean oil.

When an engine has been running for a while, dirt, dust and tiny bits of metal will get into the oil.

When this happens, the oil is:

- ☐ clean
- ☐ dirty

51

dirty

52

Which picture shows motor oil with particles of dirt and dust in it?

- ☐ picture A
- ☐ picture B

52

picture A

53

Dust, carbon, and bits of metal can dirty oil. For this reason, oil should be changed often.

Changing the oil often keeps it:

- ☐ clean
- ☐ dirty

TECH BRIEF 68–10530—VERTICAL BORING MILL CAPACITY IS INCREASED

Operators of vertical boring mills whose nominal workpiece capacity is 27 feet may be able to use an in-shop NASA modification of the machine to permit 36-foot workpiece diameters. By adding extension saddles to the mill suport columns, the modification provides a wider traverse for the drillheads as well as a greater size of workpiece. The basic concepts might be applied to other types of machines which might benefit from this modification.

For additional information, circle Key No. 25 on Reader Service Card.

53

clean

54

If a carburetor does not work properly, unburned gases can get into the motor oil and make it weak.

If the oil gets too weak, it cannot do its job.

Should weak motor oil be changed?

- ☐ yes
- ☐ no

19331

54

yes

55

Dust, carbon, and bits of metal can dirty oil. For this reason, oil should be changed often.

Changing the oil often keeps it:

- ☐ clean
- ☐ dirty

55

clean

56

Motor oil should be changed when it gets too dirty.

Oil should be changed when: (CHECK ALL CORRECT ANSWERS)

- ☐ dirt gets into it
- ☐ dust gets into it
- ☐ metal particles get into it

56

dirt gets into it

dust gets into it

metal particles get into it

57

As dirt, dust and tiny metal particles collect in the engine, motor oil washes them away.

This keeps the engine:

- ☐ clean
- ☐ dirty

57

clean

58

Anything that enters the engine lubricating system besides motor oil will make the motor oil weak.

Weak motor oil is:

- ☐ bad for the engine
- ☐ good for the engine

19335

58

bad for the engine

59

Unburned gasoline can get into oil and make it:

- ☐ strong
- ☐ weak

19336

59

weak

60

Dust, carbon, and bits of metal make oil:

- ☐ clean
- ☐ dirty

19337

60

A METHOD OF GRINDING AND FINISHING DIAMOND CONES (AD–674 044)

The method described in this translated Russian report from Wright-Patterson AFB, Ohio, may interest diamond tool grinders. The diamond is rotated around an axis perpendicular to the plane of the grinding disc. This speeds up the machining and allows the finish to be more exact. The rotation specified is superposed on the conventional rotation of the diamond, *i.e.*, round the axis of the cone.

MACHINE TOOLS AND FIXTURES (NASA SP–5910(01))

This summary of selected novel machine tools and fixtures, and unusual uses for existing standard tools, includes four sections: (*1*) *Drilling Machine Fixtures and Adapters;* (*2*) *Engine Lathe Fixtures* (*3*) *Measurement and Layout Fixtures;* (*4*) *Milling Machine Fixtures and Adapters.* Included in section 1 are abstracts on a sensitive drilling feed attachment; improvement of drill press clamp; a post indexing fixture which saves considerable time in drilling complex hole patterns where interrelationship between holes is critical; and a pressure feed unit for a 90° drill which will result in less operator fatique, fewer broken bits, greater personal safety, higher quality work, and increased production. Section 2 deals with self-alining, tilting chuck jaws; honeycomb cylinder doming and facing machine, and a honeycomb cylinder planer. In section 3, the abstracts describe a gage block comparator, antifriction modification; precision angle grid plate; simple tool and procedure for laying out internal locations; and an alinement device for precision butt fitting. Abstracts included in section 4 are on a continuous feed milling fixture; vertical milling head adapter; collet adapter for Cincinnati dividing head; and a pneumatic machining fixture which extends drill travel. All the tools are believed to be useful and practical. 1968. 9 pp. CFSTI $0.20.

TECH BRIEF 68–10239—MANUAL OF INDUSTRIAL DIAMONDS PLUS DRESSING AND GRINDING CRITERIA FOR MACHINING SUPERALLOYS

Because there is no single source of information available about the selection and best use of diamond wheels, NASA has prepared and published a compendium of currently available information. The manual is accurate, extensive, and written for use by the machine shop. It covers every normal and many exceptional uses of the diamond wheel in shop production. Machine shops may find this publication extremely useful.

For additional information, circle Key No. 26 on Reader Service Card.

METHODS OF TREATMENT OF COMPLEX SURFACES ON METAL CUTTING MACHINES (CHAPTERS 1 AND 12) (AD–670 945)

This study of the best use of equipment in forming complex surfaces may be helpful to engineers concerned with machining and machine shops engaged in complex profile work. Attention is given to the formation of complicated surfaces and the analysis of motion that must be executed in the machine tools to produce such surfaces. Of particular interest are the methods by which both general purpose and special profiling lathes can be used for finishing such surfaces. The author has organized his material for easy adaptation into automated or mechanically controlled shop systems.

65

If oil is weak or dirty, what should be done to it? _____

19342

65

It should be changed.

66

When gasoline is burned in the combustion chamber, it forms water on the cylinder walls.

This water gets into the oil and forms acids that rust and corrode engine parts.

Acids:

- ☐ harm engine parts
- ☐ help engine parts

66

harm engine parts

67

A mechanic starts taking apart an engine.

He sees that some parts are rusted and corroded.

Therefore, he knows that the motor oil has been mixed with:

- ☐ unburned gasoline
- ☐ water

19344

67

water

68

When water mixes with oil, engine parts will rust and corrode because:

- ☐ acids were formed
- ☐ oil increases rust
- ☐ water cooled the engine

19345

68

acids were formed

69

MATCH the following:

A. form(s) acids

B. make(s) the oil dirty

C. make(s) the oil weaker

D. make(s) the oil stronger

1. _____ dust, carbon, bits of metal

2. _____ water

3. _____ unburned gasoline

19346

69

1. B

2. A

3. C

70

When water, dirt and oil get all churned up, they make a creamy, black "goo" that is called SLUDGE.

Besides sludge, what else does water cause in the oil?

_____

19347

70

water causes acids to form

71

Sludge and acids are caused by:

- ☐ oil in the crankcase
- ☐ water in the crankcase

19348

71

water in the crankcase

72

The creamy, black "goo" that forms in the crankcase is called:

- ☐ acid
- ☐ sludge
- ☐ varnish

What causes this "goo" to form? _____

72

sludge

water

73

When an automobile is driven at high speeds, the engine may get so hot that some oil is burned.

This burned oil forms a sticky gum called varnish that coats engine parts and clogs oil passages.

Varnish:

- ☐ harms engine parts
- ☐ helps engine parts

METHODS OF TREATMENT OF COMPLEX SURFACES ON METAL CUTTING MACHINES (CHAPTERS 1 AND 12) (AD–670 945)

This study of the best use of equipment in forming complex surfaces may be helpful to engineers concerned with machining and machine shops engaged in complex profile work. Attention is given to the formation of complicated surfaces and the analysis of motion that must be executed in the machine tools to produce such surfaces. Of particular interest are the methods by which both general purpose and special profiling lathes can be used for finishing such surfaces. The author has organized his material for easy adaptation into automated or mechanically controlled shop systems.

MACHINE TOOLS AND FIXTURES (NASA SP–5910(02))

All of the machine tools and fixtures developed by NASA and its contractors described in this report are believed to be useful and practical. This selection of 16 abstracts consists of a lathe staking tool used to crimp stainless steel over inserted bearings or sleeves, especially in limited space, without galling or peeling the staked metal; an offset countersinker with an adjustable stop which allows holes to be countersunk with precision, eliminating scrapped parts and rework; and a titanium router which can be applied to stainless steel and other materials. Included also are various fixtures that increase machining radii; permit multiple milling; allow thin gage plates to be held without embossing; arrest the movement of miniature bearing balls during assembly; hold recorder stylus heads for machining; and which quickly adapt a standard brake press into a tensile testing machine.

This collection also includes a mechanical seal that facilitates the proof pressure testing of liquid hydrogen insulation honeycomb test coupons; a pneumatic lifting device that permits accuracy and control in lifting the spindle of a gage block comparator so that only one reading need be taken; and an optical scope mounted on an SIP jig borer which permits a large number of accurately spaced holes to be drilled in printed circuit boards, and the like. The last three of the 16 abstracts include a nylon collet which can be used in almost any application requiring a tight grip on a small diameter rod without flexing splits; an extension shaft and plastic covered stabilizing handle which permits a rotary file to be placed wherever filing is required; and a small extension collet which has realized sizable savings in time and material in drilling small holes close to shoulder trunions or in the bottom of deep counterbores. 1968. 11 pp. CFSTI $0.20.

73

harms engine parts

74

Varnish is formed when:

- ☐ gasoline is burned
- ☐ oil is burned

19351

74

WHAT ABOUT MACHINE TOOL CHATTER?

American machine designers and tool machine operators have argued chatter from time to time, but there has not been any really firm work done about the problem, even to seeing whether it is a problem. Recently some German machine designers have taken a critical look at machine chatter. Five of their reports, plus a report of a similar but independent investigation of the same problem in England, are available to you. Machine tool shops, machine designers, and production machine shops will find material of interest, of use, and of value in these studies. Theoretical as these reports are, the results can point toward better work from your tool machines.

CHATTER BEHAVIOR OF HEAVY MACHINE TOOLS (AD–671 541)

The chatter behavior of a medium-sized vertical milling machine has been subjected to detailed investigation after careful preliminary research into the validity and reproducibility of the measured data concerning the machine. The first important result showed that the static and dynamic behavior of the machine cannot be accurately expressed in terms of medium values. Electromagnetic excitation was used for taking dynamic values at the spindle. This report relates the results of dynamic tests, and in particular demonstrates that dynamic behavior is seriously influenced by plate vibrations. Measurements of damping coefficients are discussed, together with the possibility of damping techniques.

CHATTER BEHAVIOR OF HEAVY MACHINE TOOLS (AD–671 542)

Continuing the investigations of the previous report (AD–671 541), a digital computer program is described that will allow exact analysis of the stability of the cutting process on the vertical milling machine. This technique applies six degrees of freedom in accounting for the coupling between vibration modes and cutting stiffness. Inde the program, tests on another mill proved the influence of machine posit critical depth of cut. This data was fed computed program to reduce the calcu tional determinations were made of natural frequencies, and mode shapes.

EFFECT AND CONTROL OF VIBRATIONS IN MACHINE TO ESSES (AD–671 543)

Having shown that a vertical milling systematic errors in frequency-respo ments caused by power and cross-powe report looks into the errors from e signals as they are introduced into the setup. It also examines the ways in w measurements can be used to compute responses. Improvements in wave-on operations are shown as strongly dep phase angle between the two contour and its resultant frequency response.

EFFECT AND CONTROL OF VIBRATIONS IN MACHINE TO ESSES (AD–671 544)

Continuing the studies on the vertic chine, this report covers the evaluatio mic test results. Compliance frequenc two degrees of freedom) are determin ing conditions for the machine. The developed random noise theory is ap variety of milling conditions, static feeds. The results are discussed in th which deal with the interdependence force components.

EFFECT AND CONTROL OF VIBRATIONS IN MACHINE TO ESSES (AD–671 549)

The previous four reports provide all the needed ingredients for a "cl

PREVIEW

This section will teach you how oil flows through the engine lubrication system and what the oil does inside the engine.

NO ANSWER NEEDED

GO ON TO NEXT PAGE

19365

1

NO ANSWER NEEDED

2

Oil does many important things inside an engine.

Oil carries dirt, dust and sludge to the crankcase.

One use of oil is to:

- ☐ clean engine parts
- ☐ make engine parts stick together

19366

2

clean engine parts

3

In addition to keeping engine parts clean, oil carries heat away from hot spots and keeps moving parts from sticking together.

CHECK the things oil does in the engine:

- ☐ cleans parts
- ☐ cools hot spots
- ☐ provides fuel
- ☐ lubricates parts

19367

3

cleans parts

cools hot spots

lubricates parts

4

By forming a seal between the piston and cylinder walls, oil prevents exhaust gases from escaping from the combustion chamber.

Which picture above shows exhaust gases escaping?

- ☐ picture A
- ☐ picture B

What is used to prevent this? _____

19368

4

picture B

oil

5

Oil works hard in a car. The oil between the piston and cylinder walls keeps hot gases in.

In this way, oil acts as a:

- ☐ coolant
- ☐ lubricant
- ☐ seal

Oil also carries heat away from the engine.

By doing this, it keeps the engine:

- ☐ clean
- ☐ cool
- ☐ tight

19369

5

seal

cool

6

Oil in the engine: (CHECK ALL CORRECT ANSWERS)

- ☐ cleans
- ☐ cools
- ☐ lubricates
- ☐ seals

Oil does:

- ☐ different jobs in the engine
- ☐ only one job in the engine

ct analysis of the
the vertical milling
six degrees of free-
ing between vibra-

tion modes and cutting stiffness. Independently of the program, tests on another milling machine proved the influence of machine position upon the critical depth of cut. This data was fed back into the computed program to reduce the calculations. Additional determinations were made of response loci, natural frequencies, and mode shapes.

EFFECT AND CONTROL OF CHATTER VIBRATIONS IN MACHINE TOOL PROCESSES (AD–671 543)

Having shown that a vertical milling machine has systematic errors in frequency-response measurements caused by power and cross-power spectra, this report looks into the errors from external noise signals as they are introduced into the measurement setup. It also examines the ways in which resulting measurements can be used to compute subfrequency responses. Improvements in wave-on-wave cutting operations are shown as strongly dependent on the phase angle between the two contours of the chip and its resultant frequency response.

EFFECT AND CONTROL OF CHATTER VIBRATIONS IN MACHINE TOOL PROCESSES (AD–671 544)

Continuing the studies on the vertical milling machine, this report covers the evaluation of the dynamic test results. Compliance frequencies (given for two degrees of freedom) are determined from working conditions for the machine. Then the already-developed random noise theory is applied under a variety of milling conditions, static preloads, and feeds. The results are discussed in theoretical terms which deal with the interdependence of the cutting force components.

EFFECT AND CONTROL OF CHATTER VIBRATIONS IN MACHINE TOOL PROCESSES (AD–671 549)

The previous four reports provide the reader with all the needed ingredients for a "classical" mathematical model of the medium-sized vertical milling machine whose performance has been measured with extreme accuracy over the normal mode of excitation. This report explains how the information can be transferred into the operation of another milling machine of similar design, synthesizing the mobility transfer functions for four pairs of positions. Measurements on the second mill are made by exciter and pickup devices and show fair correlation. This could be unusual considering the irregularities that may be expected between any two milling machines that have seen regular use.

The previous five reports are heavily theoretical but do point strongly to improved machine tool performance through the understanding and control of only a few conditions of the working environment. In addition to these reports, which were prepared in Germany using precision German milling machines, there is a more practical study done in England dealing with lathes.

CHATTER ANALYSIS OF MEDIUM-SIZE MACHINE TOOLS. VOLUME I. PRIMARY CHATTER OF LATHE TOOLS (AD–671 551)

This study begins with a standard work process, an orthogonal cut, which is considered without reference to chatter, regenerative effect, or mode coupling. With single-pass cutting, allowing the tool 1 degree of freedom, measurable instability occurred wherein chip thickness exceeded the critical depth of the cut. Then these measured conditions were used to establish a damping capacity and to control the directional variation of tool flexibility. Control over the total cutting force, as it applied to the direction of flexibility, was then easily determined and the results plotted. Plots of the work are given in terms of cutting energy, cutting speed, and the depth of the cut.

8

LOOK AT PANEL 1

The panel shows a lubrication system.

This system carries oil to the parts that:

- ☐ do not move and do not need lubrication
- ☐ move and need lubrication

19372

8

move and need lubrication

9

LOOK AT PANEL 1

The arrows show that oil:

- ☐ flows around in the engine
- ☐ stays in the bottom of the engine

19373

9

flows around in the engine

10

LOOK AT PANEL 1

Let's follow the path of the oil as it flows around the engine.

Oil starts out in the OIL PAN which is:

- ☐ at the top of the engine
- ☐ in the bottom of the engine

19874

10

in the bottom of the engine

11

LOOK AT PANEL 1

From the oil pan, oil goes first to the OIL INTAKE.

The oil intake:

- ☐ puts oil into the oil pan
- ☐ takes oil out of the oil pan
- ☐ takes oil out of the pump

19375

11

takes oil out of the oil pan

12

From the oil pan, the oil goes through the oil intake to the PUMP which:

- ☐ drains the oil out of the system
- ☐ pushes the oil around in the system
- ☐ takes the oil back to the oil pan

19376

12

pushes the oil around in the system

13

LOOK AT PANEL 1

LOOK AT PANEL 1

Oil flows from the filter to the crankshaft and camshaft by going through the _____ _____.

19380

What Does It Point To?

Possibly to greatly improved machine tools, and even more possibly to greatly improved tool operating conditions. The machine tool designer should have the entire package.

DETERMINATION AND ANALYSIS OF MACHINING COSTS AND PRODUCTION RATES USING COMPUTER TECHNIQUES (AD–675 340)

All metalworking companies will find this report by the Air Force Machinability Data Center, Cincinnati, Ohio, of interest and use. It presents equations for determining the cost per piece and production rate for machining operations such as turning, milling, drilling, reaming, and tapping. These equations require tool life data for the actual machining conditions to be used. A Fortran program for an IBM 1130 has been written to calculate and printout the cost per piece and the production rate for these operations. A detailed cost breakdown also is printed out to facilitate analysis of the total cost per piece. In addition, equations are developed for calculating the optimum cutting speeds and tool life corresponding to minimum costs and maximum production assuming that the tool life cutting speed follows the simplified Taylor equation. The optimized equations enable one to interpolate and extrapolate the cost and production determinations.

PLATE CUTTING APPARATUS (PAT. NO. 3,388,902)

This improved plate cutting apparatus has a high degree of versatility, adjustability, durability, and precision as compared to conventional devices. The cutting head can be easily positioned for cutting along straight and/or circular lines. The support structure for the cutter head may be rotated through 360°, and the head may be additionally moved in several different directions. The cutting machine is adapted for rolling along a track wherein the machine may be set for automatic operation and may be remotely controlled. The cutting apparatus also allows a number of cutting heads and machines

16

oil lines

17

The oil lines carry oil to different engine parts where the oil does which of the following jobs? (CHECK ALL CORRECT ANSWERS)

- ☐ cleans the parts
- ☐ cools hot spots
- ☐ provides fuel
- ☐ lubricates the parts

19381

17

cleans the parts

cools hot spots

lubricates the parts

18

After the oil has cooled, cleaned and lubricated the engine, it drips back into the oil pan. Then the trip starts all over again.

The next part of the program will tell you about some of the jobs oil does and the places it goes along the way.

NO ANSWER NEEDED

19

The oil pan is at the:

- ☐ bottom of the engine
- ☐ top of the engine

19383

19

bottom of the engine

20

Some oil moves around in the engine. The rest of the oil is at the bottom of the engine in the o_____ p_____.

19384

20

oil pan

21

The picture above shows a side view of the oil pan.

The bottom of the oil pan has:

- ☐ one level
- ☐ two levels
- ☐ three levels

19385

21

two levels

22

The lower level of the oil pan holds oil that is not moving through the engine.

In the picture below, DRAW an arrow to the level holding the oil that is not moving through the engine:

19386

22

23

The lower level of the oil pan is called the SUMP.

The sump holds oil that is:

- ☐ moving through the engine
- ☐ not moving through the engine

19387

23

not moving through the engine

24

At the bottom of the sump is a plug called the drain plug.

In the blanks below, WRITE the letter of the arrow that points to the part:

1. _____ drain plug

2. _____ sump

19388

24

1. C

2. B

cutting head can be easily positioned for cutting along straight and/or circular lines. The support structure for the cutter head may be rotated through 360°, and the head may be additionally moved in several different directions. The cutting machine is adapted for rolling along a track wherein the machine may be set for automatic operation and may be remotely controlled. The cutting apparatus also allows a number of cutting heads and machines to be used interchangeably with it. Any factory, shop, depot, or metal supplier faced with a requirement for exact cutting of metal plates may find this device quite helpful. It can cut other structures such as thrust and adapter rings, and motor heads for missile and rocket assemblies.

Administering Officer: Department of the Army, Office of the Judge Advocate General, Chief, Patents Division, Washington, D.C. 21315.

25

sump

26

To drain oil from the pan, the drain plug is opened.

In which picture above is the drain plug open?

- ☐ picture A
- ☐ picture B

19390

26

picture B

27

To remove oil from the oil pan, you must open the d_____ P_____.

19391

27

drain plug

28

In most oil pans, a steel plate is welded to the bottom. This plate prevents oil from splashing around in the sump.

In the picture below, CIRCLE the part that stops oil from splashing:

19392

28

29

The steel plate in the oil pan is called the BAFFLE.

The baffle:

- ☐ keeps oil from splashing around in the oil pan
- ☐ lets oil drain out of the sump
- ☐ splashes the oil around in the oil pan

19393

29

keeps oil from splashing around in the oil pan

30

If oil is allowed to splash around, it will foam up. To prevent this, oil pans have:

- ☐ baffles
- ☐ sumps

30

baffles

31

The sump, baffle and drain plug are all parts of the:

- ☐ oil pan
- ☐ oil pump

19395

31

oil pan

32

MATCH the following:

A. baffle
B. drain plug
C. main lines
D. sump

1. _____ hold(s) oil not in use
2. _____ is/are opened to let oil flow out
3. _____ prevent(s) oil from splashing and foaming

19396

32

1. D
2. B
3. A

33

The lower part of the oil pan is called the:

- ☐ baffle
- ☐ drain plug
- ☐ sump

19397

33

sump

34

Which of the following is welded to the oil pan to prevent oil from splashing and foaming?

- ☐ the baffle
- ☐ the drain plug
- ☐ the sump

19398

34

the baffle

35

The oil INTAKE takes oil:

- ☐ from the pump to the sump
- ☐ from the sump to the pump

METHOD FOR TREATING, WORKING, AND BONDING REFRACTORY METALS AND ALLOYS (PAT. NO. 3,416,342)

Metallurgical laboratories and shops working with refractory metals and alloys should give attention to this technique of cold working the refractory material while it is embedded in a titanium/nickel (Ti/Ni) matrix. The processing temperature is held above the recrystallization temperature of the refractory material. This method not only improves the processing and working of the refractory materials, but also provides an effective means of bonding and protecting them. After the work has been done on the refractory piece, the Ti/Ni matrix can be melted away at 1,310° C. The molten matrix leaves a thin Ti/Ni coating on the piece which serves as an excellent protective coating. This procedure may be used in forming a wide variety of sizes and shapes of refractory metals, *e.g.* tubing rods, strips, et cetera. It is also used in cold working refractory metals directly from the arc cast condition.

Administering Office: Department of the Navy, Patent Counsel, Washington, D.C. 20360.

NEW TECHNOLOGICAL PROCESSES IN THE PRESSURE TREATMENT OF METALS (AD–673 197)

This report is an edited translation by Wright-Patterson AFB, Ohio, of developments undertaken by the Aviation Technological Institute, Moscow. Some of the subjects covered are: the distribution of metallic mobility rates, deformation, and stresses along a billet cross section in rolling of aluminum alloys; the problem of anoxidative heating of billets in a protective atmosphere with lithium vapors; preparation of bimetallic rods and wires from aluminum alloys; the possibility of utilizing sodium stearate and its substitutes as technological lubricants in the extrusion of light alloys; die casting of thin-walled parts from molten metal; development of production technology and investigation of the physico-mechanical properties of thin sheets of magnesium alloys; investigation of bonding conditions during the joint plastic deformation of alloys of the duralumin type with alloys of the system AlMg; improvement of contact spot welding of D16 alloy sheets by cladding with AMg alloy; electron-microscope method of investigating SAP using carbon replicas; cladding SAP; methods of increasing the weight of blanks for rolling SAP sheet; strength of clad SAP sheet; comparative evaluation of the weldability of clad and nonclad SAP by resistance welding methods; technology for spot and roller welding of clad SAP; structural changes during heating of SAP; the problem of the character of distribution of the oxide phase in SAP.

ESTABLISHING THE TECHNIQUES OF PRESSURE WORKING OF NEW METALS AND ALLOYS (AD–674 912)

Extensive research was conducted before techniques of hot and cold working of new metals and alloys were developed. A report on the type of research and some results of it are in this translation of a Russian report from Wright-Patterson AFB, Ohio. One development is a process for manufacturing 30–50 microns thick vacuum-sintered tungsten-powder foil and strips. The report will be of interest to metalworking shops which forge and roll the new high-temperature, high-strength, and corrosion-resistant metals and alloys. For example, the effects of force parameters; plasticity and its dependence on temperature, deformation rate, structural transformations, and stressed state; and the kinematics of change in shape are described.

METALLOGRAPHY AND METALS TESTING TECHNIQUES (NASA SP–5911(01))

METALLOGRAPHY AND METALS TESTING TECHNIQUES (NASA SP–5911(01))

This publication presents a selection of 14 innovations developed by NASA and its contractors. The collection is offered in the hope that industrial concerns may find useful some of the implements and techniques described. Section 1, *Stress-Corrosion and Tensile Testing*, includes seven abstracts: a U-shaped frame for stress corrosion testing of metal samples which eliminates the nonuniform bonding characteristics of former wedge-type designs; and various fixtures which can be used on practically any bonded or brazed tensile testing machine that permits dumbbell specimens to be attached to pull rods and base plates of tensile testing machines. One on biaxially stressing metal tube specimens prior to performing stress corrosion tests on them; and to hold a tensile specimen of sheet material in a constant strained position while it undergoes stress-relaxation tests in a furnace. The collection also includes a device for conducting tensile tests under special environments, particularly potentially dangerous atmospheres; and a planimeter to measure the cross section reduction-of-area of a broken tensile specimen after tensile test.

Section 2 on *Metallography* includes seven abstracts covering a more reliable and less-time-consuming method to differentiate between microfissures and heavy grain boundaries in welded Inconel 718; techniques for preparing metallographic samples of tantalum and its alloys, tungsten and its alloys, vanadium alloys, Inconel X718 and X750, pyrolytic graphite foil, and for the 300 series stainless steel. 1968. 9 pp. CFSTI $0.20.

INCREASING THE TOUGHNESS OF AFC 77 BY CONTROL OF RETAINED AUSTENITE CONTENT, AUSFORMING, AND STRAIN AGING (AD–675 668)

Metallurgists and shops using martensitic stainless steel (AFC 77) may be interested in this report by Boeing Co., Renton, Wash. It describes the following three methods of improving toughness without loss of strength in the steel: (1) control of retained austenite content, (2) strain aging, and (3) ausforming. AFC 77 is subject to low fracture toughness in its highest strength conditions produced by tempering at 800° F. to 1,100° F.

45

A

46

19419

The following abstracts describe fixtures, devices, tools, and accessories which were developed to solve specific technical problems in the Government. These problems demanded innovations which were subsequently designed, developed, tested, and produced, in-house or with industry. The resulting products successfully met existing work requirements.

These selections are brought to your attention because the products may have commercial and industrial potential for metalworking businesses.

A market survey or analysis generally goes hand-in-hand with the introduction of a new product on the market. If help is needed in this area, the Small Business Administration has pertinent assistance programs and can provide counseling and literature, if desired. Please see list of SBA field offices, inside back cover, for office nearest you.

TECH BRIEF 68–10135—ANTECHAMBER FACILITATES LOADING AND UNLOADING OF VACUUM FURNACES

More efficient use of vacuum furnaces, freeze chambers, freeze driers, hot presses, and chemical reactors can be realized by using a NASA-designed antechamber for vacuum furnaces which can be easily adapted to other uses. The chamber holds a vacuum to 10^{-6} torr and allows the furnace to be loaded and unloaded without exposing its contents to air. Toxic materials can be transferred into and out of the furnace without exposing operators to contamination hazards. The antechamber also allows the furnace to be operated to the fullest degree, and protects all air-sensitive materials during the transfer process. The antechamber has glove ports, an access door, back-filling ability, and a motor-driven platform. Such an antechamber may be useful in conjunction with many types of pressure, vacuum, or controlled-atmosphere chambers.

72

The picture above shows that there are holes drilled in the crankshaft.

Oil flows:

- ☐ around these holes
- ☐ through these holes

19436

72

through these holes

73

The heavy arrow shows oil going into the:

- ☐ connecting rod bearing
- ☐ main bearing

19437

73

main bearing

74

The dotted lines show holes that go through the crankshaft.

The main bearing and the connecting rod bearing:

- ☐ are not part of the crankshaft
- ☐ are part of the crankshaft

74

are part of the crankshaft

75

Which bearing gets the oil first? _____ _____

19439

INTRAVENOUS INFUSION BOTTLE HOLDER (PAT. NO. 3,395,882)

Manufacturers of medical and laboratory supplies may find a new product in this simple, reliable, and rugged infusion bottle holder. Designed for use under emergency circumstances, such as ambulances and casualty evacuation aircraft, this holder greatly reduces the possibility of accidental breakage. Allowing easy view of the infusion bottle and its contents, it also permits medical personnel to rapidly determine that the right rate of flow is occurring. The holder wraps around the infusion bottle and snaps into a closed position. It can be made from any of a number of materials without expensive fabrication.

Administering Office: Department of the Air Force, Office of the Judge Advocate General, Chief, Patents Branch, Washington, D.C. 20333.

75

the main bearing

76

Oil flows from the main bearing to the connecting rod bearings by going through holes in the _____.

19440

76

crankshaft

77

The correct order of oil flow is:

- ☐ main bearing → main line → connecting rod bearing
- ☐ connecting rod bearing → main bearing → main line
- ☐ main line → main bearing → connecting rod bearing

19441

77

main line ⟶ main bearing ⟶
connecting rod bearing

78

The picture above shows oil entering a hole drilled in the connecting rod. Oil entering the connecting rod comes from the:

- ☐ crankshaft
- ☐ main oil line

19442

78

crankshaft

79

The connecting rod is connected to the:

- ☐ cylinder wall
- ☐ piston
- ☐ piston pin

19443

79

piston pin

80

When oil comes up the connecting rod, it lubricates:

- ☐ only the piston pin
- ☐ only the cylinder wall
- ☐ both the piston pin and the cylinder wall

19444

80

both the piston pin and the cylinder wall

81

Most connecting rods have a hole in their side called a "spit" hole. As the crankshaft turns, oil is forced out of this hole in a fine spray.

The picture above shows that this oil spray lubricates the:

- ☐ walls of the cylinder
- ☐ piston

19445

81

walls of the cylinder

82

The oil from the connecting rod spit hole lubricates both the cylinder walls and the _____.

19446

82

cam

83

The picture above shows that the cam bearings are lubricated by lines drilled in the block.

These lines also carry oil to the:

- ☐ connecting rod bearings
- ☐ crankshaft bearings

19447

83

crankshaft bearings

84

The picture above shows that the timing gears are lubricated by oil from the:

- ☐ camshaft bearing
- ☐ crankshaft bearing

19448

84

camshaft bearing

85

The picture above shows that once oil has been used to lubricate the timing gears, it flows back to the _____.

19449

ued)

INTRAVENOUS INFUSION BOTTLE HOLDER (PAT. NO. 3,395,882)

Manufacturers of medical and laboratory supplies may find a new product in this simple, reliable, and rugged infusion bottle holder. Designed for use under emergency circumstances, such as ambulances and casualty evacuation aircraft, this holder greatly reduces the possibility of accidental breakage. Allowing easy view of the infusion bottle and its contents, it also permits medical personnel to rapidly determine that the right rate of flow is occurring. The holder wraps around the infusion bottle and snaps into a closed position. It can be made from any of a number of materials without expensive fabrication.

Administering Office: Department of the Air Force, Office of the Judge Advocate General, Chief, Patents Branch, Washington, D.C. 20333.

VARIABLE PITCH BRACKET (PAT. NO. 3,392,951)

This device was developed as a camera holder for an astronaut in orbit to take pictures at different angles. Because astronauts are kept busy and work in confined quarters, the instrument should require as little work and operational time as possible and require minimum storage space. This bracket, manually operated and locked into place by spring loaded latches, meets such requirements. A hand operated handle rotates the plates more or less than an angle of 90°. The handle has a finger operated button which releases a pair of pawls that hold the shaft in place to automatically fold the base plates into a compact assembly by spring action. This bracket will be of interest and use to manufacturers and users of fixtures, tripods, weld positioners, sensors, detectors, photograph equipment and accessories, and the like.

Administering Office: Department of the Navy, Patent Counsel, Washington, D.C. 20360.

the rocker arm

the valve guide

94

The picture above shows that oil returns to the:

- ☐ oil lines
- ☐ oil sump

TECH BRIEF 68–10250—QUICK-ATTACH CLAMP

A fast-acting, positive, sliding-jaw cable clamp has been devised by NASA that can be used by every manufacturer of cable and rope equipment and by every industry and trade using cables, halyards, or lines. This new clamp can be easily triggered by a flip action and remotely triggered with little additional trouble, needing only an extra line. In the case of heavy, moving cable, this new clamp is both safer and less awkward than presently available clamps. It is faster and at least as positive in its action in all other applications.

For additional information, circle Key No. 29 on Reader Service Card.

94

oil sump

95

The oil that drops into the sump comes from the connecting rod bearing and the p_____.

19459

95

piston

96

After oil returns to the sump it:

- ☐ flows out through the drain plug
- ☐ re-enters the oil intake

19460

96

re-enters the oil intake

97

Once the oil re-enters the oil intake, it is:

- ☐ thrown away
- ☐ used again

19461

97

used again

98

The serviceman is:

- ☐ right
- ☐ wrong

98

wrong (The oil is put back into the engine.)

99

After oil goes through the lubricating system, it: (CHECK TWO)

- ☐ flows into the sump
- ☐ flows onto the ground
- ☐ is thrown away
- ☐ is used again

10463

99

flows into the sump

is used again

100

What is pouring into the sump through the OIL INLET? _____

19464

100

oil

101

In the picture above, oil is being poured into the engine. The oil enters the engine through the:

- ☐ dipstick
- ☐ oil inlet

19465

101

oil inlet

102

When oil is poured into the oil inlet, it flows into the:

- ☐ dipstick
- ☐ main oil lines
- ☐ sump

19466

102

sump

103

The long metal rod below the oil inlet is called a dipstick.

The DIPSTICK is:

- ☐ entirely in the oil
- ☐ partly in the oil
- ☐ totally out of the oil

19467

103

partly in the oil

104

The dipstick measures how much oil there is in the engine.
It measures the oil level in the:

- ☐ cylinder
- ☐ oil pump
- ☐ sump

FEEDBACK DIVIDER FOR FLUID AMPLIFIER (PAT. NO. 3,397,713)

Manufacturers of fluidic devices may find considerable improvement in their product with the inclusion of this feedback divider. It will improve stability, implant reliability to the memory functions, and assist in boundary layer lock-on. The divider will also reduce the counterflow or even eliminate it in some functions. It also maintains momentum in the feedback flow so that there will be no interruption in its value as a control signal. The combined advantages of this innovation should measurably improve the performance of any system in which this fluid amplifier can work. The design functions equally well with liquids or gases and can be made of any material compatible with the fluid used.

Administrative Office: Department of the Army, Office of the Judge Advocate General, Chief, Patents Division, Washington, D.C. 21315.

104

sump

105

The dipstick shows the oil level in the sump.

CROSS OUT the dipstick that shows a full sump:

19469

105

106

In the picture above, the dipstick shows that the engine is:

- ☐ full of oil
- ☐ low on oil

19470

106

low on oil

107

MATCH the following:

A. dipstick

B. oil inlet

C. sump

1. _____ lets oil into the engine

2. _____ shows amount of oil in the engine

19471

2. _____ filters oil going to the sump

3. _____ filters oil going to the pump

19478

TECH BRIEF 68–10037—SWING ARM CARRIER PROTECTS FLEXIBLE LINES DURING TEST ITEM ROTATION

A five-gate swing arm carrier has been developed by NASA to protect the flexible lines, tubing, and cables connected to the test turntable to supply the item under test. The swing arm easily accepts arcs of +180° to –180°, keeps the line lengths to an absolute minimum, reduces the bends to one common centerline, and requires very little time for set-up and disassembly. Firms which perform turntable test procedures should consider this device and the ways in which it can be easily adapted to their particular test problems.

TECH BRIEF 68–10266—SHOCK-ABSORBING CASTER WHEEL IS SIMPLE AND COMPACT

Manufacturers of home appliances, garage, and mobile shop equipment may find great interest in a shock-absorbing wheel-and-tire arrangement which NASA has developed for use as a caster. Using an elastomeric tire reenforced by a T-ring, the wheel takes up impact force by compressing the tire into an air cavity under it. Elastomers are available in many hardnesses to handle many loads and impact characteristics. The wheel eliminates any need for springs, Belleville washers, and other items for shock absorption. In tests, these caster wheels satisfactorily absorbed the shock from a 12-inch free fall of a dolly and its contents onto a hard surface.

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on oil changes was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

1

An engine's motor oil can be changed according to a car manufacturer's recommendations when driving conditions are _____.

2-4

Which of the following are considered perfect driving conditions?

- ☐ city driving
- ☐ cross-country trips
- ☐ stop-and-go traffic
- ☐ summer driving
- ☐ higher speeds for long distances

5-7

CHECK the parts below that affect the amount of time between oil changes:

- ☐ the crankcase ventilator
- ☐ the crankshaft
- ☐ the oil filter
- ☐ the oil vent
- ☐ the oil pump

8

If a customer's car is driven under perfect driving conditions, how often should he change the oil? _____

9

The extreme heat of summer and the extreme frost of winter are:

- ☐ good for motor oil
- ☐ bad for motor oil

10

A customer uses his car for local stops in the city. Should he change his motor oil very often?

- ☐ yes
- ☐ no

11

A customer just came back from a winter trip to Alaska. What should you recommend for his car? _____

Name _____

Date _____

Starting time _____

Finishing time _____

TECH BRIEF 68–10549—HIGH-TORQUE PRECISION STEPPING DRIVE

Laboratories and shops which require objects, such as antennas, optical units, and instruments, to be precisely positioned about a horizontal axis will be able to use this stepping drive mechanism developed by NASA for accurate transmission measurements. The tooth cut on the outer gear determines the increments. They provide precise 2-degree positionings which are locked in by plungers cut to mesh exactly with the gear teeth. Rotation of the cam drive will lock and unlock the plungers and advance the base by the desired angular amount. This design might also be applied to rotary tables and fixtures used in positioning parts for machining.

For additional information, circle Key No. 33 on Reader Service Card.

TECH BRIEF 68–10359—REMOTELY OPERATED GRIPPER PROVIDES VERTICAL CONTROL ROD MOVEMENT

Designers and manufacturers of automated production equipment may find use in a remotely operated gripper whose movement provides a vertical control function. Its primary function is to effect engagement between a drive shaft and the control rod by remote actuation of the gripper shaft. The secondary function is remote indication of the positive completion of the gripping or ungripping operation. Originally designed to operate in an atomic reactor, the gripper might be simplified for reliable use in overhead material handling systems, transport systems requiring remote control of the hook, and as a pickup and release device on helicopters.

For additional information, circle Key No. 32 on Reader Service Card.

1

NO ANSWER NEEDED

2

The best driving conditions for operating a car are long trips at high and steady speeds in warm weather.

CHECK the conditions that are not the best driving conditions:

- ☐ city driving and short trips
- ☐ cross-country trips
- ☐ driving on parkways
- ☐ stop and go traffic
- ☐ winter frosts

19500

2

city driving and short trips

stop and go traffic

winter frosts

3

This scene shows perfect driving conditions because:

- ☐ it's snowing
- ☐ it's summertime
- ☐ the car is going at a high speed
- ☐ the car is traveling on a highway
- ☐ the car is tied up in city traffic

19501

3

it's summertime

the car is going at a high speed

the car is traveling on a highway

4

What is the perfect season for driving? _____

19502

4

summer

5

At what kind of speeds is it best to drive a car? _____

19503

5

high (speeds)

6

It is better for a car to be driven on:

- ☐ city streets
- ☐ highways

19504

6

highways

7

At what kind of speeds do cars operate best? _____

19505

7

high speeds

8

Where is most stop-and-go driving done?

- ☐ on the highways
- ☐ in city traffic

19506

8

in city traffic

9

Perfect driving conditions are warm weather, high speed and long distance.

Which one of the places below has the poorest driving conditions?

- ☐ a Florida city
- ☐ a Florida highway
- ☐ an Alaskan city
- ☐ an Alaskan highway

19507

9

an Alaskan city

10

When dirt, dust, carbon, and bits of metal build up in the engine's motor oil, they are trapped by the oil filter.

Which of the following parts keeps the oil clean?

- ☐ oil filter
- ☐ oil pan
- ☐ oil plug

19508

TECH BRIEF 68–10359—REMOTELY OPERATED GRIPPER PROVIDES VERTICAL CONTROL ROD MOVEMENT

Designers and manufacturers of automated production equipment may find use in a remotely operated gripper whose movement provides a vertical control function. Its primary function is to effect engagement between a drive shaft and the control rod by remote actuation of the gripper shaft. The secondary function is remote indication of the positive completion of the gripping or ungripping operation. Originally designed to operate in an atomic reactor, the gripper might be simplified for reliable use in overhead material handling systems, transport systems requiring remote control of the hook, and as a pickup and release device on helicopters.

12

picture A

13

The condition of the car is improved by having the oil filter:

- ☐ clogged
- ☐ working

19511

13

working

14

Oil works best under perfect driving conditions.

Oil does its best job when you drive:

- ☐ long distances at fairly high and steady speeds
- ☐ short distances in which there is a lot of stopping and starting

14

long distances at fairly high and steady speeds

15

This is a picture of the crankcase ventilation system.

The BREATHER CAP lets:

- ☐ air in
- ☐ oil out
- ☐ air out

15

air in

16

This is a diagram of a crankcase ventilation system.

Air enters the crankcase through the:

- ☐ breather cap
- ☐ crankcase vent

19514

16

breather cap

17

The crankcase VENT lets:

- ☐ air in
- ☐ air out
- ☐ oil in
- ☐ oil out

19515

17

air out

18

Air leaves the crankcase through the crankcase _____.

19516

18

vent

19

When water and gasoline get into the crankcase, they are turned to vapor. This vapor escapes through the crankcase vent.

In which picture above is the vapor escaping?

- ☐ picture A
- ☐ picture B

19517

19

picture A

20

In the picture above, the crankcase vent is clogged.

Can gasoline and water vapor escape?

- ☐ yes
- ☐ no

TECH BRIEF 68–10512—BOYDBOLT, A POSITIVE-LATCH, SIMPLE-RELEASE FASTENER

The Boydbolt, a newly designed NASA fastener, will hold under extremely high dynamic preloads and yet can be freed with very little effort. Many equipment manufacturers may find the Boydbolt ideal in its ease of use, security from accidental locking and releasing, and overall strength. The fastener may be useful as a coupling device in any number of commercial products. The Boydbolt can be made in a variety of lengths and diameters, and its large-scale manufacture should present no problems to a well-equipped machine shop.

For additional information, circle Key No. 34 on Reader Service Card.

RECEPTACLE

TECH BRIEF 68–10261—DYNAMIC-RESERVOIR LUBRICATING DEVICE

This lubricating device, which meters the flow of lubricant according to the angular velocity of the rotating element, is now available as a result of NASA research. It will operate equally well with inner-race and outer-race running bearings. It insures lubrication without introducing friction, as with wicks, and without wasting oil, as with some drip feeds. This oiler should be interesting to the makers of machine tools and a wide variety of industrial equipment and heavy-duty driven machinery manufacturers. The oiler ensures the optimum supply of lubricant for the maximum operating life of the bearing.

For additional information, circle Key No. 35 on Reader Service Card.

20

no

21

Oil works best if the car is in perfect condition. It will not work very well if the: (CHECK ONE OR MORE)

- ☐ crankcase vent is clogged
- ☐ crankcase vent is working
- ☐ oil filter is clogged
- ☐ oil filter is working

19519

21

crankcase vent is clogged

oil filter is clogged

22

To keep the car in perfect driving condition, the oil filter and c _____ vent should be working.

In addition, the car should be driven:

- ☐ at fairly high speeds
- ☐ at fairly low speeds
- ☐ for long distances
- ☐ for short distances

22

crankcase

at fairly high speeds

for long distances

23

After a few hundred miles, dust and bits of metal get into the oil and make it:

- ☐ cool
- ☐ dirty
- ☐ lubricate better

19521

23

dirty

24

If it rains very hard, or the car goes through a river, acids and sludge form in the oil.

What causes the acids and sludge to form?

- ☐ dirt
- ☐ gasoline
- ☐ water

29

warm

30

Engines need time to warm up.

An engine will be warmer in:

- ☐ long-distance driving
- ☐ stop-and-start driving

19528

30

long-distance driving

31

Most short-distance driving is done in the city. In this kind of driving the driver does:

- ☐ a lot of stopping and starting
- ☐ little stopping and starting

Under these conditions, will the engine have time to warm up properly?

- ☐ yes
- ☐ no

19529

31

a lot of stopping and starting

no

32

When the engine is cold, water forms on the cylinder walls. This water gets into the oil and forms sludge.

Which driving condition will cause the most sludge?

- ☐ using the car for many very short trips
- ☐ cross-country traveling
- ☐ using the car for vacation trips

32

using the car for many very short trips

33

When too much sludge, dirt and acid accumulate in the motor oil, the motor oil should be drained and fresh oil added to the engine.

The oil should be:

- ☐ changed
- ☐ kept
- ☐ re-used

19531

33

changed

34

Motor oil should be changed when:

- ☐ it gets dirty
- ☐ it stays in the automobile
- ☐ sludge and acids accumulate
- ☐ it is still clean

34

it gets dirty

sludge and acids accumulate

35

When the conditions for driving are perfect, an engine's motor oil will last for a long time.

CHECK the conditions under which oil will <u>not</u> last for a very long time:

- ☐ a clogged crankcase vent
- ☐ an oil filter filled with sludge
- ☐ highway driving
- ☐ stop-and-go city driving
- ☐ using a car only during the summer

35

a clogged crankcase vent

an oil filter filled with sludge

stop-and-go city driving

36

An engine's motor oil can be used for a long time when the:

- ☐ crankcase vent and oil breather are clean
- ☐ car is used for long-distance driving
- ☐ car is used for short trips in the city
- ☐ car is driven in warm weather
- ☐ car is driven in the winter time

19534

36

crankcase vent and oil breather are clean

car is used for long-distance driving

car is driven in warm weather

37

Which of the following are considered perfect driving conditions?

- ☐ driving in warm weather
- ☐ driving in cold weather
- ☐ long-distance driving
- ☐ stop-and-go driving
- ☐ a clean oil filter, crankcase vent and oil breather
- ☐ a clogged oil filter, crankcase vent and oil breather

37

driving in warm weather

long-distance driving

a clean oil filter, crankcase vent and oil breather

38

Since perfect driving conditions mean few oil changes, motor oil should be changed often when:

- ☐ the car is used in city traffic
- ☐ the crankcase vent and oil breather are working properly
- ☐ using the car for lots of highway driving
- ☐ the oil filter is clogged
- ☐ using the car during the winter

19536

38

the car is used in city traffic

the oil filter is clogged

using the car during the winter

39

MATCH the following:

A. perfect driving conditions

B. poor driving conditions

1. _____ city driving
2. _____ highway driving
3. _____ summer road conditions
4. _____ winter road conditions

19537

TECH BRIEF 68–10371—VERSATILE IMPACT HANDTOOL

When an extremely powerful impact is needed from a handtool for driving, punching, hammering, or shearing, this cartridge-actuated tool developed by NASA may provide an ideal answer. Equipped with easily interchangeable attachments for the four functions, the tool is hand held. Cartridges are fed into the tool from a magazine to allow rapid repetition when needed. An I-clamp locks the tool to the work surface to reduce recoil, and the impact power can be adjusted within limits. The tool could be very useful in the construction and renovation trades, and in the maintenance departments of most plants.

41

Most automobile manufacturers recommend that the oil be changed every 2000 miles depending on driving conditions.

If a person changes his oil every 2000 miles, is he following manufacturers' recommendations?

- ☐ yes
- ☐ no

19539

41

yes

42

BOB

JOE

Who changes his oil more often?

- ☐ Bob
- ☐ Joe

Automobile manufacturers recommend changing your oil every:

- ☐ 2000 miles
- ☐ 500 to 1000 miles
- ☐ 10,000 miles

19540

42

Joe

2000 miles

43

After 2,000 miles, it is recommended that your oil be _____.

19541

43

changed

44

How often you change your motor oil depends on:

- ☐ driving conditions
- ☐ life of the car
- ☐ wear on the filter

19542

44

driving conditions

45

When driving conditions are perfect, motor oil can be changed every:

- ☐ 200 miles
- ☐ 2,000 miles
- ☐ 20,000 miles

19543

45

2,000 miles

46

Frequent oil changes are necessary when driving conditions are:

- ☐ perfect
- ☐ poor

19544

47

2,000 miles

48

Car manufacturers' recommendations for changing oil should be followed when driving conditions are:

- ☐ perfect
- ☐ poor

19546

48

perfect

49

When a car is driven at fairly high speeds for long distances and during warm weather, the oil needs to be changed less often.

This is because these driving conditions are:

- ☐ perfect
- ☐ poor

19547

BRIEF 68–10371—VERSATILE IM- HANDTOOL

n an extremely powerful impact is needed handtool for driving, punching, hammering, ring, this cartridge-actuated tool developed SA may provide an ideal answer. Equipped sily interchangeable attachments for the four ns, the tool is hand held. Cartridges are fed tool from a magazine to allow rapid repeti- en needed. An I-clamp locks the tool to the rface to reduce recoil, and the impact power adjusted within limits. The tool could be seful in the construction and renovation and in the maintenance departments of most

ditional information, circle Key No. 36 on Service Card.

To order Clearinghouse reports (numbers prefixed AD, LA, PB, or N) and patents, list numbers on Reader Service Cards.

METHOD OF MAKING HEAT EXCHANGERS (PAT. NO. 3,340,588)

Manufacturers concerned with heat exchangers either as a primary product or as a component of other equipment will be interested in this novel method of making a spiral heat exchanger. The elements of the heat exchanger, especially unusually large units, are first assembled in proper relative proportions and then the unit is fed into a brazing furnace of ordinary size. After the brazing operation is completed the unit is wound in a spiral form to any desired size. The fluid coolant carrying tube has corrugated fins brazed on both sides. Filler blocks are inserted in alternate recesses to prevent collapse of the fin members. Separating strips prevent meshing of fins of adjacent spirals. The simple construction and efficient operation of this heat exchanger will appeal to many users, especially in the chemical and food-processing fields.

Administering Office: Department of the Air Force, Office of the Judge Advocate General, Chief, Patents Branch, Washington, D.C. 20333.

49

perfect

50

Perfect driving conditions are those in which the weather is warm, you drive long distances, and you travel at fairly high speeds.

Are driving conditions better during summer or winter?

- ☐ summer
- ☐ winter

Driving conditions are better:

- ☐ in city traffic
- ☐ on the highways

19548

50

summer

on the highways

51

If a car stops and starts often and needs frequent oil changes, it is being operated under conditions that are:

- ☐ perfect for driving
- ☐ poor for driving

The oil should be changed:

- ☐ every 2,000 miles
- ☐ more often than every 2,000 miles

19549

51

poor for driving

more often than every 2,000 miles

52

Driving conditions and the CONDITION OF THE CAR will affect the same thing.

The condition of the car will determine:

- ☐ changing weather
- ☐ how often you change the oil
- ☐ the condition of the roads

19550

52

how often you change the oil

53

Driving conditions affect how often you must change oil.

What other condition will also determine how often the oil must be changed?

- ☐ the condition of the car
- ☐ the condition of the driver
- ☐ the condition of the steering system

19551

53

the condition of the car

54

To get rid of dirt, dust, and sludge, the oil should be _____ regularly.

19552

54

changed

55

People who do a lot of short-distance, stop-and-start driving should change their car's oil:

- ☐ more often
- ☐ less often

This is because short-distance, stop-and-start driving does not give the engine a chance to:

- ☐ cool off
- ☐ warm up

19553

55

more often

warm up

56

The serviceman suggested frequent oil changes because the customer's car is used for:

- ☐ city stop-and-go driving
- ☐ long-distance highway driving

19554

56

city stop-and-go driving

57

Any extreme temperature is bad for running an automobile.

Which of the following are extreme temperatures?

- ☐ high summer heat
- ☐ mild spring weather
- ☐ severe winter frost

19555

57

high summer heat

severe winter frost

58

If the engine gets too hot, the oil will become so thin that it will be unable to protect engine parts.

Which picture above shows oil that is too hot?

- ☐ picture A
- ☐ picture B

19556

58

picture B

59

Oil tends to thin more during the:

- ☐ extreme heat of summer
- ☐ extreme cold of winter

19557

TECH BRIEF 68–10370—WATER-COOLED MOUNT FOR MINIATURE PRESSURE TRANSDUCERS

Pressure measurements taken from hot enclosures, such as ovens and furnaces, can be facilitated by a water-cooled mounting for miniature pressure transducers. For the first time it was possible to measure the pressure fluctuations in an axial-flow engine compressor. The mounting has already been used by NASA in a variety of installations where gas temperatures exceeded 1,000° F. Performance was rated excellent and the responses taken covered several hundred Hertz. The mount can be fabricated and assembled by any well-equipped laboratory with shop facilities available, or by a machine shop.

For additional information, circle Key No. 37 on Reader Service Card.

RESILIENT MOUNT FOR RACK PANEL-TYPE ELECTRICAL CONNE (PAT. NO. 3,363,218)

Resilient mountings for drawer, rack, a connectors have caused trouble in the pas alinement, open connections, and by need plexity in design and maintenance. This nique provides a resilient mount for c subject to impact as might come from slidi ming, pushing, and other motions common t rack, or panel installations. The mount as combining of the telescoping connector elen will be complete until definite actions to the connectors are made. The mount is si signed and easily manufactured; it needs maintenance. The patent should be attracti equipment manufacturers for garage, han gine test racks, and other areas where int able electronic units get rough handlin normal operations.

Administering Office: Department of th Office of the Judge Advocate General, Chie Division, Washington, D.C. 21315.

59

extreme heat of summer

60

The oil film on engine parts, such as the piston, valves, and cylinder walls, will burn if the engine is run when it is too:

- ☐ hot
- ☐ cold

19558

60

hot

61

Burnt oil collecting in the crankcase forms harmful gums and varnish that coat engine parts and clog oil passages.

If a car is run during the extreme heat of summer:

- ☐ more oil will be burned
- ☐ less oil will be burned

61

more oil will be burned

62

Engines run during extremely hot weather should have their oil changed:

- ☐ more often
- ☐ less often

19560

62

more often

63

If a car is run during dusty weather, some of the dust will get into the oil. To prevent this dust from clogging the oil filter, the oil should be

_____.

19561

63

changed

64

Should the oil be changed after a car is driven across the Arizona desert?

- ☐ yes
- ☐ no

19562

64

yes

65

In dusty weather, oil should be changed more often because the oil filter may get _____.

19563

65

clogged

66

What gets clogged in dusty weather? _____

19564

66

the oil filter

67

When oil filters become clogged, they should be:

- ☐ by-passed to avoid filtering
- ☐ ignored for oil filters are a nuisance
- ☐ replaced with a clean oil filter

67

replaced with a clean oil filter

68

During extremely cold weather the engine does not have time to warm up. Water gets into the oil and forms acids and sludge.

Under these conditions the oil should be changed:

- ☐ more often
- ☐ less often

19566

68

more often

69

Oil should be changed more often if the car is driven in: (CHECK ONE OR MORE)

- ☐ extremely cold weather
- ☐ extremely hot weather
- ☐ warm, but not hot, weather

Should the oil be changed if the car is driven in a dust storm?

- ☐ yes
- ☐ no

TECH BRIEF 68-10575—HOISTING FRAME FACILITATES HANDLING OF LARGE OBJECTS

Plants and shops without overhead cranes may easily solve the problem of moving large, bulky objects by using a hoisting frame and a standard 5-ton forklift. Developed by NASA for moving 33-foot spreaders, the hoist rig has a counterweight on the long end of its boom that accepts the twin forks of the forklift. Raising the fork lowers the lift end of the boom; the load is secured by a chain and hook and is lifted when the fork is lowered. Movement of the load is then a simple matter, done speedily and with no need for further equipment.

For additional information, circle Key No. 38 on Reader Service Card.

RESILIENT MOUNT FOR RACK AND PANEL-TYPE ELECTRICAL CONNECTORS (PAT. NO. 3,363,218)

Resilient mountings for drawer, rack, and panel connectors have caused trouble in the past by misalinement, open connections, and by needless complexity in design and maintenance. This new technique provides a resilient mount for connectors subject to impact as might come from sliding, slamming, pushing, and other motions common to drawer, rack, or panel installations. The mount assures the combining of the telescoping connector elements and will be complete until definite actions to disengage the connectors are made. The mount is simply designed and easily manufactured; it needs little in maintenance. The patent should be attractive to test equipment manufacturers for garage, hangars, engine test racks, and other areas where interchangeable electronic units get rough handling during normal operations.

Administering Office: Department of the Army, Office of the Judge Advocate General, Chief, Patents Division, Washington, D.C. 21315.

69

extremely cold weather

extremely hot weather

condition of the car

driving conditions

79

Motor oil should be changed _____ often when the car is used for city driving.

19577

DEVICE FOR TAKING FLUID SAMPLES FROM CLOSED SYSTEMS (PAT. NO. 3,412,613)

Chemical laboratories, the chemical and pharmaceutical industry, and a variety of other manufacturers may find great value in this newly designed probe to be used for pulling liquid samples from sealed containers or systems without any danger of contaminating. As with other devices of this kind, a sealing block or plug of special design must already be installed in the system of the container. Such a block permits passages to be made and resealed after use. It also affords the passage of a long probe-like device for collecting the fluid sample from any depth inside the container or system. The block has the means to reseal the passage once the probe has been withdrawn. This device can be easily connected into existing vacuum or purging systems. It also can be easily modified to meet the requirements of specific listing conditions and goals.

Administering Office: Department of the Interior, The Solicitor, Patents Branch, Washington, D.C. 20242.

TECH BRIEF 68–10387—MINIATURE PAINT-SPRAY GUN FOR RECESSED AREAS

Standard commercial paint-spray equipment cannot do an acceptable job when used in recesses or other hard-to-get-into areas. NASA has developed a miniature spray gun for paint and other liquids which is hand held and has individual controls for regulating air pressure and fluid flow. The small spray head can be extended 13 inches, rotated 360°, and very easily cleaned and maintained. The spray nozzle can work as close as ½-inch from the surface without overspray to other areas. This miniature paint-spray gun should find applications in almost any manufacturing shop.

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on the use of lubrication charts was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 023-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

TECH BRIEF 68–10550—CONTACT-SPRING FORMING MACHINE FOR FLAT CONDUCTOR CABLE RECEPTACLES

Makers of contact springs, spring clips, and similar small parts may find profitable use for a NASA-developed machine tool designed to form copper-beryllium contact springs for flat conductor cables. The machine receives stock, forms, and ejects finished springs at a rate of 1 per second. Operating with a four-step punch-and-die cycle, the machine is simple and inexpensive. It is also able to accept many small modifications in its cycle to permit production of a wide span of three-step and four-step small parts.

For additional information, circle Key No. 40 on Reader Service Card.

Contact Spring

1

NO ANSWER NEEDED

2

Every make of car must be serviced:

- ☐ a different way
- ☐ the same way

19597

2

a different way

3

Should you service a Chevrolet the same way as you would a Ford?

☐ yes

☐ no

19598

3

no

4

A Dodge might be serviced the same way as:

- ☐ a Chrysler
- ☐ a Plymouth
- ☐ another Dodge

19599

4

another Dodge

5

Since there are so many different makes of cars, the serviceman must use a SERVICE MANUAL to do work on them.

What would you find in the service manual?

- ☐ automobile needs
- ☐ manuals
- ☐ servicemen

19600

5

automobile needs

6

The best way for the serviceman to become familiar with the ways in which the different makes of cars are serviced is to:

- ☐ ask the customer
- ☐ refer to a service manual
- ☐ trust his luck

19601

6

refer to a service manual

7

This book tells you how each car should be serviced:

Look in the lubrication service guide when you:

- ☐ do a front end alignment
- ☐ change the oil in a car
- ☐ clean the windshield

19602

7

change the oil in a car

8

A lubrication service manual tells you how to:

- ☐ do a lube job
- ☐ repair an automobile engine
- ☐ service a brake system

19603

8

do a lube job

9

1

2

3

Which book will help you to do a good lube job?

- ☐ Book 1
- ☐ Book 2
- ☐ Book 3

19604

9

Book 3

10

To do a complete lube job, the serviceman should look at the:

- ☐ brake service manual
- ☐ lubrication service manual
- ☐ wheel alignment munual

19605

10

lubrication service manual

11

The serviceman should answer:

- ☐ "To do a proper lube job."
- ☐ "To find the part number of the battery."
- ☐ "To hold the hood up."

11

"To do a proper lube job."

12

The serviceman's answer should be:

- ☐ "I did a car like yours last month."
- ☐ "I remember each step as I go along."
- ☐ "I use the lubrication service manual."

19607

13

complete lube job

14

CHECK the reason for using a lubrication service manual:

- ☐ to avoid doing a complete lube job
- ☐ to be sure you are doing a complete lube job
- ☐ to spend lots of time doing the lube job

19609

14

to be sure you are doing a complete job

15

In a service manual:

an Austin comes before a Buick

a Cadillac comes before a Ford

a Dodge comes before a Pontiac

How are cars listed in the service manuals?

- ☐ in alphabetical order
- ☐ by size
- ☐ by weight
- ☐ in numerical order

15

in alphabetical order

16

In a service manual, cars are listed in alphabetical order.

Therefore, an Austin comes:

- ☐ after a Buick
- ☐ before a Buick

16

before a Buick

17

Which car will be listed first in a lubrication service manual?

- ☐ Ford
- ☐ Buick
- ☐ Pontiac

19612

17

Buick (because B comes before F and P)

18

Which car will be found toward the back of a lubrication service manual?

- ☐ Cadillac
- ☐ Valiant
- ☐ Dodge

18

Valiant (because V comes after C and D)

19

Cars are listed in service manuals according to:

- ☐ alphabetical order
- ☐ how large they are
- ☐ how much they cost

19

alphabetical order

- ☐ Special

TECH BRIEF 68–10248—TENSILE TESTING GRIPS ENSURE UNIFORM LOADING OF BIMETAL TUBING SPECIMENS

Stress distribution on bimetal tubing is very poor when standard grips are used in tensile tests. NASA has designed grips which distribute the stress evenly on the inner and outer surfaces of the tubing. The inner grip is made with an expansion grip and cone, while the outer grip is effected with a compression nut. Simple and versatile, the grips can be used with any type of tubing and will improve both the test procedure and the uniformity of its results. A chuck based on the design of this grip could be used for chucking tubes of various diameters without distorting them.

24

The amount of gas, oil, and water that a car takes is called the car's CAPACITY.

The capacity of oil is usually measured in quarts.

The capacity of gasoline is usually measured in:

- ☐ pints
- ☐ quarts
- ☐ gallons

24

gallons

25

This serviceman is talking about different:

- ☐ capacities
- ☐ contents
- ☐ volumes

19621

25

capacities

26

The best wc / for the serviceman to become familiar with the capacities of all makes and models of cars is to:

- ☐ ask the customer what the capacities are
- ☐ guess at the different capacities
- ☐ look at a chart that shows capacities

19622

26

look at a chart that shows capacities

27

LOOK AT PANEL 1

Panel 1 shows gas, oil, and water capacities on a chart called the

L _____ S _____ C _____.

19623

27

Lubrication Service Chart

28

LOOK AT PANEL 1

Besides the gas, oil, and water capacities, the Lubrication Service Chart also tells you about:

- ☐ front suspension and steering linkage
- ☐ the oil pump
- ☐ windshield wipers

19624

28

front suspension and steering linkage

29

LOOK AT PANEL 1

How many fittings does the front suspension and steering linkage have?

_____

What is the cooling system capacity? _____

What is the KARR's crankcase capacity? _____

19625

29

TECH BRIEF 68–10509—ROTARY-KNIFE STRIPPER FACILITATES REMOVAL OF X-RAY FILM FROM PACK

Hospitals and manufacturing plants using large quantities of X-ray film have been troubled by techniques of stripping the film prior to development. Using the common thin-blade knife has led to frequent scratching of the film and working by hand has occasioned film flaws. It also can create a troublesome electrostatic charge. NASA has developed a rotary-knife stripper which is power-driven and has self-sharpening blades. It both strips the film and trims $1/16$ inch from the edge and is designed to be mounted on the film processor apron.

For additional information, circle Key No. 42 on Reader Service Card.

30

yes

31

Lubrication Service Charts tell the serviceman: (CHECK TWO CORRECT ANSWERS)

- ☐ about cars' capacities
- ☐ about prices
- ☐ where parts are located

31

about cars' capacities

where parts are located

32

PICK UP THE PANEL BOOK

FIND PANEL 2

THEN TURN THIS PAGE AND GO ON

19628

32

NO ANSWER NEEDED

33

LOOK AT PANEL 2

PANEL 2 is an actual Lubrication Service Chart.

How would you describe this chart as compared to the first one that you saw?

- ☐ It has less information.
- ☐ It has more information.
- ☐ It has the same amount of information.

33

It has more information.

34

LOOK AT PANEL 2

This page of the lubrication service manual describes:

- ☐ a Buick
- ☐ a Cadillac
- ☐ an Oldsmobile

What year is this car? _____

What model is this car? _____

19630

34

a Buick

1962

Special V-6

35

LOOK AT PANEL 2

In what part of the chart are the make, model, and year of a car found?

- ☐ the bottom
- ☐ the middle
- ☐ the top

35

the top

36

LOOK AT PANEL 2

LOOK at the left-hand column and FIND "Front Suspension and Steering Linkage."

How many fittings does this car have? _____

FIND the line marked "Gas Tank."

How many gallons does this gas tank hold? _____

36

17

16

37

LOOK AT PANEL 2

The information found in the upper right-hand side of the page tells you the oil capacity of the crankcase.

How many quarts of oil does this car hold? _____

37

4

38

LOOK at the line marked "Oil Filter" on the right-hand side of the page.

The "4" to the right of the line is in a:

- ☐ box
- ☐ circle

19634

38

box

39

LOOK AT PANEL 2

Lubrication service manuals also tell you how often parts should be changed.

LOOK AT the column labeled "service as shown."

FIND the number 4 in the box.

Number 4 tells you to replace the oil filter every _____ miles.

19635

39

4000

40

LOOK in the right-hand column for the words "TRANSMISSION, Automatic."

What is the automatic transmission's capacity? _____

What number is in a box to the right? _____

Now LOOK at the bottom of the page.

This number means:

Every _____ miles drain and refill _____.

19636

40

6 quarts

25

25,000 miles

automatic transmission

41

LOOK AT PANEL 2

What does the manual say about the intervals between changing automatic transmission oil?

- ☐ drain and refill every 4,000 miles
- ☐ drain and refill every 10,000 miles
- ☐ drain and refill every 25,000 miles

19637

41

drain and refill every 25,000 miles

42

The lubrication service manual helped the serviceman make a sale by telling him when to:

- ☐ change the water in the radiator
- ☐ drain and refill the automatic transmission
- ☐ lubricate the drive shaft

19638

41

drain and refill every 25,000 miles

42

The lubrication service manual helped the serviceman make a sale by telling him when to:

- ☐ change the water in the radiator
- ☐ drain and refill the automatic transmission
- ☐ lubricate the drive shaft

19639

42

drain and refill the automatic transmission

43

The lubrication service manual:

- ☐ does not affect sales
- ☐ helps the serviceman to make a sale
- ☐ prevents the sale of a transmission oil change

19640

43

helps the serviceman to make a sale

TECH BRIEF 68–10070—BIAXIAL FIXTURE FOR SECTIONAL TESTING OF PRESSURIZED TANKS

The ability of fabricators to test-to-failure sections of pressurized tanks is of great value in determining the overall strength of the tank. However, these tests-to-failure, while disclosing the weakest point, will not identify the other critical areas of the tank surface. NASA has developed a testing fixture which allows sectional testing under cryogenic conditions for areas of about 2 feet square. The technique of this test procedure may also be of considerable value to specialized testing laboratories.

TECH BRIEF 68–10036—TUBE DIMPLING TOOL ASSURES ACCURATE DIP-BRAZED JOINTS

Manufacturers and repairers of equipment containing small diameter metal tubing can simplify their work and improve their product with this new dimpling tool. It ensures accurate placement when tubes of different diameters are brazed together in a series-flow arrangement. By controlled dimpling of the larger tube, the smaller tube will be perfectly centered, the flow pattern will be improved, and the brazing will be easier and stronger. The tool, developed just for this purpose by NASA, is hand held and includes a dial to register the depth of the dimple.

TECH BRIEF 68–10209—MAGNETICALLY CONTROLLED TORQUE WRENCH PREVENTS OVERTORQUING

A torque wrench that releases its grip as soon as the specified torque is exceeded has been developed by NASA. This control is effected by equating the torque force with a magnetic force to free the drive arm from the handle. It can be made up with either permanent or electromagnets. Permanent magnets allow easy portability but the electromagnetic type is capable of much wider control. The torque wrench can be used in any application where accurate torquing is required. The same principle might be incorporated in equipment as a safety device to limit both torsion and torsion loads.

TECH BRIEF 68–10053—REMOTELY INSTALLED PIPE PLUG PROVIDES EFFECTIVE SEAL IN HAZARDOUS ENVIRONMENT

Makers of oil field and chemical plant equipment may find particular value in this remotely controlled pipe plug that can provide an effective gas seal against pressures of 75 p.s.i under a wide variety of conditions. The sealer is operated by an actuator handle and firmly clamps itself to the pipe. The pipe plug provides the gas-tight seal by expanding a rubber seal against the inside surface of the pipe opening. Intial turns of the actuator clamp the device in place, and further turns then compress the seal firmly in place. This seal also may be valuable in underwater operations, biological work, pressure systems, et cetera where hazardous conditions prescribe remote manipulation techniques.

For additional information, circle Key No. 46 on Reader Service Card.

TECH BRIEF 68–10270—SPIRAL-GROOVED SHAFT SEALS SUBSTANTIALLY REDUCE LEAKAGE AND WEAR

Seals on most rotating shafts are unsuitable for long term operation unless maintenance can be performed regularly. There is an additional problem when the seals must hold against pressure or thermal differentials, or must retain pumped fluids such as caustics or desiccants. NASA has developed a spiral-grooved seal that overcomes these problems by countering the centrifugal forces (as would displace fluids outwards) and maintaining separation of the seal faces to prevent wear. These spiral seals will be useful in a number of applications such as pumps, compressors, blowers, and others.

For additional information, circle Key No. 47 on Reader Service Card.

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on ordering replacement parts was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

Mercury

10

Parts must be ordered according to the make of the car that is being worked on.

What information can help you to order the correct part? (CHECK ALL CORRECT ANSWERS)

- ☐ car is dirty
- ☐ car is a Corvair
- ☐ car needs repairs

19694

10

car is a Corvair

11

When ordering parts from a parts salesman, you must tell him the m_____ of the car.

19695

SEALS AND SEALING TECHNIQUES (NASA SP–5905(01))

This report on seals and techniques developed by NASA and its contractors to solve problems may be useful to many businesses. Some special purpose seals and gaskets which were developed are a vented gasket for liquid hydrogen valves which reduces leakage into a vacuum chamber; a soft metal seal with serrated top and bottom which seals conical surfaces; a reusable tear-strip hermetic seal, and a glass-to-metal seal of thermoplastic material for a nickel-cadmium battery. The sealing and packaging techniques include a simplified orifice seal assembly of Teflon, and a restrained, pressure-balanced plastic rubbing ring used under high-fluid-pressure conditions. Two general techniques have been developed to standardize packaging specifications for spiral wound gaskets, pressure actuated seals, disks, rings, and similar materials. Four seal installation tools are described: one facilitates installing O-rings over sharp external threads, and another protects O-rings from damage caused by thread edges. An electrically heated hand cutter and sealer for nylon and fiberglass, which can be modified to use on wood, leather, fiberboard, plastic film, and other materials, appears useful. 1967. 14 pp. CFSTI $0.25.

SEALING ARRANGEMENT FOR PISTON-CYLINDER PRESSURE VESSEL (PAT. NO. 3,415,170)

Shops concerned with isostatic hot presses will be interested in this sealing arrangement which has the ability to hold 200,000 p.s.i. at room temperature and 4,000 p.s.i. at 300° F. without seal failure. This device provides a seal with a capacity to increase with increasing pressure and yet does not extrude between the piston and the die at any point in the pressure cycle. In this arrangement, the seal is made of soft copper but can be made of polyvinyl chloride. Once pressure is release
in removing the piston from
releases at the same time. Thi

ride. Once pressure is released, there is no difficulty in removing the piston from the cylinder as the seal releases at the same time. This sealing technique may broaden the scope of isostatic hot press equipment.

Administering Office: Atomic Energy Commission, Assistant General Counsel for Patents, Washington, D.C. 20545.

METHOD OF PROVIDING REFRACTORY METALS WITH PROTECTIVE COATINGS (PAT. NO. 3,362,842)

Companies which make products of refractory metals for operation at elevated temperatures will find this coating process of interest and use. The method prevents oxidation of the coated articles by the elimination of both substrate metal ion and oxygen ion diffusion through the coating. P conductors, when used as coatings on metals, allow ions of the substrate to diffuse through the coating and oxidize at the coating air interface. N conductors, when used as metal coating, permit oxygen ions to diffuse inwardly through the coating thereby promoting oxidation at the metal coating interface. If, then, an N conductor is applied as a coating adjacent to the metal and a P conductor is applied as a second layer, metal and oxygen ions cannot easily diffuse through the coating. The specific semiconductors must be selected with care. The technique is not expensive nor difficult to use. It can be applied to objects of almost any size and shape.

Administering Office: Department of the Navy, Patent Counsel, Washington, D.C. 20360.

METALLURGICAL ASPECTS OF RELIABILITY FOR SMALL NITRIDED PARTS (N68–34248)

Useful statistical and metallurgical aspects of the nitriding process for hardening small parts is presented in this report from Goddard Space Flight Center, Greenbelt, Md. It contains information of great value in clarifying the reliability figures previously assigned to the nitriding process. Metal shops using the technique may find the report useful in both OC and reliability number assignments.

the year of the car

the part number

31

Companies that manufacture parts make books that list the number of each part. These books are called parts CATALOGS.

Parts catalogs tell you:

- ☐ the number of a part
- ☐ how to use the part

19715

METHOD FOR SPRAY FORMING OF TUBULAR BODIES (PAT. NO. 3,397,732)

This invention is a novel way of making tubular sections by spraying molten metal onto a removable form. It will be of great value to plants and shops working with unusual sizes of tubular bodies or which have tubular size and shape requirements not easily available commercially. A collapsible mandrel supports the form. The mechanism for doing this is similar to a lathe. The mandrel is rotated and the device for spraying the molten metal is moved along the axis of the mandrel by a lead screw. Tubular sections made this way are seamless, may have extremely thin walls, and can be formed from layers of different metals. Repeated sprayings increase the thickness of the tubular section. After the tube is formed, the mandrel is simply collapsed and removed. This method of spraying, followed by shear extrusion, or hot or cold working, may be repeated for any required number of cycles to achieve the desired dimensions or other necessary characteristics.

Administering Office: Department of the Army, Office of the Judge Advocate General, Chief, Patents Division, Washington, D.C. 20360.

TECH BRIEF 68–10249—HIGH-T TURE BEARING LUBRICANTS

Proper lubrication of a bearing is a successful operation and endurance a design and material selection. Yet today are generally incapable of protecting temperatures over 450° F., while bearin called upon for operation at increasing peratures (500° to 700° F.). NASA rese problem has led to a synthetic paraffi cant that will assure operation at 600° than the catalog life of the bearing. Bo finic base oil and the additives are available; only antiwear and antifoam used. This lubricant should be valuable ing installation where heat is a problem

TECH BRIEF 68–10249—HIGH-TEMPERATURE BEARING LUBRICANTS

Proper lubrication of a bearing is as vital to its successful operation and endurance as is proper design and material selection. Yet today's lubricants are generally incapable of protecting a bearing at temperatures over 450° F., while bearings are being called upon for operation at increasingly high temperatures (500° to 700° F.). NASA research into this problem has led to a synthetic paraffin base lubricant that will assure operation at 600° F. for longer than the catalog life of the bearing. Both the paraffinic base oil and the additives are commercially available; only antiwear and antifoam additives are used. This lubricant should be valuable in any bearing installation where heat is a problem.

CHEMICAL VAPOR DEPOSITION OF THIN FILM DIELECTRICS (AD–674 020)

Chemical vapor deposition (CVD) is a technique for forming a thin film of TiO_2 with the desirable dielectric properties. It uses the reaction of tetraisopropyl titanate in an oxidizing atmosphere containing water vapor. CVD yields the widest range of technological possibilities for forming dielectrics with good control of variables and products. Dielectric constants range from 50 to 100 with a breakdown strength of 200,000 volts/cm. The thickness of the film ranges from 1,200 to 3,000 angstroms. The dissipation factor varies from 4 percent to 30 percent, with the average near 10 percent. This technique was developed at Texas University Electronics Research Center, Austin, Tex., and may interest electronic manufacturers.

TECH BRIEF 68–10062—PYROTECHNIC DEVICE PROVIDES ONE-SHOT HEAT SOURCE

A small, light pyrotechnic heater has been developed by NASA to solve the temperature control problem for localized packages and small areas. Consisting of two mating aluminum tubes, an initiator section, and a heater section, the device can provide 850 to 900 B.T.U.'s per pound and supply temperatures of about 600° F. if needed. Heat is created by an exothermic reaction between an active element, such as boron or magnesium, and an oxygen-supplying compound, such as barium chromate or molybdenum trioxide. The device is safe, reliable, and incapable of reacting until the tubes are joined together and electrically fired. It could be included in a repair kit for welding items in places inaccessible to regular welding equipment.

For additional information, circle Key No. 49 on Reader Service Card.

TECH BRIEF 68–10340—APPLICAT OF THE SOLID LUBRICANT MOLYB NUM DISULPHIDE BY SPUTTERING

To take fullest advantage of the lubricant q ties of molybdenum disulphide (MoS_2), the l cant film of MoS_2 must be bonded to the surfa the material requiring lubrication. Under thos cumstances, MoS_2 will function well in all condi including high temperature and high vacuum ronments. NASA studies have shown that can best be bonded to a surface by a three-elect sputtering system. The bonding is continuous, form, and strongly adherent; the equipmen quired is not difficult to assemble or operate. report gives instructions in sputtering and desc the use of MoS_2 in lubricating bearing surfac environments containing chemicals that woul stroy most bonding agents.

For additional information, circle Key No. 5 Reader Service Card.

51

number

52

TECH BRIEF 68–10340—APPLICATION OF THE SOLID LUBRICANT MOLYBDENUM DISULPHIDE BY SPUTTERING

To take fullest advantage of the lubricant qualities of molybdenum disulphide (MoS_2), the lubricant film of MoS_2 must be bonded to the surface of the material requiring lubrication. Under those circumstances, MoS_2 will function well in all conditions including high temperature and high vacuum environments. NASA studies have shown that MoS_2 can best be bonded to a surface by a three-electrode sputtering system. The bonding is continuous, uniform, and strongly adherent; the equipment required is not difficult to assemble or operate. This report gives instructions in sputtering and describes the use of MoS_2 in lubricating bearing surfaces in environments containing chemicals that would destroy most bonding agents.

For additional information, circle Key No. 50 on Reader Service Card.

METALWORKING PROCESSES AND EQUIPMENT (AD–675 784)

A coordinated committee report (Army-Navy-Air Force-NASA), under the Government Metalworking Processes and Equipment Program, identifies salient factors which limit metal deformation processes. At the same time, the committee sponsored research to extend these limits to improve manufacturing capabilities. This final report will be of interest to metal forming shops and researchers, designers, and builders of metalworking equipment. It contains 34 recommendations for R. & D. in various metalworking areas such as: vibrational energy, hydrostatic extrusion, superplasticity, ductile fracture, application of computers to deformation processing, and others.

METAL FABRICATION (NASA SP–5915 (01))

This publication includes 12 techniques and devices, developed by NASA and its contractors, covering cutting, machining, shaping, and forming. Section 1, *Cutting and Machining*, contains abstracts on minimizing burr formation by filling drilled holes with a nonferrous alloy before machining, instead of hand deburring which is time consuming and may raise rejection rate; and the use of paradichlorobenzene as a filler and rigidizer to prevent collapse of the core of brazed or bonded steel honeycomb sandwiches during roll or brake forming. Also described are the separation of brazed tubes with a tungsten heated probe under controlled temperature and pressure which minimizes the fracturing or annealing of the tubes; and a linear-shaped explosive charge which enables a cutting device to cut in two directions.

In section 2, *Shaping and Forming*, are three abstracts depicting the use of ice to form very sharp bends in metal tubing with practically no reduction of the internal area; to provide internal pressure to prevent cave-in or collapse of flattened tubes of uniform cross section and which permits the use of welded and drawn tubing instead of seamless tubing; and also as a form to fabricate a spherical metal container. The remaining five abstracts include a set of programing tools to determine the distance between bends, planes, and angles of the bends in a preformed master tube so that the configuration can be programed into a numerically controlled tube bending machine for production purposes; a dimpled sheet forming process which permits 0.004-inch and 0.006-inch metal sheets to be dimpled in various shapes; and the application of an adhesive backed spacer to the surface of a workpiece to protect raised channeling from deforming during roll-forming operations. Also included are the use of titanium wire as corner fillets in diffusion bonded structures which produces better structural integrity, fatigue life, and crack resistance; and a forming technique for end closure rings which are used to transfer a uniform load to a sandwich structure. 1968. 8 pp. CFSTI $0.20.

FABRICATION OF TITANIUM CUPOLA PROTOTYPE FOR COMMANDER CAR XM21 (XM13) (AD–676 167)

The fabrication of two titanium alloy gun mounts is described in this report by Watertown Arsenal, Mass. Two alloys (Ti-6Al-4V and Ti-4Al-4V) were selected. Hot working procedures were developed, including the design and construction of special forming dies for titanium plate and closed dies for forging massive components of complicated geometry. Tape-controlled automatic reproduction machining of titanium parts having unusually complex shapes was successfully carried out. Techniques and invaluable shop skills were developed for the successful forming and welding of titanium alloy plates into precisely constructed structures. The two titanium cupolas were assembled by welding, machining, and hand fitting. These procedures may be of interest to fabricators of titanium components.

HAND TOOLS (NASA SP–5908 (01) AND (02))

A selection of novel tools, modifications, or unusual uses for existing tools have been compiled in these two special publications under three sections: (1) Electronic and Electrical Tools, (2) Portable Tools, and (3) Assembly and Special Tools.

In the first report under section 1 are: a new printed circuit board extractor that prevents uneven pull and twisting which causes damage to mounted components; a set of three tools that disengage Cannon Connectors quickly and cleanly without damage to the connector or connecting cable; a harness and tubing clamp holding tool, and a helical wrapping device. In section 2, a template and sheet metal line scribe, a sealing tool, a tube beading tool, one for reversing countersinks in sheet metal, and debraze knockoff tools are described. Section 3 includes a safety wire twister, blind bolt handtool, and a spanner wrench for umbilicals.

The second report contains the following: Section 1, an electronic card puller, the use of which results in fewer twisted or dropped circuit boards than when pliers or wire hooks are used; a tool that permits many component leads to be sheared off simultaneously in uniform lengths or tapered at varying lengths; a bending jig for transistor leads, a method of making cutting pliers safer, and a tool for applying potting compounds in hard to reach areas. Section 2 has abstracts on a ferrule puller, flange trimming, sleeve machinery, honeycomb cutter, and clearance measuring tools. Included in section 3 are abstracts on a torque wrench attachment, an adapter which allows handling of tools with one master slave manipulator, a flexible line compression tool, an insert for a T-wrench, and a gear nut and spanner wrench. All of the tools are believed to be useful and practical. NASA SP–5908(01). 1968. 12 pp. CFSTI $0.25; NASA SP–5908(02). 1968. 8 pp. CFSTI $0.20.

POST-TEST BOOK 21: ORDERING REPLACEMENT PARTS

A BASIC SYSTEMS PROGRAM

19780

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE CORRECT ANSWERS.

1-3

You call your parts dealer to order a replacement part. What should you tell him about the car you are working on?

_____

_____

_____

4-5

For the parts salesman to be able to deliver the part you order, he must know your _____ and _____.

6

Manufacturers list the parts they make in books called _____.

7

Parts are listed according to _____ order.

8

To identify a part, every manufacturer gives the part a _____.

9-11

"Send me a water pump for a Chevrolet Impala."

NAME the three things that should have been added to the parts order for the correct part to be delivered:

_____

_____

** Early Models

COMET, MERCURY, LINCOLN

1963-64	Comet, Mercury, 1963 Meteor	P-111-5
1962	Comet	GF-11-10
1962	Mercury, Meteor	P-111-5
1960-64	Lincoln	GF-11-4
1960	Mercury and Comet	GF-11-4
1961	Mercury, Comet	GF-11

Purolator recommends "GF-11" series gasoline filters as replacements for limited capacity original equipment filters ("EP" series). Both are listed above

COMET, MERCURY, LINCOLN (Cont.)

1958-59	Lincoln (with 430 eng.)	EP-124
1958-59	Mercury (with 383 or 430 eng.)	EP-124
1957-59	Mercury (with 312 eng.)	EP-124
1958-59	Lincoln	GF-11-8
1954-59	Mercury, 1952-57 Lincoln	GF-11-1

DE SOTO

1959-61	All Models	GF-11
1958-59	Early 1959 Models	P-111-5
1955-59	Some Models	EP-134
1946-61	All Models	GF-11-1

DODGE, DART & LANCER

1960-64		GF-11
1955-59	Models equipped with Carter fuel filter	EP-134
1946-59	All Models	GF-11-1

FORD, FALCON & THUNDERBIRD

1962-64	All Models (except 1962 Falcon)	P-111-5
1962	Falcon	GF-11-10
1961	All Models	GF-11-1
1960	All Models except Falcon	GF-11-3
1960	Falcon	GF-11-4
1955-59	All Models	EP-142
1955-59	V-8 and 1952-59 6 cyl.	GF-11-1
1955-59	Thunderbird (filter next to fuel pump)	EP-142
1955-59	T-Bird (filter separate from fuel pump)	EP-124

EDSEL

1960	All Models	GF-11-3
1958-59	All (with 223, 332 & 361 eng.)	EP-142
1959	All (with 282 eng.)	EP-142
1958-59	All Models	GF-11-1

PLYMOUTH & VALIANT

1959-64		GF-11
1948-58		GF-11-1

OLDSMOBILE & F-85

1963-64	All (except F-85 & Jetstar)	EP-226
1963-64	F-85 & Jetstar	GF-11-1
1957-62	(except F-85)	EP-124
1961-62	F-85	EP-226
1961-62	(with rubber hose) also 1950-60 models	GF-11-1

PONTIAC & TEMPEST

1964	All (except 3-2 bbl. carb.)	GF-11-8
1964	All (with 3-2 bbl. carb.)	GF-11-11
1960-63	w/o air cond. (exc. Tempest & '63 2 bbl. carb.)	GF-11-11
1957-58	also early '59	EP-124-1
1961-62	Tempest (also 1948-57 models)	GF-11-1

RAMBLER • HUDSON • WILLYS

1962-64	All Models	EP-221
1956-58	(equipped with Carter fuel filter)	EP-134
1954-59	Willys (6-226 eng.) also 1948-61 models	GF-11-1
1946-58	Willys (except 6-226 eng.)	GF-11-7

STUDEBAKER & PACKARD

1964	All Models (with V-8 eng.)	EP-226
1963	Hawk & Lark (with V-8 supercharged)	EP-226
1963	Avanti (w/o supercharger)	GF-11
1959-64	6 cyl. Models	EP-142
1961-62	All V-8 Models	GF-11-1
1946-58	6 cyl.	GF-11-7
1946-58	Supercharged Golden Hawk	GF-11-8

CHEVROLET OIL FILTERS

1963-64	Models with 230 or 292 eng.	PER-11
1962-64	V-8 283, 348 & 327 (except optional)	P-141
1962-64	Diesel 4-53 or 6-53 eng.	EP-78
1961-64	Corvair	PER-14
1963-64	Models with 4 cyl. 153 eng.	PER-12
1962-63	Model 327 eng. (optional)	EP-78
1962-64	Models with V-8 409 eng.	EP-78
1959-62	Models with 6 cyl. 261 eng. (optional)	P-141 EP-78
1962	Models with 6 cyl. 235 eng.	P-51
1958-61	Models with V-8 eng.	P-141
1956-61	6 cyl. if factory equipped except 261 eng.	P-51
1940-58	Models except COE with 6 cyl eng.	Kit 428E
1955-57	Models with V-8 eng.	P-131
1940-55	6 cyl. 261 eng. if factory equipped	P-51

CHEVROLET AIR FILTERS

1963-64	Models with 6 cyl. 230 eng.	AFP-59
1961-64	Corvair	AFP-55K

GMC FILTERS

1954-61	6 cyl. oil filter pipe refill	AF-3
1959-64	Models V-6 and V-12 eng.	AF-13
1960-64	Models with 305B, 305C, 351, 401, 478 or 702 eng.	EP-78
1963	Models with 351, 401 or 478 eng.	P-111-5
1956-64	4-71, 6-71, 6V-71, 8V-71 diesel eng. *	EP-78
1960-63	Models with 305A* or 305B eng.	P-124
1955-61	Models with 6 cyl. 270 eng. (Partial)	P-37 or P-50
1955-58	Models with V-8 eng.	P-124
1949-58	Models with 6 cyl 248 eng. (Partial)	P-37 or P-50
1949-58	Models with diesel 4-71, 6-71 eng.	P-38

* 305A engine obsolete in 1962
Plus 10954 2 gasket P-36 used with P-92 on 413 BB eng
(Optional PER 1)
** P-92 & 10954 2 gasket optional on 1951-52

FORD OIL FILTERS

1960-64	Econoline, P-100 with 144 and 170 eng.	PER-1
1963-64	Models with 223, 262, 292 or '64 330 HO eng.	P-49*
1964	Models (with 330 HO, 361, 391 eng.)	P-48
1958-62	Models with V-8 292 eng.	P-49*
1954-63	Models with V-8 302 or 332 eng.	P-48
1952-59	Models with 215 or 223 eng.	P-48
1960-62	Models with 223 eng.	P-49
1958-63	V-8 401, 477 or 534 eng.	P-169
1940-53	Models with 239 or 254 eng.	P-34
1953	Models with V-8 278 & 312 eng.	P-48

FORD AIR FILTERS

1960-62	Econoline Truck	AFP-45
1957-61	Models with EBT 223 eng.	AFP-10
1960	Models with EBR 223 eng.	AFP-18
1960	EEH 292 or EEJ 292 eng. (Partial)	AFP-5
1960	EEJ 292 or EEK 292 eng. (Partial)	AFP-33
1960	With ECS 302 or ECT 332 eng.	AFP-34
1958-60	Models with 401, 477, 534 eng.	AFP-16
1957-59	V-8 272, 292, 312 eng. & 6 cyl. 223 eng.	AFP-5
1957-58	V-8 Heavy Duty 302 & 332 eng.	AFP-50

FORD GASOLINE FILTERS

1964	All Models with 223, 292 2 bbl. carb.	EP-221
1962-64	Models with 144 or 170 eng.	GF-11-10
1957-64	All (except 144, 170, 223, 292 2 bbl. carb.)	P-111-5
1958-64	401, 477, 534	P-485

DODGE OIL FILTERS

1963-64	With 6 cyl. 170, 225 or 251 eng.	P-76-2
1959-64	Models with V-8 318A eng.	P-76-1††
1961-64	With V-8 361B & 413BB eng.	P-92†
1959-62	WM-3 (6 cyl. 251 eng.)	P-70FF
1960-62	With Cummins eng.	PT-750 & 61474-1
	Fuel Filter	PER-15
1939-58	Models	PER-½
1946-60	Over ½ ton (Partial)	P-90, T-1 or T-1P

DODGE AIR FILTERS

1960-62	C-5, C-6, D-1, D-2, D-3, D-4, D-5, D-6, S-6, W-1, W-2, W-3, W-5	AFP-43
1961-64	D-1, D-2, D-3	AFP-14
1964	D-1, D-2, D-3 (Optional), C-5, C-6, D-4, D-5, D-6 (Standard)	AFP-43
1961-63	C-6, C-7, C-8, C-9, C-10, CT-7, CT-8, CT-9, D-7	AFP-42

DODGE GASOLINE FILTERS

1959-63	C-5, C-6, C-7, C-8, C-9, C-10, CT-7, CT-8, CT-9, D-4, D-5, D-6, P-4, W-3, W-5	P-111-5
1964	C-5, C-6, D-4, D-5, D-6, D-7, W-3, W-5	P-111-5

INTERNATIONAL OIL FILTERS

1961-64	Models with 4 cyl. 152 eng.	EP-135
1957-60	Models with BD-220 or B-240 eng.	EP-135
1961-64	Models with BD-220, BD-240 or BD-264 eng.	EP-206
1961-64	Models with D-301 eng. (Diesel)	EP-118
	(Fuel)	P-71
1958-64	Models with V-266, V-304 or V-345 eng.	EP-135
1958-64	Models with BD-282 or BD-308 eng.	EP-135
Late 1959-64	RD-372, RD-406, RD-450, RD-501 eng.	EP-137
1958-64	Models with V-401, V-461, V-549 eng.	EP-137
1958-64	Models with Cummins eng.	
	Air Filter	AF-1012
	Oil Filter	PT-750 & 61474-1
	Fuel Filter	PER-15 or P-485
1958-59	(Only late model '58's)	EP-119-1
1956-57	Models with V-401, V-461 or V-549	T-66
1950-58	Series A, L, R, S except diesel & V-8	T-66

INTERNATIONAL AIR FILTERS

1960-63	Models with Cummins eng.	AF-1012
1957-60	Models with BD-220, BD-240, BD-264, BD-282, BD-308 (Partial)	AFP-9
1957-59	COE Models with V-8 eng.	AF-41
1958-59	ACO-195, 200, 220 (V-8 eng.)	AFP-17

ALFA-ROMEO

1956-64	Giulietta Berlina, Giulietta Sprint, Giulietta Spyder, Romeo Diesel	P-10-L

AUSTIN

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on salesmanship and good customer relations was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

attendant B

20

A service station attendant should be:

- ☐ friendly and polite
- ☐ loud-mouthed and vulgar
- ☐ careless and rude

19814

20

friendly and polite

21

When you are dealing with customers, you should behave in a _____ way.

Should you ever curse at a customer?

- ☐ yes
- ☐ no

19815

21

polite or friendly

no

22

An experienced service station attendant should be:

- ☐ dirty
- ☐ friendly
- ☐ neat
- ☐ polite

22

friendly

neat

polite

23

A customer who gets service for his car expects you to look

_____ and _____.

19816

23

clean (and) neat

24

How would you describe the appearance of an experienced attendant who takes pride in his appearance? _____

19817

24

looks clean and neat

25

Car owners are often in a hurry when they buy gasoline.

Because of this, they:

- ☐ like to wait while you finish a lube job
- ☐ want service to be as fast as possible
- ☐ ask if they can leave the car and walk around

19818

25

want service to be as fast as possible

26

When a car pulls up to the gasoline pumps, you should:

- ☐ take plenty of time to get to the pumps
- ☐ tell the customer to help himself
- ☐ get to the pumps right away

19819

26

get to the pumps right away

27

A service station attendant gets to the gas pumps quickly because many customers expect f_____ s_____.

19820

27

fast service

28

You should listen to customers when they complain about service because: (CHECK TWO CORRECT ANSWERS)

- ☐ all customers are rich
- ☐ customers have a right to complain
- ☐ customers who complain are nuts
- ☐ customers never complain when you are wrong
- ☐ customers may be right about their complaints

19821

28

customers have a right to complain

customers may be right about their complaints

29

Customers have a right to complain if they want to, so you should:

- ☐ listen to the customers
- ☐ ask complaining customers to leave
- ☐ make up a funny story about the complaining customers

Steeb, Ralph V.; Geil, John J.
Safety in Industrial Arts Laboratories.
Bulletin 76H-1.

Florida State Dept. of Education,
Tallahassee.
MF AVAILABLE IN VT-ERIC SET.
PUB DATE - May69 86p.

DESCRIPTORS - *INDUSTRIAL ARTS; SAFETY EDUCATION; *LABORATORY SAFETY; ACCIDENT PREVENTION; SAFETY EQUIPMENT; SAFETY; *INSTRUCTIONAL MATERIALS

ABSTRACT - A really effective safety program is practiced regularly and naturally as part of the daily work. This manual was developed by industrial arts consultants to help the teacher develop within each student an awareness of safety that will carry through school and into postschool work and recreation. The purpose of safety education is: (1) to protect the student from injury while in the school shop or laboratory, and (2) to develop habits, attitudes, and perceptions which will help insure his safety throughout his lifetime. Major topics include: (1) Safety and Liability, (2) Causes of Accidents, (3) Providing for Safety, and (4) Safety Rules, covering all areas of industrial arts. Appended materials include a national standard safety inspection checklist, accident form, a selected bibliography, and listings of posters, charts, films and filmstrips, and catalogs and directories. A selected bibliography is appended. (GR)

VT 011 775

29

listen to the customers

30

Would you say that this customer had a right to complain about the work being done on his car?

- ☐ yes
- ☐ no

19823

30

yes

31

As an experienced attendant, you should listen to complaints because: (CHECK TWO)

- ☐ you want to know how to improve service
- ☐ some of them are funny
- ☐ you like to keep customers satisfied with service
- ☐ you know the customer is never right

19824

31

you want to know how to improve service

you like to keep customers satisfied with service

32

You should listen to a complaining customer because:

- ☐ he never gets what he wants anyway
- ☐ you may find out that he is complaining for a good reason
- ☐ there is no such thing as poor service at your service station

19825

32

you may find out that he is complaining for a good reason

33

When a customer complains, an experienced service station attendant _____.

19826

33

listens (or pays attention)

34

Service station operators are in business to make sales and profits. You should NEVER tell customers about these things.

This means that you can:

- ☐ brag about how much your boss clears on a job
- ☐ tell the customer only what the repairs will cost
- ☐ tell the customer how much you make on the repairs done to his car

19827

34

tell the customer only what the repairs will cost

35

An experienced service station attendant never talks with customers about:

- ☐ driving conditions and traffic
- ☐ sports and entertainment
- ☐ service station profits and costs
- ☐ different kinds of cars

19828

35

service station profits and costs

36

A customer wants to talk about:

1. repairs his car needs
2. service his car needs
3. what repairs and service will cost

Example A

A customer wants to talk about:

1. the station's profits
2. the station's costs
3. the station's expenses

Example B

It is "OK" to talk with a customer about the things listed in:

- ☐ example A
- ☐ example B
- ☐ neither example A nor example B

19529

36

example A

37

You should NEVER talk with a customer about: (CHECK TWO)

- ☐ new products for cars
- ☐ the station's profits
- ☐ the importance of car maintenance
- ☐ the wholesale cost of gasoline

19830

37

the station's profits

the wholesale cost of gasoline

38

A = profits

B = costs

C = expenses

You should talk with customers about:

- ☐ A and B
- ☐ B and C
- ☐ A, B, and C
- ☐ neither A, B, nor C

19831

38

neither A, B, nor C

39

When the cigarette spark is falling into the can (see picture):

- ☐ the gas in the can will spill over
- ☐ the spark will go out
- ☐ the gasoline will explode

ASSISTANT COMMISSIONER
DIVISION OF VOCATIONAL, TECHNICAL,
AND ADULT EDUCATION

1958

39

the gasoline will explode

40

LOOK AT the picture above.

There are gasoline fumes in the air because the gas cap is off.

Can this gasoline vapor explode?

- ☐ yes
- ☐ no

19833

40

yes

41

Gasoline fumes are very explosive.

CIRCLE the things named below that will make gasoline explode:

cigarette sparks	hot weather	burning matches	noise

19834

41

cigarette sparks

burning matches

42

Dangerous sparks can come from:

- ☐ worn-out tires
- ☐ gasoline and oil
- ☐ radio static
- ☐ cigars, cigarettes, and pipes

42

cigars, cigarettes, and pipes

43

What should <u>not</u> be in the picture? _____

19836

43

the pipe

44

When pumping gasoline, you should never _____.

19837

44

smoke

45

Whenever a customer pulls up to the gasoline pumps, you should _____.

19838

45

wipe the windshield

46

When do you wipe the windshield on a car?

- ☐ after the car pulls away from the gas pumps
- ☐ when the customer agrees to buy 10 gallons of gas
- ☐ whenever a car pulls up to the gas pumps

19839

46

whenever a car pulls up to the gas pumps

47

You clean the windshields on the cars that come to your service station because:

- ☐ customers deserve this service
- ☐ it keeps the customer waiting on the service station
- ☐ you want to annoy the driver of the car

1940

47

customers deserve this service

48

Which cars should have their windshields cleaned?

- ☐ only small sports cars
- ☐ only large expensive cars
- ☐ all cars that pull up to the gas pumps

19841

48

all cars that pull up to the gas pumps

49

What should you do to every car that drives up to the gas pumps? _____

19842

EMERGENCY ACTION

BE PREPARED: Think through what you will do in event of injury before the emergency occurs. Discuss emergency procedures with your department head and/or principal. Arrange communications, first aid, transportation, and other details before an accident occurs.

In Event of Injury, Take the Following Steps Immediately:

1. Have someone notify department head and/or principal.

2. First aid, if needed, should be administered by a qualified person only (nurse or person with Red Cross training).

3. If injury is serious:

   a. Give no medication
   b. Notify parents. They should contact family doctor.
   c. If unable to contact parents, contact family doctor direct.
   d. If above fails, call local doctor or hospital.
   e. Contact parents as soon as possible.
   f. Stanch profuse bleeding with antiseptic compress. Do not use tourniquet unless trained.
   g. Do not move victim if bone fracture is likely (falls, collisions, etc.).
   h. Keep victim warm.

4. District superintendent should be notified of any serious injury as soon as possible after the injury occurs.

0301 1959

49

clean the windshield

50

The attendant in the drawing is cleaning the windshield of the car. He should tell the customer about:

- ☐ the weather
- ☐ the broken windshield wiper
- ☐ the rear-view mirror

19843

50

the broken windshield wiper

51

The thing to do when you see a broken windshield wiper on a car is:

- ☐ suggest to the customer that he should buy a new wiper
- ☐ remove the wiper without telling the customer anything
- ☐ wrap a piece of cloth around the wiper

51

suggest to the customer that he should buy a new wiper

52

When you clean a car's front window, you should look for a chance to sell:

- ☐ new tires
- ☐ a car wash
- ☐ windshield wipers
- ☐ seat covers

52

windshield wipers

53

When cleaning the windshield, you should look for a chance to sell _____.

19846

53

windshield wipers

54

Which serviceman is being polite to the driver?

- ☐ serviceman A
- ☐ serviceman B

Which serviceman will probably sell more gasoline?

- ☐ serviceman A
- ☐ serviceman B

19847

54

serviceman A

serviceman A

55

CIRCLE the words you should say to a customer when he drives up to the gas pumps:

"Can I fill the gas tank, sir?"

"Your windshield sure is dirty!"

"What's your problem, mister?"

"You'll get a full tank of gas, if you wait."

19848

55

"Can I fill the gas tank, sir?"

56

Which of these men sounds like an experienced service station attendant?

- ☐ attendant A
- ☐ attendant B

What will he probably sell the customer? _____

56

attendant B

a tankful of gasoline

57

Trying to sell a tankful of gasoline is the sign of:

- ☐ a beginning service station attendant
- ☐ an experienced service station attendant

57

an experienced service station attendant

58

The serviceman is checking the motor oil with a:

- ☐ clean wiper
- ☐ dirty rag

19851

58

clean wiper

59

The serviceman is adding water to the car's:

- ☐ crankcase
- ☐ radiator
- ☐ transmission

19852

THE FIVE "E'S" OF SAFETY EDUCATION

ENGINEERING: Control of physical conditions

EDUCATION: A planned, positive approach to learning rules and behavior

ENFORCEMENT: Constant insistence that safety rules be followed

EXAMPLE: The teacher as leader

ENTHUSIASM: The essential ingredient

(Adapted from Teacher Liability in School-Shop Accidents, Denis J. Kigin, Prakken Publications, Inc., Ann Arbor, Michigan, 1963)

1960 1929

59

radiator

60

The attendant is adding water to the car's:

- ☐ battery
- ☐ gas tank
- ☐ radiator

19853

60

battery

61

Unless a customer is in a big hurry, you should check the car's motor oil, cooling system water, and battery water.

To do this, you must:

- ☐ jack up the front end of the car
- ☐ raise the hood
- ☐ roll up the windows

By doing this, you can:

- ☐ make sales to the customer
- ☐ never make a sale to a customer

19854

61

raise the hood

make sales to the customer

62

By selling a customer the things his car needs, you are:
(CHECK TWO CORRECT ANSWERS)

- ☐ making sales and profits for your service station
- ☐ letting the customer know you are interested in his car
- ☐ sticking him with things his car can never use
- ☐ helping your service station to go broke

62

making sales and profits for your service station

letting the customer know you are interested in his car

63

The service station attendant must raise the hood to check the battery.

When the hood is raised, the serviceman also checks:
(CIRCLE TWO)

the radiator the tires the oil the axle

63

the radiator

the oil

64

The picture shows three check points under the hood. An experienced service station attendant looks at:

- ☐ the radiator only
- ☐ the radiator, battery, and oil level in the engine
- ☐ the oil level in the engine or the battery

19857

64

the radiator, battery, and oil level in the engine

65

Almost all customers expect you to look under the hood and check: (CIRCLE THREE)

the battery the fuel pump the motor oil level

the piston rings the radiator the spark plugs

By checking these three things, you show that you are:

- ☐ a beginning service station attendant
- ☐ an experienced service station attendant

65

the battery

the motor oil level

the radiator

an experienced service station attendant

66

Three things an experienced service station attendant always checks are:

b _____

r _____

motor o _____

This will make a s _____ customer.

19859

66

battery

radiator

(motor) oil

satisfied

67

The service station attendant is:

- ☐ careful not to let oil drip on the fender
- ☐ letting oil drip on the fender
- ☐ cleaning the fender

67

careful not to let oil drip on the fender

68

The experienced attendant never spills water on a car's body.

Would you call this attendant experienced?

- ☐ yes
- ☐ no

19861

68

yes

69

You check a car's oil level. If you see that there is a quart of oil missing, try to sell the customer an oil change.

You can do this by: (CHECK TWO)

- ☐ asking the customer how long it's been since his last oil change
- ☐ letting the customer know you only sell oil changes
- ☐ showing the customer that the car needs one quart of oil
- ☐ just going ahead and changing the oil

69

asking the customer how long it's been since his last oil change

showing the customer that the car needs one quart of oil

70

If you cannot sell the customer an oil change, you should:

- ☐ get out of the service station business
- ☐ run the customer out of the station
- ☐ sell the customer the quart of oil that he needs

19863

70

sell the customer the quart of oil that he needs

71

You should try to sell oil changes:

- ☐ if you think you can get away with it
- ☐ when the oil level shows that oil has been used up
- ☐ when the service station is overstocked with oil

19864

71

when the oil level shows that oil has been used up

72

The experienced serviceman knows that few cars use a lot of oil.

Before selling the quart of oil, you should: (CHECK TWO)

- ☐ ask the customer how long it's been since the last oil change
- ☐ show the customer the dipstick if the oil on it is dirty
- ☐ spill a little oil on the fenders

19865

72

ask the customer how long it's been since the last oil change

show the customer the dipstick if the oil on it it dirty

73

You check a car's oil level and see that the engine needs one quart of oil.

What should you do?

- ☐ Add two quarts of motor oil right away.
- ☐ Don't tell the customer because he'll be angry.
- ☐ Ask the customer how long it's been since the last oil change.

73

Ask the customer how long it's been since the last oil change.

74

You have a good chance to sell a customer an oil change:

- ☐ if you write a note that says "change oil" and give it to the customer
- ☐ if you check the oil, see that it is dirty, and show the dipstick to the customer
- ☐ if you add more oil than the amount needed to fill the crankcase

19867

74

if you check the oil, see that it is dirty, and show the dipstick to the customer

75

SERVICEMAN

CUSTOMER

Is this serviceman likely to sell an oil change for the customer's car?

☐ yes

☐ no

The serviceman (☐ was ☐ was not) really interested in his customer's needs.

19868

75

no

was not

76

Before you sell a customer a quart of oil, find out if you can sell him:

- ☐ a new oil filter
- ☐ an oil change
- ☐ an oil can for the trunk of the car

76

an oil change

77

When checking the oil in a car, you should think about selling an _____.

1980

77

oil change

78

It is winter.

You check a radiator and see that the water-antifreeze mixture in the radiator is low.

You should:

- ☐ add water without telling the customer
- ☐ just forget about the problem
- ☐ sell the customer more antifreeze

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963-A

ACKNOWLEDGEMENTS

The original State Department of Education guide for safety in school shops, published in November, 1953, served well for many years the needs of Florida's industrial arts teachers and students. With the modernization of laboratories, new and different types of equipment, and increasing student enrollment, it has become necessary for the guide to be rewritten to accommodate these changes. The original publication was the work of:

Dr. G. W. Neubauer, University of Florida (now with the Division of Vocational, Technical, and Adult Education, Florida State Department of Education).

Dr. Wayne B. Hughes, National Safety Council, Chicago

Dr. Walter R. Williams, Jr., Director of Vocational Education and Consultant for Industrial Arts, Florida State Department of Education (now retired).

Consultants for the original guide included: Dr. Roy Bergengren, Donald Cole, Raymond S. Ginn, Lowery L. Haynes, Robert Holmes, Alfred Howard, Marshall Hurst, Robert Jamison, Bernard Kurland, Louis Masnin, Leon Mills, Michael Rubio, Joseph Strickland, John Tammeryn, Floyd Watson, Fred Wilder, Milan E. Wisen, George Wood, and Talmage Young.

Research on this new guide began in 1967 when Dr. Ralph V. Steeb and Professor James Bignell of the University of Tampa assembled and evaluated quantities of reference materials, many of which are included in the bibliography. The contributions of these many authors and agencies, made through their published materials, are gratefully acknowledged.

Additional consultive services were provided by:

Mr. E. R. Collins, Associate Commissioner for School Law, Florida State Department of Education

Mr. George F. Warren, Safety Supervisor, Department of Industrial Safety, Florida Industrial Commission

Mr. Bobby L. Johnson, Director, Inspections Division, Office of the Florida State Fire Marshall

Special thanks are due to the following organizations for permission to use portions of their materials:

American National Red Cross

California State Department of Education (Industrial Arts Safety Instruction, by Robert L. Woodward)

Industrial Commission of Ohio

National Safety Council

New York City Board of Education

Prakken Publications, Inc. (Teacher Liability in School-Shop Accidents, by Dennis J. Kigin)

1962

78

sell the customer more antifreeze

79

You have a good chance to sell antifreeze:

- ☐ when the weather is cold
- ☐ when customers tell you they are going south for the winter
- ☐ when winter servicing has already been done by another station

19872

79

when the weather is cold

80

The attendant in the picture is checking: (CIRCLE ONE)

battery power air pressure oil level

1987

80

air pressure

81

Tires should be kept at the correct air pressure.

You should check:

- ☐ all four tires
- ☐ just the front tires
- ☐ only a low tire

19874

81

all four tires

82

You check the air pressure of all four tires on a car because:

- ☐ the customer should buy whitewall tires
- ☐ each tire should have the correct air pressure
- ☐ each tire must have different air pressure

19875

82

each tire must have the correct air pressure

83

When checking tires for correct air pressure, you should look for: (CHECK TWO)

- ☐ dirt on the tires
- ☐ tires that look worn out
- ☐ rips or breaks in the tires

83

tires that look worn out

rips or breaks in the tires

84

What does the experienced attendant think of selling when he checks air pressure? (CIRCLE ONE)

new cars new taillights new tires new hubcaps

By checking his customer's needs, he will:

- ☐ make satisfied customers
- ☐ lose customers

84

new tires

make satisfied customers

85

CIRCLE the time when you can easily check
a car's headlights and taillights:

daytime noon on Sunday nighttime

1978

85

nighttime

86

When you work at a gas station at night, you should check each car's:

- ☐ differential assembly and driveshaft
- ☐ headlights and taillights
- ☐ wheel alignment and brakes

19879

86

headlights and taillights

87

When you see a burned-out headlight on a car, you should:

- ☐ sell the customer replacement bulbs
- ☐ tell the customer not to drive at night
- ☐ not bother the customer about it

This shows that you are:

- ☐ an experienced service station attendant
- ☐ an inexperienced service station attendant

19880

87

sell the customer replacement bulbs

an experienced service station attendant

88

You tell the customer if his car has a burned-out light because:
(CHECK TWO)

- ☐ the customer will buy a new light
- ☐ lights cost more than any other part for the car
- ☐ it is unsafe to drive with a burned-out light
- ☐ burned-out lights wear out the battery

INTRODUCTION

When an industrial arts teacher accepts a teaching position, he shoulders a great responsibility for the education and welfare of students in his classes. While he is dependent upon a hieracy of administrators, supervisors, and representatives of the people, the teacher nevertheless is the principal organizer and director of educational experiences and activities. The content, outcomes, and indeed the success or failure of that part of the educational program resides with the teacher. The professional teacher welcomes this responsibility and employs the latitude and trust invested in him to carefully select curricular materials and activities that will further the objectives of the school and departmental program. He will organize and conduct his classes in such a manner as to promote desirable outcomes and attitudes in his students.

In any industrial arts education program, one topic which the professional teacher will include is that of safety--not as a isolated or unrelated lecture but as an integral part of the total instructional program. This manual is intended to serve as a guide in helping the teacher accomplish this vital task. While intended primarily for the teacher, industrial arts supervisors, principals, superintendents, board members and others will find it a source of useful information.

Safety, or, more properly, a safety attitude or safety consciousness, is not something with which we are born or something which is "picked up" as an incidental part of education or experience. The human instinct for self preservation is, unfortunately, not a very strong instinct when everyday safety is considered, and almost everyone falls victim to "it can't happen to me" attitudes. The student must be educated in safety, generally and specifically, just as he receives education in other areas of endeavor. Obviously, the purposes of safety education are twofold: (1) to protect the student from injury while in the school shop or laboratory, and (2) to develop habits, attitudes, and perceptions which will help insure his safety throughout his lifetime.

This guide is not an entire safety program, nor does it pretend to tell the teacher much about how to teach safety. Rather, several general and specific rules and practices are presented in an effort to achieve a certain minimum coverage. The teacher is encouraged to use this manual as an aid in developing a comprehensive, integrated, safety program. A truly effective safety program is practiced regularly and naturally as part of the daily work.

The teacher will want to gloss through the manual prefatory to planning his safety program, but "shotgun" coverage is to be avoided. Instruction should be given when it is most timely and meaningful to the student. The program of safety must be tailored to the equipment, facilities, and students in each particular shop. Basic safety rules should be developed and posted for each machine and activity.

Student participation greatly increases the effectiveness of a safety education program. Students can and should be actively involved in planning and presenting programs, demonstrations, and other activities. If a pupil personnel system is employed, a safety "engineer" and committee can be of great help in promoting compliance with safety rules and procedures. This manual can be used by students as an educational aid, and teachers are encouraged to reproduce it in whole or in part for these purposes.

Finally, in addition to helping the teacher establish safe working conditions and develop safety knowledges, habits, and attitudes in his students, this manual is intended to provide the teacher with ideas for protection from liability. Due to the nature of the environment, some accidents will happen. The teacher can protect himself from suit by following the suggestions in this manual.

1963

88

the customer will buy a new light

it is unsafe to drive with a burned-out light

89

You will see when it is time to sell lights if you work at the service station during the:

- ☐ day shift
- ☐ morning shift
- ☐ evening shift

19882

89

evening shift

90

When you work in a gas station, you should:

- ☐ be alert for any chance to sell service or a part
- ☐ never help to build the station's sales and profits
- ☐ stay away from selling that will mean extra work

19863

90

be alert for any chance to sell service or a part

91

You are checking a car's oil and water.

CIRCLE TWO other parts you could check at the same time:

radio tone control sparkplug wires

fan belt steering gear

91

sparkplug wires

fan belt

92

You can easily make a quick check of the sparkplug wires and fan belt, but the three main things you check under the hood are: (CIRCLE THREE)

fan belt	oil level	battery
oil level	radiator water	horn
sparkplugs	battery	fan belt

19885

92

oil level

radiator water

battery

93

Which serviceman is doing something that should make a customer satisfied?

- ☐ serviceman A
- ☐ serviceman B

93

serviceman A

94

Serviceman A should make a customer satisfied because:

- ☐ he notices what a car needs
- ☐ he tries to avoid extra work
- ☐ he wastes the customer's time

94

he notices what a car needs

95

If something is wrong with a car, you should: (CHECK TWO CORRECT ANSWERS)

- ☐ just make a joke out of it
- ☐ tell the customer what is wrong
- ☐ mind your own business
- ☐ sell the customer the needed repairs

19888

95

tell the customer what is wrong

sell the customer the needed repairs

96

FAN BELT

RADIATOR AND RADIATOR HOSE

OIL LEVEL

SPARKPLUG WIRES

TIRE PRESSURE

BATTERY

When an attendant checks all of the above things carefully, he will make a s_____ customer.

19889

96

satisfied

97

An experienced service station attendant improves business at his gas station by:

- ☐ making wisecracks about the customers
- ☐ making a list of unusual complaints
- ☐ making extra sales of parts or service

19890

97

making extra sales of parts or service

98

A service station attendant should wear a:

- ☐ red shirt
- ☐ clean uniform
- ☐ tight uniform

19891

98

clean uniform

99

A service station attendant does not wear a dirty uniform because he wants to look cl _____ and n _____ on the job.

19892

99

clean neat

100

Service station attendants are always polite, but one thing they don't discuss with their customers is:

- ☐ roads and traffic
- ☐ cars and motors
- ☐ profits and costs
- ☐ sports

100

profits and costs

101

If a customer complains about the work being done on his car, you should:

- ☐ ignore what he is saying
- ☐ listen to what he is saying
- ☐ run him out of the station

101

listen to what he is saying

102

A service station attendant cleans a car's windshield:

- ☐ whenever he can find the time
- ☐ when the customer says, "...my windshield is dirty"
- ☐ every time a car pulls up to the gas pumps

19895

102

every time a car pulls up to the gas pumps

103

What should you do to a car when it pulls up to the gas pumps?

_____

19896

103

clean the windshield

104

An experienced service station attendant takes care of car needs for:

- ☐ every customer at the sation
- ☐ rich customers only
- ☐ customers who buy a full tank of gas

19897

104

every customer at the station

105

You should make each customer a satisfied customer by selling him the things his car _____.

19898

105

needs

106

When a service station attendant cleans a car's windshield, he should look for a chance to sell _____ _____ (what part).

19899

106

windshield wipers

107

The attendant told the customer about things he checked when he looked:

- ☐ in the lube chart
- ☐ under the car
- ☐ under the hood

19900

107

under the hood

108

Three things an experienced attendant checks under the hood of every car are:

_____

_____

_____

BIBLIOGRAPHY 75

1965

108

the oil level

the radiator

the battery

109

When checking the motor oil level, a service station attendant should think about selling an o _____ ch _____.

12902

109

oil change

110

An experienced service station attendant is always a salesman. When working at a station at night, he looks for a chance to sell _____.

19903

110

bulbs

111

Extra sales are made by service station attendants who:

- ☐ don't listen to the station manager
- ☐ stay alert
- ☐ complain to the customers

19904

111

stay alert

112

If you are an alert attendant, you can find ways to make

_____.

19905

112

sales

113

Being a good salesman causes you to get:

- ☐ a raise or promotion from the owner
- ☐ fired
- ☐ nothing at all

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE CORRECT ANSWERS.

1

You should always be _____ to service station customers.

2

The experienced service station attendant always sells the customer the things his car _____.

3

When wiping a car's windshield, you should think of selling _____ _____.

4

The experienced service station attendant always looks _____ and _____.

5

Never tell a customer about:

- ☐ station costs and expenses
- ☐ the cost of repairs to his car
- ☐ services the station offers

6

Experienced service station attendants never _____ when filling a gas tank.

7

Three things to be checked every time you make a gasoline sale are:

_____

_____

_____

8

When checking a car's oil, you see that a quart of motor oil should be added. Before selling the one quart of oil, try to sell the customer a _____ _____.

19910

9

Experienced service station attendants working at night always try to sell _____.

10

Every time you sell a customer gasoline, what other service should you give to his car? _____

PART I

SAFETY AND LIABILITY

1. Safety--Who's Responsible?

Scope of Responsibility

The responsibility for safety in industrial arts programs rests with many people, but most of this responsibility, both moral and legal, falls upon the teacher. The teacher's role is not, however, to be construed as a passive one, accepting whatever conditions he is given. Rather, as a professional person, he must not only provide a safety education program, but he must also keep his supervisors and administrators advised of the needs of his shop and program. Deficiencies, unsafe conditions, etc., should be reported in a professional manner, as a matter of written record, to the proper authorities. Unsafe equipment or conditions should cause that portion of the instructional program to be suspended until corrective action is taken. Written reporting does not excuse the teacher from liability in tort--it does, however, serve as evidence of his concern and good intentions.

Responsibility of the Parents

Parents should begin the safety education of their children at home, but their responsibility does not end there. It is also their responsibility, as taxpayers and parents, to concern themselves with the enactment of good school laws and to provide qualified personnel and quality equipment and facilities. The teacher should capitalize on the influence of the parents on the development of their children, and involve them in the safety programs of the school. Parent cooperation and interest are of the utmost importance.

Responsibility of the School Board

Legally, the school board is an instrumentality of the government and enjoys sovereign immunity--that is, it is immune to tort action. Nevertheless, the board should provide the financial support required for an effective program and then hire the most competent instructional personnel available to carry it out. Safety in industrial arts programs begins with an efficient facility, safe equipment, and proper materials. The provision of these items is the responsibility of the school board. Safety should never be subrogated to economy.

An interesting provision in the Florida School Law allows school boards to provide legal services for employees being sued, but cannot pay any damages awarded (230.234 Florida School Law).

Responsibility of the Administration

Administrative responsibility for school shop safety rests with all persons concerned with administration or supervision of the industrial arts program, from the state commissioner of education, the state consultants for industrial arts, district superintendents, industrial arts supervisors, to principals. The responsibility of these people is that of supporting the teacher with the information, facilities, tools, and equipment needed to conduct an on-going safety program and create a safe working environment in the industrial arts laboratory. The teacher, being closest to the student and the certificated subject specialist, is the one most responsible, not only for

ABSTRACT - This combination study guide and workbook for a basic auto mechanics course on driving regulations, part I, was developed under the Manpower Development and Training Act of 1962. Contents are presented in a very simple programed format providing questions and answers for students. Illustrations, diagrams, a pre-test, and a post-test are included. This document is one in a series of related documents available in this issue as VT 013 123-VT 013 146, and part of a series of programed remedial materials developed by Basic Systems, Inc. (GB)

AUTO MECHANICS COURSE

PRE-TEST BOOK 23: DRIVING REGULATIONS, PART I

A BASIC SYSTEMS PROGRAM

19915

1

What is the definition of a "motor vehicle" under New York State law?

- ☐ a gas-driven vehicle only
- ☐ a diesel-powered vehicle only
- ☐ a vehicle operated by any power other than muscular power
- ☐ a vehicle that has the motor up front only

2

In New York State, which motor vehicles are subject to the periodic inspection laws?

- ☐ all vehicles
- ☐ all vehicles over 1 year of age
- ☐ all vehicles over 4 years of age; and all vehicles recently transferred
- ☐ only vehicles that were transferred

3

When do registrations expire for passenger cars?

- ☐ January 1
- ☐ January 15
- ☐ January 31
- ☐ February 1

4

Why does New York State demand that every driver be licensed?

- ☐ because the law requires it
- ☐ because New York State needs money to build roads
- ☐ for the protection of the public
- ☐ to see that everybody that drives can read

19917

5

Who must accompany you when you practice driving under a learner's permit?

- ☐ a New York State licensed driver at least 18 years of age
- ☐ a licensed driver at least 18 years of age
- ☐ a duly licensed instructor in New York State
- ☐ a police officer from your precinct

6

How many total hours of practice driving should you have before you take your road test?

- ☐ at least 4 hours
- ☐ at least 10 hours
- ☐ exactly 12 hours
- ☐ at least 20 hours

19918

7

For what period of time are drivers' licenses normally issued?

- ☐ six months
- ☐ 1 year
- ☐ 2 years
- ☐ three years

8

In what county, outside New York City, is a Junior Operator's license not valid?

- ☐ Nassau County
- ☐ Suffolk County
- ☐ Sullivan County
- ☐ Westchester County

9

What is the application fee for a driver's license?

- ☐ $1.00
- ☐ $2.00
- ☐ $3.00
- ☐ $5.00

10

When applying for a license, who must bring proof of date of birth?

- ☐ people of all ages
- ☐ only those people under 21 years of age
- ☐ only those people over 21 years of age
- ☐ only those people applying for a junior operator's license

Name _____

Date _____

Starting time _____

Finishing time _____

19921

safety but for other aspects of the students' education. In order to carry out these large responsibilities, the teacher needs the unqualified support of the school administration.

The State Department of Education has the responsibility of providing leadership and direction to assist school districts in the development of practical safety programs. This leadership is expressed in bulletins, newsletters, and consultive services. The state consultant for industrial arts is to coordinate and promote the state-wide industrial arts safety program.

District superintendents and their administrative personnel must give their wholehearted cooperation in the establishment and continuance of a viable safety program. Procedures and county "machinery" to develop, maintain, and evaluate safety programs should be provided. Some items to be provided by the county are special individual equipment, adequately guarded and maintained power equipment, safe facilities, and the leadership required to motivate teaching personnel to maintain a successful safety program.

The county supervisor of industrial arts is part of the administration and has the specific task of directing safety programs through his teachers in shops and laboratories. Supervisors should provide guides, accident report forms, in-service education, equipment maintenance procedures, in-service information, and direct supervision of the safety program.

Responsibility of the Teacher

The main burden of responsibility for school shop safety and liability for accidents rests on the industrial arts teacher. The reasons for this are:

A. The teacher has a moral responsibility, dictated by his profession, to protect the welfare of his students and provide instruction and measures to create a safe working environment and safety consciousness.
B. The teacher is not a public school officer, and therefore is not protected by sovereign immunity. In fact, teachers may be held more closely accountable than ordinary laymen due to accepting, by virture of employment, professional responsibilities.
C. The teacher is governed by the common-law obligation that every person must so act, or use what he controls, so as not to injure another. The law requires that teachers exercise that care and prudence any reasonably prudent person would exercise in the same or similar situation.
D. Teachers are more closely involved with pupil activities than any other school staff members and are, therefore, named as defendants in cases alleging negligence. Persons held legally responsible are subject to payment of damages. It must be proven, however, that the negligence of the teacher was the proximate cause of the injury.
E. The teacher stands in loco parentis, which means "in the place of the parent." Teachers are parents pro tem and have some of the rights and duties of the parents--those related to education and training of pupils. Thus the teacher has the added requirement to act as a reasonable and prudent parent would.

The possibility of claims against the teacher for negligent action is great, due to the nature of pupil activities. Adequate pupil supervision and a planned safety program are necessary to escape the charge of negligence. Specific recommendations are presented in paragraph 3, below.

1967

1

INTRODUCTION

BEFORE YOU CAN DRIVE IN NEW YORK STATE YOU MUST PASS A WRITTEN TEST AND A ROAD TEST FOR A DRIVER'S LICENSE.

WHEN YOU TAKE THE ROAD TEST, DRIVING SKILL IS WHAT COUNTS. WHEN YOU TAKE THE WRITTEN TEST, YOU NEED TO KNOW THE RIGHT ANSWERS TO MANY QUESTIONS.

THIS BOOK AND BOOK 24 WILL PREPARE YOU FOR THE WRITTEN TEST.

NO ANSWER NEEDED

GO ON TO THE NEXT PAGE

1

NO ANSWER NEEDED

2

These are
MOTOR VEHICLES:

These are
NOT motor vehicles:

Everything on the road that is <u>not</u> a motor vehicle is operated by:

- ☐ gasoline
- ☐ muscle power
- ☐ special diesel fuel

19923

2

muscle power

3

In New York State, a motor vehicle must be operated by motor power.

CIRCLE the motor vehicle below:

19924

3

4

A vehicle operated by any power other than muscle power is called a m_____ vehicle.

19925

5

a vehicle operated by any power other than muscle power

6

In New York State all motor vehicles four years old or older must be inspected for safety.

Your five-year-old Pontiac could fail inspection because of a: (CHECK ALL CORRECT ANSWERS)

- ☐ broken spring in the back seat
- ☐ cracked windshield
- ☐ burned-out headlight bulb
- ☐ broken radio antenna

19927

6

cracked windshield

burned-out headlight bulb

7

A car or any vehicle with a cracked windshield, burned-out headlight or other serious defects fails safety inspection.

If you drive a car that has failed inspection you are:

- ☐ an experienced mechanic
- ☐ breaking the law
- ☐ assisting the law

*19928

7

breaking the law

8

The New York State law states that motor vehicles:

- ☐ are unsafe if more than four years old
- ☐ must be inspected for safety if they are more than four years old
- ☐ must never be sold

19929

8

must be inspected for safety if they are more than four years old

9

Your car fails inspection because the steering knuckles are worn out.

You pay to have new steering knuckles put in because:

- ☐ the owner of a car must keep it in safe operating condition
- ☐ you are ready to sell the car
- ☐ cars with new parts do not need to be inspected

19930

9

the owner of a car must keep it
in safe operating condition

10

Cars four years old or older must be inspected every year for:

- ☐ paint durability
- ☐ safety
- ☐ speed

19931

. Responsibility of the Student

The student himself bears a responsibility for his own safety. It is for him that all has been planned and provided. The program of safety education should be such that he comes to realize that it is his duty and responsibility to cooperate and develop sound safety habits.

While the philosophy of the safety education program should be such that students will come to realize that they are responsible for their own safety, in school and out, the teacher is not excused from liability if a student commits an act he (the student) knows to be unsafe. The reason for this is that the teacher, being a professional educator, is expected to know the vagaries of his pupils' minds. The teacher is not actually responsible for what happens to his pupils, but he is responsible for the reasonable consequences of his own acts with regard to pupils. The students immaturity must also be taken into account. He may realize that a particular act is dangerous, but he may not appreciate the amount of danger or realize the consequences of committing an unsafe act. For these reasons, contributory negligence on the part of the pupil is seldom a factor in releasing the teacher of liability.

2. Philosophy of Safety Education

The fundamental purpose of a safety program is to insure safety and prevent pupils from being injured. The teacher has a moral, professional responsibility to safeguard and educate those who have been placed in his trust. Students cannot be expected to act and behave with concern for their safety and that of others since they lack experience and maturity. The teacher, in accepting employment, accepts the responsibility for seeing that a safe working environment is created and that safety instruction and evaluation are an integral part of the instructional program.

A second purpose concerns the economic factor, both for the teacher and his pupils. Injuries to pupils may impair their future earning power and restrict the avenues for employment or personal enterprise which they could normally expect. This would create a hardship not only for the individual but also for his family. The teacher must protect himself and his family and prevent loss due to litigation or judgment. Even though the teacher may be exonerated of liability, legal services can be very costly.

3. Liability

The central purpose of a safety program is to protect and educate students and provide a safe working environment. An adequate safety program will not only result in a low accident rate, however, but will also serve to protect the teacher from judgment in the event of a law suit. The following fundamental rules should be religiously followed by the teacher:

A. Provide adequate supervision at all times. Never leave a class unattended. If it is absolutely necessary to be out of the room, shut off power to machines and try to have a qualified person watch the class for you. Check with your principal on what to to before this need arises.

B. Behave as a reasonable and prudent person would under the same or similar circumstances.

C. Develop a sound safety education program as an integral part of the course of instruction. Formulate clear, basic rules and

CACI 1968

10

safety

11

Who is responsible for the safe operating condition of your motor vehicle?

- ☐ your mechanic
- ☐ you
- ☐ your father
- ☐ the Department of Motor Vehicles

19932

11

you

12

You must have a car inspected if if has just changed owners or if it is 4 years old or older.

BERNIE

Does Bernie need to have his car inspected? ☐ yes ☐ no

A 1963 Impala must be inspected in:

☐ 1966

☐ 1967

☐ 1968

19933

12

yes

1967

13

When the owner of a car sells it to another person, we say that the car has been transferred.

A car is transferred when it is:

- ☐ bought
- ☐ destroyed
- ☐ repaired

19934

13

bought

14

If a car is 4 years old or has just been transferred, it must be:

- ☐ bought
- ☐ inspected
- ☐ repaired

19935

14

inspected

15

In New York State, what motor vehicles are subject to the periodic inspection laws?

- ☐ all vehicles
- ☐ all vehicles over 1 year of age
- ☐ all vehicles over 4 years of age or those recently transferred
- ☐ only vehicles that have been transferred

19936

15

all vehicles over 4 years of age or those recently transferred

16

A policeman stops your car and says to you, "Let me see your registration."

You show him:

- ☐ a copy of the safety regulations for drivers
- ☐ your ownership papers
- ☐ the serial number on the engine

19937

16

your ownership papers

17

All vehicles in New York State are registered with the Motor Vehicle Bureau.

If you own a motorcycle and a car, you must:

- ☐ register either the car or the motorcycle
- ☐ keep the motorcycle in Connecticut
- ☐ register both the car and the motorcycle

19938

17

register both the car and the motorcycle

18

Every year cars must be registered before January 31.

If it is January 9, 1964, the year on your car registration should be:

- ☐ 1962 or 1963
- ☐ only 1964
- ☐ 1963 or 1964

19939

18

1963 or 1964

19

Registration (ownership papers) for a car must be renewed every year.

The final date for getting a new registration is:

- ☐ January 31
- ☐ February 31
- ☐ July 4
- ☐ your birthday

19940

19

January 31

20

After January each year, every car owner in New York should have a:

- ☐ new car
- ☐ new registration
- ☐ parking regulation notice

19941

regulations and enforce them rigidly.

D. Give adequate instruction in the proper, safe use of all machines, tools, and equipment. Supervise student use of all such items closely to make certain your instruction has been effective.

E. Insist that guards be provided which meet industrial standards. Insist that guards be used.

F. Insist that eye protective devices be worn as prescribed by Florida law.

G. Provide protective clothing for special hazards and insist that it be used. Regular personal clothing should be proper for the particular job or situation (e.g. ties, rings, etc. should not be worn around machinery).

H. Maintain the entire facility (plant and equipment) in proper condition. Items beyond the scope of repair by the teacher should be reported in writing to the proper authority. Copies of all such reports should be preserved. Danger signs or "out of order" signs should be posted until repairs are made.

I. Toxic and flammable materials must be clearly labeled and properly stored.

J. Continue to develop a professional understanding of your students, with regard to maturity level, health, background, personality, coordination, attitude, etc. Check the cumulative records of each student as early as possible in the school year. Physical or behavior problems should be taken up with the proper school personnel and with parents. Insist that you be consulted before any students with handicaps are assigned to you (epileptics, hard of hearing, partially sighted, behavior problems, etc.)

K. Activities should be carefully selected to suit the students with regard to maturity level, coordination, etc.

L. Teach by example--by word and by deed.

4. Liability Insurance

Liability insurance can be obtained at low cost from the American Industrial Arts Association or the Florida Education Association. In addition to these group plans, individual companies offer liability insurance which the teacher may want to investigate.

The question of whether taking out liability insurance is tantamount to admitting liability should not be of concern, because teachers are named in suits whether they are insured or not. In view of the reasonable cost of most insurance policies, no teacher should be without the protection they afford. A finding against the teacher as the result of a negligence suit could be a financial disaster. As previously stated, Florida School Law (230.234) authorizes school boards to provide legal services to employees being sued, but does not allow payment of damages.

22

ALL MOTOR VEHICLES IN NEW YORK MUST BE REGISTERED.

THE LAW ALSO STATES THAT ANY DRIVER OF A MOTOR VEHICLE MUST HAVE A DRIVER'S LICENSE OR A LEARNER'S PERMIT.

NO ANSWER NEEDED

GO ON TO THE NEXT PAGE

19943

22

NO ANSWER NEEDED

23

If one did not need a driver's license to drive in New York, this is probably what would happen:

State law requires drivers to have licenses to increase:

- ☐ accidents
- ☐ safety
- ☐ highway taxes

19944

23

safety

24

To drive a motor vehicle you must have a driver's license or a learner's permit.

CROSS OUT the name of the vehicle in the list below that can be operated without a license:

truck

taxi

car

motorcycle

bicycle

19945

24

~~bicycle~~

25

To get a driver's license you must take a written test and a road test.

You get a driver's license if:

- ☐ you are old enough and pass the tests
- ☐ you write the Motor Vehicle Bureau a letter
- ☐ you get a perfect score on the written test

19946

25

you are old enough and pass the tests

26

Licensed drivers:

- ☐ are the fastest drivers on the road
- ☐ know something about good driving
- ☐ don't care about other drivers

19947

26

know something about good driving

27

Bad drivers do not get licenses, which means that:

- ☐ there are too many taxi drivers
- ☐ the public is protected against bad drivers
- ☐ bad drivers get police protection

19948

27

the public is protected against
bad drivers

28

Drivers licenses protect the public because:

- ☐ license fees pay police salaries
- ☐ only good drivers can get and keep drivers' licenses
- ☐ women are not allowed to drive in New York City

19949

28

only good drivers can get and
keep drivers' licenses

29

Why does New York State demand that every driver be licensed?

- ☐ because it needs money to build roads
- ☐ for the protection of the public
- ☐ to get everyone's picture in the state files

19950

PART II

CAUSES OF ACCIDENTS

There is an old saying which still applies--accidents don't just happen, they are caused. A conscientious teacher will endeavor to write and teach a "water tight" safety program, but in spite of his best efforts, accidents may still occur. Part of the job of teachers and supervisors is to discover causative factors before they produce accidents and take whatever corrective action may be necessary.

There are three major categories of hazards which contribute to accidents:

(1) Unsafe physical facilities
(2) Unsafe practices
(3) Unsafe personal factors[1]

While an element in any one of these categories could be responsible for an accident, two or more categories are generally involved. The following checklists will help to identify items needing correction. Changing enrollments, course offerings, new materials, pupil differences, equipment additions, etc., dictate that the total enviornment be under constant scrutiny.

1. Physical Facilities Checklist

A. Building
(1) Ceiling height
(2) Floor type and condition
(3) Adequacy of illumination
(4) Plumbing and heating pipes and equipment
(5) Windows: protection from breakage; opening, closing, and holding devices
(6) Doors: size, swing, operation
(7) Stairways and balconys: railings, non-slip treads
(8) Adequacy of ventilation
(9) Adequacy of storage facilities
(10) Adequacy and condition of electrical distribution system
(11) Space allocations
(12) Personal facilities (restrooms, drinking fountains, wash-up facilities, etc.)
(13) Traffic flow
(14) Emergency exits
(15) Alarms and communications systems
(16) Fire prevention and extinguishing devices
(17) Interior color scheme
(18) Noise absorption factor
(19) Maintenance and cleanliness

B. Machinery and Equipment
(1) Placement and clearance
(2) Safety zones marked

1970

29

for the protection of the public

30

DRIVING IN NEW YORK AND ALL OTHER STATES IS LEGAL ONLY IF YOU HAVE A DRIVER'S LICENSE.

DRIVING WITHOUT A LICENSE IS AN OFFENSE THAT CAN COST YOU A BIG FINE OR EVEN A JAIL SENTENCE.

NO ANSWER NEEDED
GO ON TO THE NEXT FRAME

19951

30

NO ANSWER NEEDED

31

Suppose YOU are 18 years old and have just been issued your driver's license.

Your 14 year-old brother Willie says: "Hey, I can drive a car. Let me borrow your license."

Should you lend Willie your new license?

- ☐ yes
- ☐ no

19952

31

no

32

May your driving license be used by another person?

- ☐ only if he has the same name
- ☐ no
- ☐ only if he has paid half the fee
- ☐ only on weekends

19953

32

no

33

A driver's license can only be used by the owner of the license — the person who passed the tests.

A man says to you: "I can sell you a driver's license for $5.00." The so-called license he is trying to sell is:

- ☐ a temporary license
- ☐ a learner's permit
- ☐ an illegal license

19954

33

an illegal license

34

CIRCLE the vehicles in the list below that must have a New York State registration and safety inspection:

automobile motorcycle bicycle sled

19955

34

automobile motorcycle

35

According to the New York State Bureau of Motor Vehicles, a motor vehicle is any vehicle that:

- ☐ can carry three or more persons
- ☐ has a V-8 engine only
- ☐ does not run by muscle power

19956

35

does not run by muscle power

36

A vehicle operated by any power other than muscle power is called a:

- ☐ primary vehicle
- ☐ diesel tractor
- ☐ motor vehicle

19857

36

motor vehicle

37

You have a job and have just bought your first car.

WRITE the name of the person who is reponsible for the safe operating condition of the car:

_____

19958

37

_____

(Your own name should be written down because you are responsible for the car you own!)

38

You just bought a car that is five years old.

This car:

- ☐ doesn't need inspection because you are only the second owner
- ☐ can be inspected anytime because you got it from a dealer
- ☐ must be inspected right away because it has just been transferred

19959

38

must be inspected right away
because it has just been transferred

39

Motor vehicles that are transferred (sold) or are more than four years old must be inspected for:

- ☐ safety
- ☐ engine performance
- ☐ manufacturing standards

(3) Non-skid floors around machines
(4) All pulleys, belts, gears, blades, and cutters guarded with approved devices in excellent condition (See "Regulation for Guarding Machine Points of Operation", Chapter 1855-11, and "Regulation for Guarding Mechanical Power Transmission Apparatus" Chapter 1855-9, Rules of the Florida Industrial Commission)
(5) All cutting blades and knives sharp and secure
(6) All machines in good condition, properly maintained and lubricated
(7) All switches guarded. Magnetic type switches on all major machines
(8) All machines properly wired and grounded
(9) All hand and portable power tools in good condition and grounded
(10) All machines are of the highest quality available consistent with financial resources
(11) Adequate local illumination
(12) Safety precautions and rules conspicuously posted near each machine

C. Housekeeping
(1) Care of floors, stairs, aisles
(2) Care of rags and waste
(3) Storage and handling of oils, solvents, and other flammables
(4) Effectiveness of clean-up methods or procedures
(5) Storage of raw stock
(6) Project storage
(7) Cleanliness of light fixtures and windows
(8) Effectiveness of tool storage methods
(9) Adequacy of dust and fume removal equipment

2. Unsafe Practices Checklist

A. Unsafe Teacher Practices
(1) Teacher lacks knowledge of certain tools and machines
(2) Preliminary instruction is inadequate
(3) Follow-up is inadequate
(4) Students are inadequately supervised
(5) There are gaps in safety instruction and/or testing
(6) Students are allowed to play in shop
(7) Students or others work unsupervised in the shop after normal hours
(8) Teacher is not aware of or does not enforce eye-safety and other laws and regulations
(9) Teacher does not set a "safety example"
(10) Machines are not checked before allowing operation
(11) Teacher does not keep administrators aware of safety needs
(12) Teacher does not maintain adequate safety records

B. Unsafe Student Practices
(1) Students engage in "horseplay" or other nonsense
(2) Students do not heed instruction
(3) Students fail to develop a positive attitude toward safety
(4) Students do not dress properly

1971

39

safety

40

In New York State, which motor vehicles are subject to the periodic inspection laws?

- ☐ all vehicles
- ☐ all over 1 year of age
- ☐ all vehicles over 4 years of age; or those recently transferred
- ☐ only vehicles which are transferred

19961

40

all vehicles over 4 years of age; or those recently transferred

41

Registrations for passenger cars expire in the first month of each year.

Your registration expires:

- ☐ on December 31
- ☐ on January 31
- ☐ on February 1

19962

41

on January 31

42

All passenger car registrations expire on January 31 every year.

Your car is legal in New York:

- ☐ if you keep it in safe parking garages
- ☐ if you register it in someone else's name every year
- ☐ if it has an up-to-date registration

42

if it has an up-to-date registration

43

Registrations for passenger cars expire every year on:

- ☐ your birthday
- ☐ January 1
- ☐ January 31
- ☐ February 1

19964

43

January 31

44

In New York, if you own a motor vehicle you must have a registration.

Driving a motor vehicle in New York requires:

- ☐ a vote registration card to show residence
- ☐ a license
- ☐ high school graduation certificate
- ☐ knowledge of traffic

19965

44

a license

45

MATCH the following:

A. driver's license	1. _____ one-way streets
B. reckless driving	2. _____ protection of public
	3. _____ accidents

19966

45

1. -

2. A

3. B

46

The law in New York states that all drivers must be licensed because:

- ☐ outlaws from other states can be arrested
- ☐ licensed driving protects the public of New York
- ☐ license fees pay for the construction of highways

19967

46

licensed driving protects the public of New York

47

A licensed driver in New York can never:

- ☐ drive late at night in rural areas
- ☐ lend his driver's license to someone else
- ☐ lend his automobile to someone else
- ☐ transport furniture in an automobile

19968

47

lend his driver's license to someone else

48

May your driving license be used by another person?

- ☐ only if he has the same name
- ☐ only if he pays you for the license
- ☐ yes, if driving conditions are safe
- ☐ no

19969

48

no

49

Before you can get a driver's license, you get a LEARNER'S PERMIT.

When you have a learner's permit, a licensed New York driver who is 18 years old or older can help you with:

- ☐ parking problems
- ☐ practice driving
- ☐ an application for a license

19970

(5) Students take short cuts or hurry too much
(6) Students lack normal judgment
(7) Students are absent too much
(8) Students sometimes omit use of guards
(9) Students achieve poorly on safety tests

3. Unsafe Personal Factors Checklist

A. Each student should be observed carefully and records checked for indications of problems involving:

(1) Sight
(2) Hearing
(3) Coordination
(4) Strength and range of motion
(5) Epilepsy
(6) Nervousness
(7) Hypertension
(8) Disease or contagion
(9) Mental aberration
(10) Poor attitude

B. The Teacher should apply the same checklist to himself and obtain a yearly basic physical examination.

1972

49

practice driving

50

With a learner's permit, you can do practice driving for your road test.

The road test and the written test must be passed:

- ☐ to get a high school diploma
- ☐ before you are 21 years old
- ☐ to get a driver's license

19971

50

to get a driver's license

51

A learner's permit allows you to:

- ☐ drive out of state but not in New York
- ☐ drive with a qualified driver accompanying you
- ☐ drive cars and motorcycles only

19972

51

drive with a qualified driver accompanying you

52

MATCH the following:

A. requires registration

B. requires learner's permit

1. _____ practice driving

2. _____ motor vehicle

3. _____ license renewal

52

1. -

2. B

3. A

53

Before you start practice driving you must have:

- ☐ an old car
- ☐ a learner's permit
- ☐ a high school diploma

19974

53

a learner's permit

54

When you get behind the wheel and start practice driving you must:

- ☐ ask a policeman to help you
- ☐ be with a New York licensed driver who is 18 or older
- ☐ be with someone from your family who is at least 21 years of age

19975

54

be with a New York licensed driver who is 18 or older

55

A driver with a New York license who is at least 18 years old:

- ☐ can take the road test for you
- ☐ must accompany you when you do your practice driving
- ☐ must sit in the back seat while you drive

19976

55

must accompany you when you do your practice driving

56

Who must accompany you when you are practicing driving under a learner's permit?

- ☐ a New York State licensed driver at least 18 years of age
- ☐ a licensed driver at least 18 years of age
- ☐ a duly licensed instructor in New York State
- ☐ a police officer from your precinct

19977

56

a New York State licensed
driver at least 18 years of age

57

When you go to take the road test, you must be with a licensed driver 18 years old or older.

This driver must have a license from:

- ☐ Pennsylvania
- ☐ New Jersey
- ☐ New York

19978

57

New York

58

A New York State licensed driver must go with you when you take:

- ☐ the road test
- ☐ the written test
- ☐ the traffic signal test

19979

58

the road test

59

Who must be with you when you appear for the road test for your driver's license?

- ☐ your parent or guardian
- ☐ your high school teacher
- ☐ a New York State licensed driver at least 18 years of age
- ☐ a licensed driver from any state at least 18 years of age

19980

PART III

PROVIDING FOR SAFETY

1. Safety Instruction

A planned, approved program of safety instruction involving general shop safety and specific safety instruction is necessary. Further, the plan must be implemented--taught and evaluated. The best time to teach safety is when the operation or skill is taught. Safety should be an integral part of all instruction. Repetition and reinforcement are necessary to build habits. In planning and teaching for safety, review the "5 E'S" of safety in the front of this manual.

Safety regulations should be developed for each shop, each machine and each hazardous operation. Merely handing out or posting these regulations cannot, however, replace proper and adequate instruction. The teacher must set an example by following regulations and safe practices zealously and cheerfully.

A safety pledge, while legally worthless in a lawsuit, is nonetheless a worthwhile medium for emphasizing the students role in safety. Even minors tend to respect the obligations inherent in a pledge and signature.

Pledge cards, safety test results, anecodatal records and similar information should be maintained in a student file system. This sort of information provides a constant source of evaluative material to assess the effectiveness of instruction and is a source of evidence of sincere intent in the event of a suit following a student injury.

A regular shop safety report or letter is indispensible in maintaining a safe shop. The proper supervisor or administrator should be informed of strengths, weaknesses and needs. File copies should be maintained chronologically. Any machine, device, or area that is unsafe to use should be blocked off or otherwise secured and a statement to this effect made in the report. Teachers should flatly refuse to use, or permit to be used, any unsafe item, such as a circular saw with a broken guard, etc.

Depending upon the size of the school and the extent of industrial arts activities, a safety coordinator may be in order. This will simplify and refine channels of communication for the department.

A safety foreman and/or a safety squad should be a part of the pupil personnel system. This helps to make the students realize their responsibility for their own safety. Students can also, in addition to observing the work of others and inspecting equipment, take charge of the safety bulletin board, safety displays, and other related activities.

2. Organizing the Laboratory

The success of industry lies in organization. Random movement, uncoordinated action, lost motion, and so forth, spell loss and danger. The school industrial arts laboratory should be reflective of industry with regard to organization. Several factors are to be considered:

a. The general arrangement of the shop should suggest orderliness and neatness. Material flow directions should be apparent.

b. Students should be assigned to work stations.

1973

59

a New York State licensed driver at least 18 years of age

60

A New York State licensed driver at least 18 years of age must be with you: (CHECK ALL CORRECT ANSWERS)

- ☐ when you are repairing your car
- ☐ when you are practicing driving under a learner's permit
- ☐ when you appear for the road test for your driver's license
- ☐ to prove to the Motor Vehicle Bureau that you are old enough to drive

19981

60

when you are practicing driving
under a learner's permit

when you appear for the road
test for your driver's license

61

You take a road test to show that you have:

- ☐ a smooth running car
- ☐ driving endurance
- ☐ driving skill
- ☐ experience in driving in heavy traffic

19982

61

driving skill

62

Driving skill is demonstrated when you take:

- ☐ an eye examination
- ☐ a safety quiz
- ☐ a road test

19983

62

a road test

63

What is required in the road test for a driver's license?

- ☐ knowledge of the English language
- ☐ one-handed driving
- ☐ driving skill
- ☐ dodging any tricks the examiner pulls

19984

63

driving skill

64

Driving skill is needed to pass the road test.

The best way for you to get driving skill is to:

- ☐ ride the bus and watch traffic
- ☐ read "Road and Track" magazine
- ☐ practice driving

19985

64

practice driving

65

Practice driving is the best way to learn to drive.

You must do your practice driving: (CHECK ALL CORRECT ANSWERS)

- ☐ after dark
- ☐ after you get a learner's permit
- ☐ before the winter months when the weather is bad
- ☐ with a New York licensed driver at least 18 years of age

19986

65

after you get a learner's permit

with a New York licensed driver
at least 18 years of age

66

You should do twenty (20) hours of practice driving:

- ☐ before you take the road test
- ☐ after you take the road test
- ☐ if you want to become a taxi driver

66

before you take the road test

67

New York State recommnds that 20 hours of practice driving be done to:

- ☐ get more cars on the road
- ☐ keep traffic speed under 35 mph
- ☐ get learners to improve their driving skill

19988

67

get learners to improve their driving skill

68

The sign shows that practice driving with a driving school instructor will take at least:

- ☐ 10 hours
- ☐ 15 hours
- ☐ 20 hours
- ☐ 25 hours

19989

c. Material storage, distribution, and handling should be routinized for efficiency and safety.

d. Decentralized tool storage should be employed. Centralized storage areas, supply areas, locker areas, project storage areas, etc. should be observed closely for accident hazards due to crowding. Certain procedures, such as time staggering, may reduce congestion.

e. Time-use plans should be established for heavily used machines to avoid students having to stand around and wait for a particular machine.

f. An emergency warning and communication procedure is essential. The warning may be a bell, whistle, horn, or other device, but students must be trained to pay absolute attention when it sounds. Procedures for fire, explosion, storm, injury, and other events should be established and practiced.

3. Teaching Aids

A safety education program must be "spiced" with a variety of audio-visual aids to maintain its appeal. The National Safety Council, the state industrial commission, insurance companies, industries, and others provide many free items. The following types of aids should be included in presenting safety instruction:

a. Posters: Choose carefully and change regularly. Don't "wallpaper" the lab with posters--they become meaningless this way.

b. AV materials: Films, filmstrips, slides, photographs, recordings, viedotape, etc.

c. Tests and Quizzes: Not only as a check on understanding of safety instruction, but also as a learning device.

d. Instruction sheets and project sheets: Written procedural materials should always include pertinent safety precautions.

e. Suggestion box: Encourages student participation in safety. Suggestions should be considered by the class, not by the teacher alone. Suitable recognition should be given for adopted suggestions. This can be an industrial arts club project.

4. Facilities Organization

The arrangement, organization, and maintenance of the physical plant and its equipment is of inestimable importance in the total safety program. Good "housekeeping" and "a place for everything and everything in its place" are basic to safety. The Physical Facilities Checklist on page 5 will assist in identifying potential problems.

5. Pupil Personnel System

While many teachers debate the efficacy of student personnel systems, the fact remains that an effective safety program cannot be had without student involvement. Regardless of what method or system is used, students should be made to feel that shop cleanup and housekeeping are for reasons of safety and are the workmanlike thing to do. Organizations such as the following can be utilized to advantage:

69

driving practice

70

How many total hours of practice driving should you have before you take your road test?

- ☐ 4 hours
- ☐ 10 hours
- ☐ 20 hours
- ☐ 12 hours

19991

70

20 hours

71

When you go to take the road test for your driver's license, you must:

- ☐ be with a New York licensed driver at least 18 years old
- ☐ throw away your learner's permit
- ☐ show that you own your own car

19992

71

be with a New York licensed driver at least 18 years old

72

Driving licenses are issued for three years to New York State residents who:

- ☐ pass a written test or a road test
- ☐ pass a written test and a road test
- ☐ pass a driving course in high school

19993

72

pass a written test and a road test

73

Drivers' licenses are issued for three years.

If you get a license when you are 18 years old, you must have the license renewed:

- ☐ when you drive to another state
- ☐ before January 31 on alternate years
- ☐ when you are 21 years old

19994

73

when you are 21 years old

74

MATCH the following:

A. car registration renewal

B. driver's license renewal

1. _____ October 1

2. _____ January 31

3. _____ every three years

74

1. -

2. A

3. B

75

For what period of time are drivers' licenses issued?

- ☐ 3 months
- ☐ 6 months
- ☐ 1 year
- ☐ 3 years

19996

75

3 years

76

A special driver's license called a JUNIOR LICENSE is issued to younger drivers who pass the tests.

Drivers with junior licenses are:

- ☐ twelve year-old boys with a lot of money
- ☐ boys under fifteen who must drive to school
- ☐ girls and boys sixteen or seventeen years old

76

girls and boys sixteen or seventeen years old

77

In New York most drivers who are sixteen or seventeen get a special license called:

- ☐ a junior instructor's license
- ☐ a private driving permit
- ☐ a junior license

77

a junior license

78

How old must you be before you can obtain a junior operator's (driver's) license?

- ☐ eighteen
- ☐ twenty-one
- ☐ sixteen
- ☐ seventeen

19999

78

sixteen

79

Joe has a Junior Operator's License.

He CAN use a car at night:

to drive to math class

if he needs a car to drive to trade school

He CANNOT use a car at night:

to drive to the movies

to take his girl for a ride

When can a junior operator drive at night?

- ☐ never
- ☐ only to go to school
- ☐ when there isn't much traffic

20000

Foreman or supervisor
Safety engineer
Sanitary engineer
Tool manager

Other duties to be assigned on some sort of rotating basis include:

Care of benches and vises
Care of specific machines
Care of personal items (books, clothing, etc.)
Storage of projects, stock, etc.
Scrap and waste handling

The duties of students assigned to these responsibilities should be clear. Check sheets should be posted or passed out.

6. Color

The effect of color on safety and efficiency is well known, and, in addition, an attractively painted facility improves the appearance and engenders interest in housekeeping. Proper color contrast reduces eye fatigue and tension and promotes better vision. The following is suggested by the American Standards Association:

RED - To identify fire protection equipment, danger, and emergency stops on equipment. Use on fire alarm boxes, fire extinguishers, fire hose connections, safety cans.

ORANGE - Used to alert and is the basic color for designating hazardous parts of machines or electrical equipment that might shock, cut, crush or otherwise injure. Use on exposed edges of cutting devices, pulleys, gears, interior surfaces of guards, transmission cases, fuse boxes.

YELLOW - Designates caution and is used to indicate hazards from stumbling, falling, tripping, bumping, and collision. Use for aisle markings, handrails, guardrails, barricades, protruding parts, low overhead projections, approach to stairs, and floor areas near open pits.

GREEN - Used in combination with WHITE, to identify first aid and safety equipment. Use on first-aid kits, safety bulletin boards, stretchers, personal protective equipment supply or storage areas.

BLUE - Indicates precaution and is used to mark equipment controls. Use for signs indicating that equipment is not to be used, electrical controls, valves, brakes, kilns, etc.

PURPLE - Denotes radiation hazards. Use for radiation warning lights and containers for radioactive material.

BLACK and WHITE - Use separately or in combination as strips or checks to indicate housekeeping areas. Use to denote location of waste containers, stair risers, white corners for rooms or passageways.

The interior of the laboratory and the machines and equipment can be painted in accordance with the suggestions offered by various paint manufacturers. There is no "standard" color coding system beyond that specified above, but judicious use of color can emphasize certain areas, reduce glare, improve

1975

79

only to go to school

80

Joe can drive alone to school at night if he has:

- ☐ a learner's permit
- ☐ a junior operator's license
- ☐ permission from the owner of the car

20001

80

a junior operator's license

81

When may a driver with a junior license drive at night?

- ☐ when accompained by a licensed driver over 18 years of age
- ☐ if he is a member of the National Guard
- ☐ never
- ☐ to go to school

20002

81

to go to school

82

This map shows where you can NOT use a junior operator's license, day or night.

One place is NASSAU county.

What is the other? _____

20003

82

New York City

83

In New York City and in Nassau County:

- ☐ a junior operator's license is not valid
- ☐ a regular learner's permit is not valid

20004

83

a junior operator's license is not valid

84

In what county, outside New York City, is a junior operator's license not valid?

- ☐ Westchester
- ☐ Nassau
- ☐ Suffolk
- ☐ Sullivan

20005

84

Nassau

85

If Harold did not take the driver education course, he would have to wait until he was _____ (how old).

20006

85

18 (years old)

86

If you pass an approved driver's education course in high school, you can:

- ☐ drive without insurance
- ☐ get an operator's license under 18
- ☐ get an operator's license under 21

20007

86

get an operator's license under 18

87

To obtain a regular operator's license a person under 18 years of age must:

- ☐ write a letter to the Commissioner of Motor Vehicles
- ☐ show that he has above average skills
- ☐ pass an approved driver training course at a junior or senior high school that he attends
- ☐ pass the driving test the first time

20008

87

pass an approved driver training course at a junior or senior high school that he attends

88

Before you take the road test for a driver's license you should practice driving for at least:

- ☐ ten days in winter and ten days in summer
- ☐ 20 hours
- ☐ 48 hours
- ☐ two years

88

20 hours

89

You do at least twenty hours of practice driving:

- ☐ before you can get a learner's permit
- ☐ after you get a learner's permit
- ☐ after you pass the written test at the License Bureau

20010

illumination, and generally create more pleasant working conditions.

7. Fire Prevention and Extinguishment

Fire may seem a remote possibility, but it has been responsible, together with explosion, for the nation's worst school disasters. Those responsible for the school should seek the help of the local fire department, insurance carrier, state fire marshall, and others in eliminating the cause of fires and assessing extinguishment methods. Much of the work in school shops involves the use of fire, heat, and flammable materials. Three factors are necessary to cause fire: (1) oxygen (2) fuel (3) temperature high enough to cause ignition. To prevent or extinguish fire, one or more of these three factors must be controlled or eliminated.

There are four general classifications of fires based on the types of extinguishing media necessary. The chart on the following page lists the classes of fires, the types of materials, and the methods to be used for extinguishing fires.

The following factors should receive close attention in planning a fire prevention program:

Gas - All types of gases, oxygen, acetylene, natural, propane, butane, etc., represent a hazard. All equipment, piping, regulators, and ignitors should receive periodic and careful inspection by a qualified person. Students must receive thorough instruction before using these types of equipment. Matches should not be used for igniting gas-fired equipment.

Housekeeping - Rubbish, waste, and other debris must be cleaned up and removed from the shop daily and disposed of in suitable containers outside of the shop.

Electrical Equipment - Motors and other devices should be kept clean and properly maintained. All wiring should be done by a qualified person. All electrical equipment should be included in periodic inspections.

Matches and Smoking - Although it may be assumed that students do not smoke in class, teachers, custodians, adult students and visitors might. Smoking in laboratories should be strictly prohibited.

Spontaneous Combustion - This is probably the most prevalent cause of school shop fires. Oily or paint-soaked rags or clothing left in student lockers are a great hazard. Dust, lint, and oil collecting in ducts and flues can also ignite spontaneously. Safety containers should be provided for rags and waste and they should be emptied daily. Students must be instructed and supervised closely to prevent these types of fires.

Open Flames - Open flames are involved in welding, forging, forming and other heating operations. Fireproof materials around the work area and suitable clothing will aid in the prevention of most fires. However, the use of portable equipment involves high fire danger and all precautions should be taken, including having an extinguisher of the proper type ready at hand.

Heated Surfaces - Heated surfaces on furnaces, flues, heating devices

 1978 ۱۹۷۸

89

after you get a learner's permit

90

How many total hours of practice driving should you have before you take your road test?

- ☐ at least 4 hours

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

90

at least 20 hours

91

When you drive to the place where you take your road test you should bring along:

- ☐ paper and pencil
- ☐ a N. Y. licensed driver at least 18 years old
- ☐ a New York State Driver's Manual

20012

91

a N.Y. licensed driver at least 18 years old

92

A New York State licensed driver at least 18 years old should be in your car: (CHECK TWO)

- ☐ when you are making repairs on the car
- ☐ when you appear for the road test
- ☐ after you get your driver's license
- ☐ when you drive using a learner's permit

20018

92

when you appear for the road test

when you drive using a learner's permit

93

Who must accompany you when you are practicing driving under a learner's permit?

- ☐ a New York State licensed driver at least 18 years of age
- ☐ any licensed driver at least 18 years of age
- ☐ a duly licensed instructor in New York State
- ☐ a police officer from your precinct

93

a New York State licensed driver at least 18 years of age

94

When you are trying to get a license, you show your driving skill:

- ☐ by driving through heavy traffic
- ☐ when your reaction speed is tested
- ☐ when you take the road test

20015

94

when you take the road test

95

The written test for a license requires correct answers.

The road test requires:

- ☐ fast reflexes
- ☐ a fast car
- ☐ driving skill
- ☐ courage

20016

95

driving skill

96

The road test must be taken by:

- ☐ all women applying for drivers' licenses
- ☐ everyone who wants to get a driver's license
- ☐ people who live in the country where there are only a few cars

20017

96

everyone who wants to get a driver's license

97

What is required in the road test for a driver's license?

- ☐ knowledge of the English language
- ☐ one-handed driving
- ☐ driving skill
- ☐ dodging any tricks the examiner pulls

20018

97

driving skill

98

A learner's permit costs 50¢.

An application for a driver's license costs $2.00.

A driver's license costs:

- ☐ twice as much as a learner's permit
- ☐ three times as much as a learner's permit
- ☐ four times as much as a learner's permit

20019

FIRE CLASSES AND EXTINGUISHING AGENTS

Class	Types of Materials	Extinguishing Agents
A	Ordinary materials, such as wood, paper, excelsior, rags, rubbish	Water, for its quenching and cooling effect. Hose, pump, or soda-acid extinguishers, or multi-purpose dry chemical extinguishers
B	Flammable liquids, such as gasoline, oil, kerosene, grease, paints, thinners	Limit air supply through the use of dry chemical, multi-purpose dry chemical, CO^2, or foam. Water fog nozzles may be used in certain circumstances. Do not use solid streams of water.
C	Fires in or near electrical equipment	Non-conducting agents must be used, such as dry chemical, CO^2, compressed gas
D	Combustible metals, such as magnesium, titanium, zirconium, lithium, sodium	Specialized techniques and equipment are necessary. If you use these materials, consult your fire department or the fire marshall.

NOTE: Do Not Use Carbon Tetrachloride Extinguishers. Fumes From Carbon Tetrachloride Are Deadly.

1977

98

four times as much as a learner's permit

99

In New York State you must pay a fee for:

- ☐ a learner's permit but not a driver's license
- ☐ a learner's permit and a driver's license
- ☐ only a driver's license, provided you pass the tests

20020

99

a learner's permit and a driver's license

100

What document costs less than $1.00?

- ☐ a driver's license application
- ☐ a learner's permit
- ☐ a diploma from a driving school

20021

100

a learner's permit

101

Your learner's permit cost 50¢.

Your driver's license application cost $2.00.

You passed the tests, and got a driver's license!

The total cost to you of getting a license was:

- ☐ $1.50
- ☐ $2.00
- ☐ $2.50
- ☐ $3.00

101

$2.50

102

In some states (New Jersey, Pennsylvania) drivers must pay each time they are issued a new license, but this is not the case in New York.

In New York, you only pay for your license:

- ☐ if you fail the tests and have to take them again
- ☐ when it is first issued to you
- ☐ when you change your address

102

when it is first issued to you

103

In New York you have your license renewed (every three years) without paying, but you must pay for a brand new license.

You'll need a brand new license if:

- ☐ you get taller and gain weight
- ☐ you lose the old one
- ☐ you buy a car

20024

103

you lose the old one

104

DON'T LOSE YOUR LICENSE!

THE COST OF REPLACING A LOST LICENSE IS $3.00.

The cost of a replacement license is:

- ☐ less than the cost of a learner's permit
- ☐ more than the cost of an original license
- ☐ the same as a license application fee

104

more than the cost of an original license

105

Your learner's permit cost you 50¢.

Your driver's license application cost you $2.00.

You don't have to pay the state more money unless:

- ☐ you drive outside of New York City
- ☐ you lose your license and have to get a new one
- ☐ you move to a new address in the city

20026

105

you lose your license and have to get a new one

106

25¢

50¢

$2.00

$3.00

$5.00

A driver's license application costs _____

A learner's permit costs _____

A replacement license costs _____

106

$2.00 (driver's license application)

50¢ (learner's permit)

$3.00 (replacement license)

107

After you get a driver's license, you will not have a renewed license issued to you for three years.

If you get a license in 1965, you must renew this license before:

- ☐ 1967
- ☐ 1968
- ☐ 1970

107

1968

108

What is the fee for a learner's permit?

- ☐ fifty cents
- ☐ seventy-five cents
- ☐ one dollar
- ☐ two dollars

What is the application fee for a driver's license?

- ☐ $1.00
- ☐ $2.00
- ☐ $3.00
- ☐ $5.00

and light bulbs can be the cause of fires if flammable or combustible materials are close enough to absorb sufficient heat to cause combustion. Care should be taken to insure that all such devices are properly installed, especially with respect to clearances and barrier materials.

Molten Metal -Molten metal will ignite any flammable material with which it comes in contact. Precautions should be taken to provide a flame-proof environment in foundry areas and also to provide flame-proof clothing. Additional precautions are to be found in the section dealing with foundry operations.

Volatile Liquids - Paints, varnishes, lacquers, petroleum products, solvents and similar volatile materials are frequent sources of fire and/or explosion. The liquid itself does not burn, but heat causes vaporization, and the vapors of these liquids are easily ignited by sparks from electrical devices, static electricity, or metal objects striking together or, or course, open flames. Vapors are generally heavier than air and may travel along the floor for considerable distance before they are ignited and flash back to the source. Tight metal containers, flameproof cabinets, color coding, and strict storage and handling procedures are necessary. See also, "Fire Prevention: Flammable or Combustible Liquids," Chapter 5A-16 of the Rules of the State Fire Marshall.

In addition to the foregoing, it is necessary that all persons in the shop or laboratory know exactly what to do in case of fire. The general rules established by the principal should, of course, be followed. In addition, students should be given instruction on the following:

A. How and when to turn in a fire alarm.

B. How to extinguish fires and how to determine whether extinquishment should be attempted.

C. What to do in the event of alarm, such as turn off all machines, disconnect power at main switch, turn off gas values and torches, etc.

D. How to leave the building.

8. Controlling Electrical Hazards

Everyone is familiar with electricity, but few people really understand it. Consequently, many misconceptions are prevalent with regard to the changes associated with the use of electrical devices. The most common misconception is that voltage kills. Actually, while a certain amount of voltage is required, it is current (electron flow, measured in amperes) that does the damage. The amount of current that flows is governed by the applied voltage, the resistance of the body, and the nature of the ground. The amount of current required to kill is very small--generally less than one-half ampere. Cases are on record of deaths resulting from one-tenth ampere or even less. That this is not a great amount of current can be seen by comparing it to that which an ordinary 100 watt light draws--nearly one ampere.

The part of the body through which the current flows determines whether death or injury results. A leg to leg circuit, for example, would probably not be as damaging as an arm to leg or head to arm circuit. If the current passes through one or more of the vital organs, severe shock

108

fifty cents

$2.00

109

In New York State you must have your driver's license renewed:

- ☐ every three years
- ☐ after thirty years
- ☐ eventually

20030

109

every three years

110

COMPLETE this jingle:

"Renew your license every three years for free,

But don't lose your license or you'll have to pay _____"

20031

110

three ($3.00)

111

For what period of time are drivers' licenses issued?

- ☐ 6 months
- ☐ 1 year
- ☐ 2 years
- ☐ 3 years

111

3 years

112

What is the fee for a new license if you lose your license?

- ☐ $1.00
- ☐ $3.00
- ☐ $5.00
- ☐ $6.00

20033

112

$3.00

113

When you apply for a driver's license you must bring $2.00 <u>and</u> a baptismal certificate or birth certificate.

A baptismal certificate or birth certificate is written evidence of:

- ☐ only your last name
- ☐ your place of birth but not your name
- ☐ your place of birth, full name and age

113

your place of birth, full name and age

114

One good reason why the Department of Motor Vehicles wants to see evidence of age is:

- ☐ old people make better drivers than young people
- ☐ no person under sixteen years of age can get a regular license
- ☐ applicants who are twenty-one or older take an easier test than younger applicants

20035

114

no person under sixteen years of age can get a regular license

115

When applying for a license, who must bring proof of date of birth?

- ☐ people of all ages
- ☐ only those people under twenty-one years of age
- ☐ only those people over twenty-one years of age
- ☐ only those people applying for a Junior Operator's license

20036

115

people of all ages

116

How old must you be before you can obtain a junior operator's license?

- ☐ eighteen
- ☐ twenty-one
- ☐ sixteen
- ☐ seventeen

116

sixteen

117

A junior license holder can drive <u>any</u> <u>time</u> during the day, but at night he can only drive:

- ☐ if his father is in the car
- ☐ to go to work
- ☐ to go to school

117

to go to school

118

A junior operator can drive at night only if he must drive to school.

Ordinarily a junior operator only drives:

- ☐ early in the morning before sunrise
- ☐ during daylight hours
- ☐ to and from night school

20039

damage or death is certain.

The severity of shock will be determined by several factors:

(1) the rate of current flow as mentioned above
(2) the path of current flow, also mentioned
(3) the frequency of the current
(4) the phase of the heart cycle at the moment of shock.
(5) the physical and psychological condition of the victim

In addition to nerve shock, the victim may sustain burns, tissue and nerve destruction, or other injury due to falling or other secondary effects.

Causes of electrical accidents are generally due to : (1) defective equipment, (2) unsafe work practices, and (3) lack of knowledge. Most accidents involving electricity can be prevented by:

(1) Obtaining quality electrical equipment
(2) Inspecting regularly and maintaining all electrical equipment, wiring, and devices
(3) Grounding all motors and portable tools
(4) Using isolation transformers in electronic work
(5) Teaching safe and proper work practices
(6) Teaching the rudiments of electricity and electrical safety to all students

9. Protecting eyesight

Our one single most valuable asset is undoubtedly our eyesight. But we take sight so much for granted and treat it so carelessly that many states have seen fit to pass special legislation to protect eyesight in schools. Florida's eye safety law is reproduced on the following page. Note that it is still the responsibility of the teacher to make certain that protective devices are worn where hazards exist. While the principal purpose of the law is to preserve sight, it should be obvious that a teacher who does not rigidly enforce the law in his shop will be virtually defenseless if an eye injury occurs.

Sometimes, as in pouring metals, it is advisable to wear two types of protection--spectacle type safety glasses and a plastic face shield. Plastic goggles or face shields alone cannot be relied upon to stop flying drops of molten metal.

A procedure for periodic disinfection of eye protective devices is recommended. One method is to wash all parts with soap and water then rinse well to remove all soap. Swab thoroughly or completely immerse all parts for 10 minutes in a solution of germicidal deodorant fungicide. Air dry all parts to retain the germicidal residue which will retain its effectiveness for some time. A germicidal cabinet can also be used.

The ideal practice is for each student to have his own safety glasses which he can use throughout his school career in shop and chemistry courses. Each shop, however, must have available a sufficient type and quantity of devices to protect the largest number of students (and visitors) who may be engaged in performing or observing the activities indicated in the law.

1979

118

during daylight hours

119

When may a junior operator drive at night?

- ☐ when accompanied by a licensed driver over 18 years of age
- ☐ if he's a member of the National Guard
- ☐ never
- ☐ for credit-bearing classes or activities at school

20040

119

for credit-bearing classes or activities at school

120

When does a junior license holder ordinarily operate a motor vehicle?

- ☐ only in New York City, or within Nassau County limits
- ☐ only when driving for compensation
- ☐ only between the hours of sunrise and sunset
- ☐ only going to and from school

20041

120

only between the hours of sunrise and sunset

121

If you live in New York City you might as well forget about getting a junior operator's license because:

- ☐ only one hundred junior licenses are issued in the city each year
- ☐ driving in New York City is dangerous
- ☐ junior licenses are not valid in New York city and Nassau County

20042

121

junior licenses are not valid in New York City and Nassau County

122

When you apply for a junior license you must:

- ☐ show proof that you own a safe car
- ☐ show proof of your date of birth
- ☐ show that you are a skillful driver

20043

122

show proof of your date of birth

123

In what county outside New York City is a junior driver's license not valid?

- ☐ Nassau
- ☐ Suffolk
- ☐ Sullivan
- ☐ Westchester

123

Nassau

124

Drivers who drive for commercial reasons (to make money) need a special license called a CHAUFFEUR'S LICENSE.

CROSS OUT the driver on the list below who does not need a chauffeur's license:

taxi driver

Sunday driver

bus driver

20045

124

Which vehicle cannot legally be driven with an operator's license?

- ☐ motorcycle
- ☐ passenger car
- ☐ taxi

20046

125

taxi

126

To operate a motorcycle and a passenger car, you only need:

- ☐ an operator's license
- ☐ an unclassified chauffeur's license

20047

126

an operator's license

127

If you only have an operator's license, what vehicles can you legally drive?

- ☐ commercial tractor trailers
- ☐ buses
- ☐ regular passenger cars and motorcycles
- ☐ regular passenger cars only

20048

127

regular passenger cars and motorcycles

128

To drive a taxi, you need:

- ☐ an operator's license
- ☐ a chauffeur's license
- ☐ a taxi license

20049

Revision of Eye Protection Device Law as Passed
by Legislature

(Major Changes Underlined)

CHAPTER 67-181

House Bill No. 754

AN ACT relating to public schools; revising and amending sections 228.002, 230.302(3), 231.361, 231.40(1), 232.45, 233.09(5)(b), 236.071(1) and 237.17, Florida Statues.

Section 5. Section 232.45, Florida Statutes, is amended to read:

232.45 Eye protection devices required in certain vocational and chemical laboratory courses--

(1) Eye protective devices shall be worn by students, teachers, and visitors in courses including, but not limited to, vocational or industrial arts shops or laboratories and chemistry, physics or chemical-physical laboratories, at any time at which the individual is engaged in or observing an activity or the use of hazardous substances likely to cause injury to the eyes.

(a) Activity or the use of hazardous substances likely to cause injury to the eye includes:

1. Working with hot molten metals;

2. Milling, sawing, turning, shaping, cutting, grinding or stamping on any solid material using power equipment;

3. Heat treatment; tempering or kiln firing or any metal or other materials;

4. Gas or electric arc welding;

5. Caustic or explosive materials;

6. Working with hot liquids or solids including chemicals which are flammable, caustic, toxic or irritating.

(2) The boards of public instruction of the several counties may furnish plano safety glasses or devices for students and teachers and shall furnish such equipment for all visitors to such classrooms or laboratories, or may purchase such plano safety glasses or devices in large quantities and sell them at cost to students and teachers, but shall not purchase, furnish or dispense prescription glasses or lenses.

(3) To implement and carry out the purpose of this act the boards of public instruction of the several counties are hereby given authority to promulgate rules and regulations to accomplish the purpose of the law.

(4) "Industrial quality eye protective devices" as used in this act means devices meeting the requirements of the American standard safety code for head, eye, and respiratory protection Z2, 1-1959, promulgated by the American Standards Association, Incorporated.

130

NO ANSWER NEEDED

131

What is the definition of a "motor vehicle" under New York State law?

- ☐ a gas-driven vehicle only
- ☐ a diesel-powered vehicle only
- ☐ a vehicle operated by any power other than muscle power
- ☐ a vehicle that has the motor up front

20052

132

you

133

In New York State, what motor vehicles are subject to the periodic inspection laws:

- ☐ all vehicles
- ☐ all vehicles over 1 year of age
- ☐ all vehicles over 4 years of age or those recently transferred
- ☐ only vehicles that have been transferred

20054

133

all vehicles over 4 years of age or those recently transferred

134

When do registrations expire for passenger cars?

- ☐ January 1
- ☐ January 15
- ☐ January 31
- ☐ February 1

20055

134

January 31

135

Why does New York State demand that every driver be licensed?

- ☐ because the law requires it
- ☐ because it needs money to build roads
- ☐ for the protection of the public
- ☐ to see if everybody who drives can read

20056

135

for the protection of the public

136

May your drivers'license be used by another person?

- ☐ only if he has the same name
- ☐ no
- ☐ only if he has paid half the fee
- ☐ only on weekends

20057

136

no

137

Who must accompany you when you are practicing driving under a learner's permit?

- ☐ a New York State licensed driver at least 18 years of age
- ☐ a licensed driver at least 18 years of age
- ☐ a duly licensed instructor in New York State
- ☐ a police officer from your precinct

20058

137

a New York State licensed driver at least 18 years of age

138

Who must be with you when you appear for the road test for your driver's license?

- ☐ your parent or guardian
- ☐ your high school teacher
- ☐ a New York State licensed driver at least 18 years of age
- ☐ a licensed driver from any state at least 18 years of age

PART IV

SAFETY RULES

On the following pages are general and specific rules for the use of the types of equipment commonly found in industrial arts laboratories. Each set of rules is on a separate sheet so that they can be easily reproduced and made available to students, posted, etc. Changes and additions should be made by the individual teacher, if necessary, in order to meet the needs of particular situations. Schools with graphic arts equipment may wish to print rules on heavy stock for posting by each machine or area.

Certain organizations and manufacturers have safety operation rules which are either free or available at nominal cost. Since safety must be "sold" to students, the most effective ways available should be used.

1981
0861

138

a New York State licensed driver at least 18 years of age

139

What is required in the road test for a driver's license?

- ☐ knowledge of the English language
- ☐ one-handed driving
- ☐ driving skill
- ☐ dodging any tricks the examiner pulls

20060

139

driving skill

140

How many total hours of practice driving should you have before you take your road test?

- ☐ 4 hours
- ☐ 10 hours
- ☐ 12 hours
- ☐ 20 hours

20061

140

20 hours

141

For what period of time are drivers' licenses normally issued?

- ☐ 3 months
- ☐ 6 months
- ☐ 1 year
- ☐ 3 years

20062

141

3 years

142

How old must you be before you can obtain a junior operator's license?

- ☐ seventeen
- ☐ eighteen
- ☐ twenty-one

20083

142

sixteen

143

In what county, outside New York City, is a junior operator's license not valid?

- ☐ Nassau
- ☐ Suffolk
- ☐ Sullivan
- ☐ Westchester

20064

143

Nassau

144

To obtain a regular operator's license a person under 18 years of age must:

- ☐ write a letter to the Commissioner of Motor Vehicles
- ☐ show that he has above average skills
- ☐ pass an approved driver training course at a junior or senior high school that he attends
- ☐ pass the driving test the first time

20065

144

pass an approved driver training course at a junior or senior high school that he attends

145

What is the fee for a learner's permit?

- ☐ fifty cents
- ☐ seventy-five cents
- ☐ one dollar
- ☐ two dollars

What is the application fee for a driver's license?

- ☐ $1.00
- ☐ $2.00
- ☐ $3.00
- ☐ $5.00

145

fifty cents

$2.00

146

When applying for a license, who must bring proof of date of birth?

- ☐ people of all ages
- ☐ only those people under twenty-one years of age
- ☐ only those people over twenty-one years of age
- ☐ only those people applying for a Junior Operator's license

20067

146

people of all ages

POST-TEST BOOK 23: DRIVING REGULATIONS, PART I

A BASIC SYSTEMS PROGRAM

20069

General Safety Rules for All Industrial Arts Areas

1. Secure approval from your teacher for all work that you plan to do.
2. Report all injuries to your teacher, however slight.
3. Wear proper eye protection as required by Florida law.
4. Wear appropriate clothing. Clothes should not be loose to catch in moving parts. Roll up sleeves, take off or tuck in ties, remove rings, watches and jewelry.
5. Keep hair away from moving parts. Wear a hair net if hair is longer than conventional length.
6. Observe limit lines around machines and traffic lanes.
7. Be alert to help others spot safety hazards and improper procedures.
8. Report to your teacher any equipment that does not work properly, makes odd noises, etc.
9. Be careful in handling and storing materials.
10. Keep your work area and machines you use clean, but don't use your hand to brush away chips. Brushes are available for all jobs.
11. Do not allow chips and litter to collect on the floor.
12. Wipe up spilled liquids at once and use an absorbent material if necessary to prevent slipping.
13. Keep doors and drawers closed.
14. Place oily rags and other combustible materials in safety containers.
15. Get help in handing long or heavy pieces of material.
16. Learn and follow instructions to follow in case of fire, hurricane, or other emergency.
17. Develop a receptive attitude toward safety instruction and cooperate in all matters related to safety in the school shop and elsewhere.

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

The amount you must pay when you apply for a driver's license is:

- ☐ $1.00
- ☐ $2.00
- ☐ $3.00
- ☐ $4.00

2

Before you take your road test you should take time for practice driving.

The recommended time is:

- ☐ ten hours
- ☐ a maximum of twelve hours
- ☐ twenty hours
- ☐ twenty-four hours at intervals during one week

3

If you own a car, your registration expires:

- ☐ every ten years, or when you sell the car
- ☐ every year on January 1
- ☐ every year on January 31
- ☐ every three years

4

You can not apply for a driver's license unless:

- ☐ you supply evidence of car ownership
- ☐ you show ability to handle a car in heavy traffic
- ☐ you show proof of date of birth
- ☐ you are 21 years of age, or older

5

Drivers' licenses are normally issued for a time period of:

- ☐ 1 year
- ☐ 2 years
- ☐ 3 years
- ☐ 4 years

6

It is a New York State law that every driver must be licensed:

- ☐ because cars are powerful and difficult to handle safely
- ☐ because driving courses are required in high school
- ☐ for the protection of the public
- ☐ for additional state money that comes from license fees

7

According to New York State law, a "motor vehicle" is:

- ☐ any vehicle that is manufactured in a factory
- ☐ only gas and diesel powered vehicles
- ☐ any vehicle operated by power that is not muscle power
- ☐ only vehicles with the motor located up front

8

A junior driver's license can not be used in New York City or:

- ☐ counties near New York City
- ☐ Nassau County
- ☐ Rochester, Syracuse, and Albany
- ☐ Westchester County

9

When you are practicing driving under a learner's permit, there must be someone in the car with you.

This person must be:

- ☐ a member of your family
- ☐ a licensed driver at least 18 years of age
- ☐ a driver with a New York license who is at least 18 years old
- ☐ a licensed instructor from a driving school

10

What motor vehicles in New York State must be inspected periodically?

- ☐ all vehicles regardless of age
- ☐ all vehicles more than two years old
- ☐ all vehicles over 4 years of age; or those recently transferred
- ☐ only vehicles which are transferred

1

The length of time it takes to stop a car is always determined by:

- ☐ the New York Bureau of Vehicle Standards
- ☐ brakes, road surface and weather
- ☐ the time since your car was last inspected
- ☐ a clean windshield

2

If you are following a car that is going 40 mph, your car should be:

- ☐ as close to the car ahead as possible
- ☐ as far away as the traffic allows
- ☐ closer than two car lengths from the car ahead
- ☐ at least four car lengths from the car ahead

3

When you are following a car on a highway or turnpike, the rule to remember is:

- ☐ drive faster than trucks and buses
- ☐ look out for litterbugs
- ☐ never lose sight of the car ahead
- ☐ don't follow close behind the car ahead — don't "tailgate"

20079

Safety Rules for Lifting and Handling Materials

1. Do not lift objects beyond your strength. Get help or use a lifting device. Do not risk back and abdominal injuries.

2. Check your footing before lifting. Feet should be placed firmly, not more than about 12" apart, with the weight of the body directly over the soles of the feet. The object to be lifted must be kept as close to the center of gravity of the body as possible. Keep arms and body straight. Lift with the legs, not the back.

3. Long objects should be carried with the front end down. Preferred practice is to have a person on each end.

4. Be careful of slivers when handling lumber, and get medical aid if you get a sliver in your hand. Wear gloves to handle rough materials.

5. Be careful not to set heavy objects down on your toes.

6. Pile or stock materials so that they do not slip, crush, or fall.

1983

4

If you must signal for help on the New York State Thruway, you should:

- ☐ flash your headlights on and off
- ☐ flash your brake lights on and off
- ☐ tie a white cloth to the left door handle of the car
- ☐ use a red cloth to flag down a passing car

5

What does it mean when the line in the middle of a highway is a broken line?

- ☐ the painting job isn't finished yet
- ☐ never drive over the line
- ☐ you may cross the line to pass if traffic permits
- ☐ the road is an interstate highway

6

Taillights on a car must be bright enough to be seen at night from a distance of:

- ☐ 400 feet
- ☐ 500 feet
- ☐ 600 feet
- ☐ up to one mile

7

At intersections, the rule about right of way is:

- ☐ trucks have the right of way before cars at all times
- ☐ all vehicles must stop at intersections
- ☐ vehicles making turns have the right of way
- ☐ cars on the right have the right of way

8

What is the distance needed to stop a car going sixty miles an hour?

- ☐ 100 feet
- ☐ 400 feet
- ☐ 500 feet
- ☐ 527 feet

20081

9

When you are overtaking a car at night, switch your headlights to low beam:

- ☐ when the car is twenty feet away
- ☐ if the car ahead slows down
- ☐ when the car ahead is 200 feet away
- ☐ when you can see the taillights on the car ahead

10

The headlights on a car must light up the road for a distance of:

- ☐ at least one mile
- ☐ about 250 feet
- ☐ at least 350 feet
- ☐ 1,000 feet

2

You are driving this car:

To make the car stop, you press the brake.

The brakes work well, but your stopping time might be affected by other things such as: (CHECK TWO)

- ☐ radio reception
- ☐ road surface
- ☐ daylight
- ☐ weather conditions

20084

2

road surface

weather conditions

3

The brakes on both cars are good.

Which car will take less time to stop?

- ☐ car A
- ☐ car B

20085

3

car A

4

When the road you are driving on is slippery, you need:

- ☐ less time to stop your car
- ☐ more time to stop your car
- ☐ power brakes to stop your car without skidding

20086-*

4

more time to stop your car

5

What conditions determine the length of time in which you can stop your car?

- ☐ windshield should be clean
- ☐ brakes, road surface and weather
- ☐ driver may get sleepy
- ☐ car must be periodically inspected

20087

5

brakes, road surface and weather

6

Bernie was going 40 miles per hour.

Pete was going 60 miles per hour.

Both drivers put on their brakes at the arrow (BRAKE PRESSED).

How far did Bernie's car at 40 mph go before it stopped? _____ feet

Pete's car at 60 mph went _____ feet.

20088

General Safety Rules for Hand Tools

1. Select the proper size and type of tool for the job.
2. Make sure cutting tools are sharp and that all tools are in good condition.
3. Keep your hands clean.
4. Handle edged and pointed tools with care. Point edges away from yourself and others while carrying and using.
5. Secure small work with a vise or clamp.
6. Never carry cutting tools in your pocket.
7. Lay tools near the center of the bench to keep them from rolling off or being knocked off.
8. Do not use tools for other than the purposes for which they were intended.
9. Know and follow the correct way to use each tool.
10. Wear eye protection when eye hazards exist.

6

120 (feet)

400 (feet)

7

Both drivers put on their brakes at the arrow.

Was Pete going faster than Bernie?

- ☐ yes
- ☐ no

Which car stopped first?

- ☐ Pete's car
- ☐ Bernie's car

20089

7

yes

Bernie's car

8

MATCH the following:

A. Bernie's car

B. Pete's car

1. _____ stopped after 50 feet
2. _____ stopped after 400 feet
3. _____ stopped after 120 feet

20090

8

1. —

2. B

3. A

9

Bernie was going 40 mph and stopped after 120 feet.

Pete was going 60 mph and stopped after:

- ☐ 400 feet
- ☐ 500 feet
- ☐ 600 feet

9

400 feet

10

at 40 mph: you stop after 120 feet

at 60 mph: you stop after 400 feet

You are driving down the street and see a stalled pie truck blocking the street 300 feet ahead.

Your car is going to be covered with pie if you're driving:

- ☐ 20 mph
- ☐ 40 mph
- ☐ 60 mph

20092

10

60 mph

11

MATCH the following:

A. 40 mph

B. 60 mph

1. _____ 120 feet to stop

2. _____ 400 feet to stop

3. _____ 500 feet to stop

20093

General Safety Rules for Power Tools

1. Do not use any machine until you receive instruction in its use and have received the teacher's permission.

2. Ask your teacher to check your setup.

3. Check adjustments before applying power.

4. Make sure others are clear before applying power.

5. Make sure guards are in place and functioning properly.

6. Start and stop your own machine. Remain with the machine until it has come to a dead stop.

7. Stay clear of machines being operated by others. Do not help unless asked.

8. Notify your teacher of improper operation, breakage, etc.

9. Disconnect power before oiling, cleaning, or adjusting.

10. Allow a minimum of 4" between your hands and saws, cutters, or moving parts.

11. Keep machine tables clear of tools, stock, and other items.

12. Keep the floor area around machines clear of scrap and chips.

13. Give the machine your absolute undivided attention while you are using it. Do not talk to others.

14. Never lean or lounge against any machine.

15. Know and obey all the safety rules for each machine.

16. Wear eye safety devices for all power machine operations. Require all observers to wear eye protection.

17. All power machines must be grounded.

18. If extension cords are used with portable power tools, use only cords with a ground wire.

1985

16

6

17

SPEED	CAR LENGTHS BETWEEN CARS
30 mph _____	3
40 mph _____	4
50 mph _____	5
60 mph _____	6

This chart shows the number of car lengths that you should keep between your car and the car in front of you.

The rule is that the distance should be:

- ☐ 1 car length for every 10 mph
- ☐ 1 car length for every 30 mph
- ☐ 2 car lengths for every 10 mph
- ☐ 2 car lengths for every 30 mph

20099

17

1 car length for every 10 mph

18

These drivers are keeping the correct distance apart.

Car number 6 is:

- ☐ three lengths behind car 5
- ☐ four lengths behind car 5
- ☐ five lengths behind car 5

20100

18

four lengths behind car 5

19

When you are driving, you should stay at least 1 car length behind the car in front of you for every _____ (how many) mph of your speed.

19

10

20

How many car lengths should you keep between you and the car in front of you if you are going 40 mph?

- ☐ one
- ☐ two
- ☐ four
- ☐ eight

20102

20

four

21

At least how far behind the car in front of you should you drive?

- ☐ 1 car length for every 10 mph
- ☐ 1 car length for every 40 mph
- ☐ 2 car lengths for every 10 mph
- ☐ 2 car lengths for every 40 mph

20103

21

1 car length for every 10 mph

22

A

B

Picture A shows Mike following Phil on the highway.

Picture B shows what happened when Phil had to stop suddenly.

Mike crashed into Phil because Mike was too:

- ☐ close
- ☐ far away
- ☐ sleepy

20104

22

close

23

Following too closely to the car in front of you is called TAILGATING.

ALL CARS ARE GOING 20 MPH

Which of the above drivers is guilty of tailgating?

- ☐ Chris
- ☐ Jack
- ☐ Gene

20105

23

Jack

24

Most highway accidents are caused by drivers who drive too closely to the car in front of them.

The cause of most accidents on the highway is:

- ☐ driving while intoxicated
- ☐ no headlights
- ☐ tailgating

24

tailgating

25

The cars in the drawing are going 60 mph on the New York Thruway.

Which car is tailgating? _____

How many car lengths should be between the two cars? _____

20107

25

car B

6

26

What should you consider when you are following another car on a highway?

- ☐ do not follow too closely; in other words, do not "tailgate"
- ☐ try to follow at exactly the same speed
- ☐ watch out for littering
- ☐ make sure you don't lose sight of the car

20108

Safety Rules for the Drill Press

1. Select the correct size and type of drill and be sure it is sharp.
2. Select the correct speed for the size drill and type of material. POWER OFF
3. Tighten drill securely in the chuck.
4. Remove the chuck key
5. Locate work carefully and clamp it securely in place or use a drill press vise if appropriate.
6. Determine whether a coolant should be used.
7. Double check setup before applying power.
8. Operate feed handle so that drill cuts evenly into the work.
9. Ease up on feed pressure when drill begins to break through.
10. Back drill out of the hole immediately.
11. Stop the drill press before attempting to remove chips. Use a brush, not your hand.
12. If the work comes loose or is seized by the drill, step quickly away. Shut off power if you can do so without danger to yourself. Summon your teacher.
13. Do not leave the machine until it has stopped.
14. Clean up the work table and the floor and return drills, coolants, clamps, etc. to their proper places.

1986

26

do not follow too closely; in other words, do not "tailgate"

27

A

B

If you follow a fire engine in the city, you should keep at least 200 feet behind it. In rural areas, you should keep 500 feet between your car and the fire engine.

In which picture is the driver keeping the correct distance behind a fire engine for a rural (country) area?

☐ picture A

☐ picture B

20109

27

picture A

28

"200 feet in the city; 500 feet in rural areas"

The above statement tells how far you must:

- ☐ park from fire hydrants
- ☐ stay in front of police cars
- ☐ stay behind fire engines

20110

28

stay behind fire engines

29

You are driving in Brooklyn. A fire engine is speeding ahead of you.

How far should you stay behind the engine?

- ☐ 200 feet
- ☐ 500 feet

20111

29

200 feet

30

"200 feet in the city; 500 feet in rural areas"

If you follow a fire engine, you must stay farther back:

- ☐ in the city
- ☐ in the country
- ☐ in an emergency

20112

30

in the country

31

A fire engine is on its way to a fire in a rural area.

How far behind the engine should you stay? _____ feet

When following a fire engine in the city, you should keep _____ feet behind it.

31

500 (feet)

200 (feet)

32

How closely may you follow a fire engine on its way to a fire?

- ☐ 200 feet in both city and rural areas
- ☐ 500 feet in both city and rural areas
- ☐ 200 feet in the city; 500 feet in rural areas
- ☐ 500 feet in the city; 200 feet in rural areas

20114

32

200 feet in the city; 500 feet in rural areas

33

There's no law that says you must follow a fire engine, but you must give a fire engine the right of way.

Right of way gives a fire engine:

- ☐ a police escort to all fires
- ☐ a clear lane through traffic
- ☐ clearance to drive on the sidewalk

20115

33

a clear lane through traffic

34

Official emergency vehicles have the right of way on any highway or street.

CIRCLE the emergency vehicles in the list below:

taxicab

bicycle

ambulance

moving van

fire engine

police squad car

35

pull over and stop so an emergency vehicle can pass

36

Who must give an emergency vehicle right of way?

- ☐ only truck drivers
- ☐ all drivers except politicians
- ☐ all drivers
- ☐ only pedestrians and taxicab drivers

20118

Safety Rules for the Wood Lathe

1. Ask your teacher to check your stock before your mount it in the lathe. Glued-up material should be closely inspected.

2. On larger pieces, remove corners (arrises) to reduce turning time and make turning safer.

3. Mount stock properly in the lathe and adjust tool rest.

4. Rotate the stock by hand before applying power.

5. Set lathe at slowest speed (See note 1 below)

6. Have your teacher check your setup.

7. Select proper turning tools and make sure they are sharp.

8. Stand to one side when starting the motor.

9. Stop frequently to check your work and move the tool rest to within 1/8" of work.

10. Never caliper or touch stock when rotating.

11. Remove tool rest when sanding or finishing.

12. Use only small rags folded into pads for finishing and polishing--never use long pieces of cloth.

13. When finished working, set the machine at its slowest speed, clean up the area and return all tools and accessories to their places.

Special Instructions for Spindle Turning

14. Make sure centers are properly imbedded in the stock.

15. Use oil or beeswax on the dead center.

16. Make sure tailstock is clamped firmly.

17. Rough stock down to cylindrical form at slow speed.

18. Check tail stock frequently for overheating.

19. Remove live center when finished.

(Note 1: The spindle speed of lathes with continuously variable speed can be changed only when the lathe is running. Such machines should be returned to the lowest speed before stopping. Change speeds slowly. Abrupt speed changes can throw the work out of the lathe or cause the faceplate to come off of the spindle.)

(more)

1987

36

all drivers

37

When you see or hear a vehicle with a flashing red light on, siren blowing or bell ringing, what should you do?

- ☐ give it the right of way
- ☐ speed up and drive on
- ☐ stop in your lane
- ☐ stop and direct traffic, if there is no police officer

20119

37

give it the right of way

38

What conditions determine the length of time in which you can stop your car?

- ☐ windshields should be clean
- ☐ brakes, road surface and weather
- ☐ driver may get sleepy
- ☐ car must be periodically inspected

20120

38

brakes, road surface and weather

39

You can stop your car in 400 feet when you go 60 mph.

You can stop in 120 feet when you go:

- ☐ 20 mph
- ☐ 30 mph
- ☐ 40 mph
- ☐ 50 mph

20121

39

40 mph

40

You should stay at least 1 car length behind the car in front of you for every:

- ☐ 5 mph
- ☐ 10 mph
- ☐ 15 mph
- ☐ 20 mph

20122

40

10 mph

41

200 feet in a city and 500 feet in a rural area are the distances you must:

- ☐ stay behind an ambulance
- ☐ stay in front of an ambulance
- ☐ stay behind a fire engine
- ☐ stay in front of a fire engine

20123

41

stay behind a fire engine

42

If you are driving and hear a siren from an emergency vehicle:

- ☐ give the vehicle the right of way
- ☐ speed up to stay close behind the fire engine
- ☐ speed up and drive home
- ☐ stop and direct traffic

20124

42

give the vehicle the right of way

43

It will take you 400 feet to stop your car if you are going:

- ☐ 40 mph
- ☐ 60 mph
- ☐ any speed over the speed limit

20125

43

60 mph

44

Car A is on the right of car B.

Which car is on the right of car 1? ____

20126

44

car 3

45

The cars labeled "B" have the right of way in the pictures above.

When you're driving, you give right of way to:

- ☐ cars to your left
- ☐ cars to your right
- ☐ cars that speed through intersections

20127

45

cars to your right

46

Which car has the right of way here?

- ☐ car A
- ☐ car B

20128

Special Instructions for Faceplate Turning

20. Stock should be cut to circular form on handsaw or jig saw.

21. Select proper size and style of faceplate.

22. Select proper size and number of screws.

23. Drill the correct size holes and set screws in tight.

24. Ask teacher to double check faceplate mounting.

25. Work should be rotated by hand after mounting and should not be off center.

26. Start at slowest speed.

27. Keep an accurate check on depth to avoid running the tool into the mounting screws.

28. Inspect mounting screws and backing block frequently.

29. If you are turning outboard with an outboard turning stand, be careful not to kick or bump the stand.

30. Never turn large diameter work at high speed.

46

car A

47

At intersection A the truck driver is letting the car (on his right) pass.

At intersection B there's an accident because the truck driver forgot about:

- ☐ turning on his lights
- ☐ right of way
- ☐ making a right turn

20129

47

right of way

48

What is the general rule with regard to right of way at intersections?

- ☐ The car going straight ahead has the right of way.
- ☐ The car on the main road has the right of way.
- ☐ The car on the right has the right of way.
- ☐ The car making a turn has the right of way.

20130

48

The car on the right has the right of way.

49

Above is a picture of a four-lane highway.

Which line should <u>never</u> be crossed by a car?

☐

☐

20131

49

50

A broken line:

- ☐ may be crossed when traffic permits
- ☐ should never be crossed

20132

50

may be crossed when traffic permits

51

Burney wants to drive in lane 4. Is this OK?

- ☐ yes
- ☐ no

Phil would like to drive into lane 2. May he do that?

- ☐ yes
- ☐ no

20133

51

yes

no

52

MATCH the following:

A. broken line

B. double solid line

C. garage line

1. _____ may be crossed when traffic permits

2. _____ should never be crossed

20134

52

1. A

2. B

53

1. a double solid line

2. a broken line

The line on a highway that may never be crossed is line number _____ .

20135

53

1

54

What does a broken line painted on the highway mean?

- ☐ You must not cross it at any time.
- ☐ You may cross it to pass, provided traffic permits.
- ☐ You may cross it to pass, even on hills.
- ☐ You must not cross it on weekends.

54

You may cross it to pass, provided traffic permits.

55

What does it mean when the painted line on the highway is a double solid line?

- ☐ You may cross it at any time.
- ☐ You may cross it only if you are on the main road.
- ☐ You must never cross it.
- ☐ You must never cross it, unless traffic permits.

20137

55

You must never cross it.

56

A blowout can be dangerous, especially if you are driving fast.

Blowouts can cause:

- ☐ accidents
- ☐ dim taillights
- ☐ higher speeds

20138

Safety Rules for Disc and Belt Sanders (Non-Portable)

1. Make sure that disc and/or belt is not torn or loose.
2. Make any adjustments before turning on the power.
3. Don't attempt to sand pieces which are too small to hold safely.
4. Sand only on the "down" side of the disc.
5. Keep work moving across the disc or belt.
6. Use moderate pressure to avoid burning the work and possibly having the work slip out of your hands.
7. Keep hands away from the abrasive surfaces.
8. Make sure dust pickup is working if machine is so equipped.
9. Allow machine to stop before leaving it.
10. Clean up the area.

1989

56

accidents

57

When a tire blows out, you should take your foot OFF the gas and hold the steering wheel STEADY.

Which driver is doing the things he should after a blowout?

- ☐ Barrie
- ☐ George

57

George

58

If you get a blowout when you are driving your car, you should:
(CHECK TWO)

- ☐ step on the gas
- ☐ take your foot off the gas
- ☐ hold the steering wheel steady
- ☐ turn the steering wheel

20140

58

take your foot off the gas

hold the steering wheel steady

59

You should: 1. take your foot off the gas

2. hold the steering wheel steady

when you have:

- ☐ an accident
- ☐ a blowout
- ☐ a tire change

20141

59

a blowout

60

How should you handle your car to prevent an accident when you have a blowout?

- ☐ Blink your lights to warn other drivers.
- ☐ Slam on your brakes to stop.
- ☐ Take your foot off the gas and hold the steering wheel steady.
- ☐ Warn other drivers by blowing your horn.

20142

60

Take your foot off the gas and hold the steering wheel steady.

61

If you have an accident or need help, there is a way to signal for help.

The driver shown above has signaled for help by:

- ☐ putting a flare behind his car
- ☐ tying a white cloth onto the left door handle
- ☐ turning on his parking lights

61

tying a white cloth onto the left door handle

62

This driver has tied a white cloth onto his left door handle to signal:

- ☐ for help
- ☐ that he is taking a nap

The sign in the picture tells you that this way of signaling is used on:

- ☐ Route 46
- ☐ the New York Thruway
- ☐ the Penn-Can highway

20144

62

for help

the New York Thruway

63

To signal for help on the New York Thruway, you should:

- ☐ blink your lights
- ☐ put a flag over the trunk
- ☐ put a flare behind the car
- ☐ tie a white cloth to the left door handle of your car

20145

63

tie a white cloth to the left door handle of your car

64

Which car is ready for night driving? _____ (WRITE LETTER)

When driving at night, you can see ahead if you:

- ☐ follow another car closely
- ☐ have your headlights on
- ☐ have your taillights on

20146

64

B

have your headlights on

65

Sunset is at 5:00 p.m. You turn on your headlights at 5:30 p.m. because the law requires that headlights be turned on one half-hour:

☐ after sunset

☐ before sunset

20147

65

after sunset

66

The law requires that you turn on your headlights one half-hour after the sun sets.

If sunset is at 6:30 p.m., then you should turn on your headlights at:

- ☐ 5:30
- ☐ 6:00
- ☐ 6:30
- ☐ 7:00

Safety Rules for the Woodworking Jointer

1. Do not attempt to joint stock less than 1/4" x 4" x 12" - check with your teacher.
2. Make adjustments before applying power.
3. Check the operation of the guard.
4. Use pushblock for small stock.
5. Ask your teacher to check setup for stop-cuts, beveling, tapering, and rabbeting.
6. Check depth-of-cut setting prior to starting the machine. Limit cuts to 1/8" or less.
7. Whenever possible, allow two fingers to ride along the top of the fence.
8. Feed stock slowly while holding it firmly. Consider grain direction.
9. Do not attempt to plane end grain without special permission.
10. Push stock far enough on each pass to allow the guard to close.
11. Be careful of your stance--as you feed the stock, do not lean forward and lose your balance or slip.
12. Allow the machine to stop before leaving it.
13. Return all adjustments to "normal" and clean up the area.

reel 25 1990

66

7:00

67

When does the law require that you turn on your headlights?

- ☐ one half-hour after sunset
- ☐ one half-hour before sunset
- ☐ one hour after sunset
- ☐ one hour before sunset

20149

67

one half-hour after sunset

68

One half-hour after sunset, you should turn on your:

- ☐ headlights
- ☐ parking lights

20150

68

headlights

69

Which car is not ready for night driving? _____

Parking lights are used for:

- ☐ overtime parking
- ☐ parking at night
- ☐ parking near intersections

20151

ED

056 238

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

69

B

parking at night

70

This picture shows when you use your parking lights alone.

Parking lights are on when you:

- ☐ drive in a well lighted area
- ☐ park on a road going with the traffic
- ☐ park on a road facing traffic
- ☐ stop at a toll booth

20152

70

park on a road facing traffic

71

When you are parked facing traffic, turn on your:

- ☐ headlights
- ☐ parking lights
- ☐ taillights

20153

71

parking lights

72

You should use your parking lights only when:

- ☐ parked in a parking lot
- ☐ parked on the road facing traffic
- ☐ parked on the road going with the traffic
- ☐ entering a four-lane divided highway

20154

72

parked on the road facing traffic

73

At night your taillights must be visible from 500 feet away.

You should be able to see the taillights on a car:

- ☐ 420 feet in front of you
- ☐ 501 feet in front of you
- ☐ 598 feet in front of you
- ☐ 629 feet in front of you

20155

73

420 feet in front of you

74

When you are not more than 500 feet behind a car at night, you should be able to see its:

- ☐ headlights
- ☐ parking lights
- ☐ taillights

74

taillights

75

For what distance must your taillights be visible at night?

- ☐ only 50 feet
- ☐ only 300 feet
- ☐ 500 feet
- ☐ 650 feet

20187

Safety Rules for the Planer (Surfacer)

1. Use only clean, nail-free lumber.
2. Make sure stock is about 1" longer than the distance between infeed and outfeed rolls. Never attempt to surface shorter stock.
3. Make adjustments only when machine is stopped (except for normal depth-of-cut adjustments between passes).
4. Adjust first cut to measurements taken at the thickest part of the board.
5. Limit cuts to 1/16" on wide stock to 1/8" on narrow stock.
6. Run thin stock (less than 1/4") through planer on top of a thicker, surfaced board.
7. Stand to one side of the throat when feeding or receiving.
8. Never look into the throat while machine is running.
9. Keep hands away from feed rolls and away from boards already gripped by feed rolls.
10. Never change depth-of-cut adjustment while a board is in the planer.
11. If a board gets stuck, turn off power and summon your teacher.
12. Work with a helper to receive stock and pass it back for further cuts.
13. Loose knots should be removed prior to surfacing.
14. If stock is wet, lubricate tables with wax or kerosene.

0681 1991

75

500 feet

76

Taillights let people behind you see your car.

Which lights let you see the road in front of your car?

_____

20158

76

headlights

77

At night your headlights should light up the road in front of you by at least 350 feet. Which of the above cars have headlights that are lighting up the right distance for night driving?

- ☐ Dick's car
- ☐ Mary's car
- ☐ John's car

20158

77

John's car

78

If your headlights are working, you should be able to see all objects on the road ahead up to a distance of:

- ☐ 150 feet
- ☐ 250 feet
- ☐ 350 feet
- ☐ 450 feet

78

350 feet

79

MATCH the following:

A. 350 feet

B. 400 feet

C. 500 feet

1. _____ headlights should light at night

2. _____ taillights should be visible at night

79

1. A

2. C

80

What is the distance that should be lighted by your headlights at night?

- ☐ 100 feet
- ☐ 250 feet
- ☐ 350 feet
- ☐ 500 feet

80

350 feet

81

When your headlights are on high beam, they look very bright and can "blind" other drivers who are coming toward you. This can cause accidents.

When another car is coming toward you, you should:

- ☐ blink your lights
- ☐ be sure your lights are on high beam
- ☐ dim your lights so you won't blind the other driver

81

dim your lights so you won't "blind" the other driver

82

Which car below has its headlights on low beam, or "dimmed":

- ☐ car A
- ☐ car B

82

car B

83

Drivers must dim headlights when 500 feet from an approaching vehicle.

You should switch your headlights to low beam when you are:

- ☐ 250 feet in back of a car
- ☐ 250 feet from a car coming toward you
- ☐ 500 feet from a car coming toward you
- ☐ 500 feet in back of a car

20165

83

500 feet from a car coming toward you

84

Dim your headlights when you are 500 feet from:

- ☐ an approaching car
- ☐ a car you are overtaking
- ☐ a car overtaking you

84

an approaching car

85

How close to an oncoming vehicle should you be before switching your headlights to low beam?

- ☐ 250 feet
- ☐ 350 feet
- ☐ 500 feet
- ☐ 520 feet

20167

Safety Rules for the Band Saw

1. Stock to be cut should have a flat surface.
2. Adjust blade guide to about 1/8" above surface of work.
3. Plan cuts to avoid backing out of kerf, if possible.
4. If necessary to back out of kerf, do so with saw stopped.
5. Feed material at a moderate speed, being careful to keep hands and fingers clear of blade.
6. Avoid pinching blade by turning too sharply.
7. If blade breaks, shut off power and summon your teacher.
8. Clear scraps from table only with saw stopped.
9. Have your teacher check resawing and other special setups before proceeding.

85

500 feet

86

You should switch your headlights to low beam when you are 200 feet from the car in front of you. Which of the above drivers should switch his lights to low beam?

- ☐ David
- ☐ Gene
- ☐ Mitch

20168

86

David

87

MATCH the following:

A. 200 feet

B. 350 feet

C. 500 feet

1. _____ low beam when overtaking a car

2. _____ low beam for an oncoming car

20169

87

1. A

2. C

88

How close should you be to a vehicle you are overtaking before switching your headlights to low beam?

- ☐ 200 feet
- ☐ 300 feet
- ☐ 400 feet
- ☐ 500 feet

20170

88

200 feet

89

Headlights should light up the road ahead by 350 feet.

Taillights should be seen for 150 feet farther.

How far should taillights be seen? _____

20171

89

500 feet

90

MATCH the following:

A. 200 feet

B. 350 feet

C. 500 feet

1. _____ taillights should be seen

2. _____ should be lit by headlights

20172

90

1. C

2. B

91

How far from an approaching car should you be before you dim your headlights? _____ feet

20173

91

500 (feet)

92

When two cars are approaching each other and are 500 feet apart, the headlights should be switched to low beam. This means that:

- ☐ both drivers should put their lights on low beam
- ☐ only the one driver should put his lights on low beam

20174

92

both drivers should put their lights on low beam

93

When you meet a car that has blinding lights:

1. look toward the right
2. keep your car near the right side
3. slow down

If you are moving at 40 mph, you should:

☐ go 60 mph so you won't have to see the lights as long

☐ go 30 mph to be safe

20175

93

go 30 mph to be safe

94

When you meet a car with very bright lights, look toward the right side of the road so that you:

- ☐ can see any signs that may be there
- ☐ can see the middle of the road
- ☐ won't be blinded by the bright lights

20176

94

won't be blinded by the bright lights

95

You meet a car with very bright lights. You should keep your car toward the right side of the road so that your car:

- ☐ will be in the middle of the road
- ☐ won't hit the other car

20177

Safety Rules for the Circular Saw

1. Saw only clean, nail-free lumber.
2. Select proper blade, make sure it is sharp, clean, and properly installed.
3. Check operation of guards. Ask your teacher for assistance if setup requires removal of guards.
4. Use ripping fence or miter gage. Do not use both except with a clearance block as directed by your teacher.
5. Never saw "freehand"--that is, without some guiding device.
6. Stand to one side rather than in line with the blade.
7. Use push sticks for stock under 6" in width.
8. Push stock yourself. Use a helper to bear off, but instruct him to only support the stock, not pull it.
9. Blade should not project over 1/8" above work.
10. Use support stands for long boards.
11. Use a featherboard as instructed.
12. Never reach over the saw.
13. Feed rapidly enough to make saw work. Don't jam stock into blade. Don't feed so slowly as to cause burning.
14. Return adjustments to normal and clean up the saw and area after the machine has stopped.

1993

95

won't hit the other car

96

You should slow down when you approach a car with blinding lights so that:

- ☐ you can see the lights longer
- ☐ you won't miss a turn-off
- ☐ you have better control of your car
- ☐ the other driver will see your lights longer

20178

96

you have better control of your car

97

When you meet a car with blinding lights, you should do three things.

You should look toward the:

- ☐ left
- ☐ right

and you should keep the car toward the:

- ☐ right side of the road
- ☐ left side of the road

and you should also:

- ☐ speed up
- ☐ slow down

20178

98

look toward the right side of the road, stay near it, and slow down

99

Low beams should be used when you are driving in fog because the low beams:

- ☐ do not blind other drivers
- ☐ do not let you see as far
- ☐ get rid of the fog
- ☐ let you see better

20181

99

let you see better

100

If you are driving in the fog, you should use:

- ☐ high beams
- ☐ low beams
- ☐ parking lights
- ☐ taillights

20182

100

low beams

101

Which car has the right of way?

- ☐ the car going straight ahead
- ☐ the car on the right
- ☐ the car turning to the left

20183

101

the car on the right

102

The broken line:

- ☐ must not be crossed at any time
- ☐ may be crossed at any time
- ☐ may not be crossed at night
- ☐ may be crossed to pass if traffic permits

20184

102

may be crossed to pass if traffic permits

103

SHADE IN the line on the highway that must never be crossed:

20185

103

a double solid line

104

When must you turn on your headlights?

- ☐ an hour after sunset
- ☐ a half-hour after sunset
- ☐ a half-hour before sunset

20186

104

a half-hour after sunset

105

The lights that you can see on the car in the drawing must be visible at night from a distance of:

- ☐ fifty feet
- ☐ one hundred feet
- ☐ five hundred feet
- ☐ half a mile

20187

Safety Rules for the Mortiser

1. Select and install proper size bit.
2. Clamp stock in place.
3. Make necessary adjustments for depth and lateral travel.
4. Keep hands away from chisel when power is on.
5. Feed rate should allow machine to cut easily.
6. Lift bit clear of work before moving table.
7. Check with your teacher if cutting is difficult or chisel burns.
8. When finished, remove bit and clean up the area.

105

five-hundred feet

106

When you tie a white cloth to the left door handle of your car on the New York State Thruway, you are:

- ☐ reporting a theft
- ☐ signaling for help
- ☐ signaling to pass

20188

106

signaling for help

107

If a tire blows out while you're driving, you can prevent an accident by:

- ☐ signaling for help
- ☐ taking your foot off the gas and holding the wheel steady
- ☐ stopping as quickly as possible
- ☐ driving on to the nearest gas station

107

taking your foot off the gas and holding the wheel steady

108

You should use your parking lights alone when:

- ☐ parked in a parking lot
- ☐ parked on the road facing traffic
- ☐ parked on the road going with the traffic
- ☐ entering a four-lane divided highway

20190

108

parked on the road facing traffic

109

At night the headlights on a car should light up the road for at least:

- ☐ 100 feet
- ☐ 250 feet
- ☐ 300 feet
- ☐ 350 feet

20191

109

350 feet

110

How close to an oncoming vehicle should you be before switching your headlights to low beam?

- ☐ 250 feet
- ☐ 350 feet
- ☐ 500 feet
- ☐ 520 feet

20192

110

500 feet

111

How close should you be to a vehicle you are overtaking before switching your headlights to low beam?

- ☐ 200 feet
- ☐ 300 feet
- ☐ 400 feet
- ☐ 500 feet

20193

111

200 feet

112

At night when you meet a vehicle with very bright, blinding lights, what is the safest action to take?

- ☐ put on your high beams to counteract his
- ☐ close your eyes so that you won't be blinded
- ☐ look toward the right side of the road, stay near it, and slow down
- ☐ turn on your left-turn signal to tell the driver to dim his lights

20194

112

look toward the right side of the road,
stay near it, and slow down

113

If you must drive in a heavy fog, be sure to use:

- ☐ your horn
- ☐ high beam on your headlights
- ☐ low beam on your headlights
- ☐ parking lights only, to save the battery

20195

113

low beam on your headlights

114

What conditions determine the length of time in which you can stop your car?

- ☐ windshields should be clean
- ☐ brakes, road surface and weather
- ☐ driver may get sleepy
- ☐ car must be periodically inspected

20196

114

brakes, road surface and weather

115

How far will it take you to stop if you are traveling at 40 mph?

- ☐ 30 feet
- ☐ 67 feet
- ☐ 120 feet
- ☐ 190 feet

20197

Safety Rules for the Radial Arm Saw

1. Make sure proper blade is installed and that it is sharp.

2. Set up for the type of cut you need to make and ask teacher to check setup.

3. Hold stock firmly, keeping hand well out of the way of the blade.

4. Pull saw smoothly across board. Maintain firm control so that saw does not pull itself into the work.

5. When crosscutting, make sure saw returns to the starting position before advancing board for the next cut.

6. Cut only one piece of stock at a time.

7. When finished, lock saw in starting position and clean up area.

1995

115

120 feet

116

How many feet will it take you to stop your car when driving at 60 mph?

- ☐ 67 feet
- ☐ 120 feet
- ☐ 190 feet
- ☐ 400 feet

20198

116

400 feet

117

How many car lengths should you keep between you and the car in front of you if you are going 40 mph?

- ☐ one
- ☐ two
- ☐ four
- ☐ eight

20199

117

four

118

How far behind the car in front of you should you drive?

- ☐ 1 car length for every 10 mph
- ☐ 1 car length for every 40 mph
- ☐ 2 car lengths for every 10 mph
- ☐ 2 car lengths for every 40 mph

20200

118

1 car length for every 10 mph

119

What should you consider when you are following another car on a highway?

- ☐ do not follow too closely; in other words, do not "tailgate"
- ☐ try to follow at exactly the same speed
- ☐ watch out for littering
- ☐ make sure you don't lose sight of the car

20201

119

do not follow too closely; in other words, do not "tailgate"

120

How closely may you follow a fire engine on its way to a fire?

- ☐ 200 feet in both city and rural areas
- ☐ 500 feet in both city and rural areas
- ☐ 200 feet in the city; 500 feet in rural areas
- ☐ 500 feet in the city; 200 feet in rural areas

20202

120

200 feet in the city; 500 feet in rural areas

121

When you see or hear a vehicle with a flashing red light on, siren blowing or bell ringing, what should you do?

- ☐ give it the right of way
- ☐ speed up and drive on
- ☐ stop in your lane
- ☐ stop and direct traffic, if there is no police officer

20203

121

give it the right of way

122

What is the general rule with regard to right of way at intersections?

- ☐ The car going straight ahead has the right of way.
- ☐ The car on the main road has the right of way.
- ☐ The car on the right has the right of way.
- ☐ The car making a turn has the right of way.

20204

122

The car on the right has the right of way.

123

What does a broken line painted on the highway mean?

- ☐ You must not cross it at any time.
- ☐ You may cross it to pass, provided traffic permits.
- ☐ You may cross it to pass, even on hills.
- ☐ You must not cross it on weekends.

20205

123

You may cross it to pass, provided traffic permits.

124

What does it mean when the painted line on the highway is a double solid line?

- ☐ You may cross it at any time.
- ☐ You may cross it only if you are on the main road.
- ☐ You must never cross it.
- ☐ You may cross it only if traffic permits.

124

You must never cross it.

125

How should you handle your car to prevent an accident when you have a blowout?

- ☐ Blink your lights to warn other drivers.
- ☐ Slam on your brakes to stop.
- ☐ Take your foot off the gas and hold the steering wheel steady.
- ☐ Warn other drivers by blowing your horn.

20207

Safety Rules for the Portable Router

1. Stock should be firmly fastened with a vise or clamp.
2. Change cutters and make adjustments only when cord is disconnected. Do not rely on the switch alone.
3. Make sure cutters are tight in the chuck and that adjustments are locked.
4. Ask your teacher to check your setup.
5. Before plugging in the electric cord, make sure switch is off and that machine is on its side.
6. Hold the machine firmly with both hands.
7. Practice on scrap stock.
8. Feed cutters slowly into the material.
9. When cut is finished, turn off switch, allow machine to stop, and lay it on its side, away from the edge of the bench.
10. Disconnect cord, remove cutter, clean machine, and store it properly.

125

Take your foot off the gas and hold the steering wheel steady.

126

To signal for help on the New York Thruway, you should:

- ☐ blink your lights
- ☐ put a flag over the trunk
- ☐ put a flare behind the car
- ☐ tie a white cloth to the left door handle of your car

20208

126

tie a white cloth to the left door handle of your car

127

When does the law require that you turn on your headlights?

- ☐ one half-hour after sunset
- ☐ one half-hour before sunset
- ☐ one hour after sunset
- ☐ one hour before sunset

20209

127

one half-hour after sunset

128

Parking lights are used alone when you:

- ☐ drive in a well lighted area
- ☐ park on a road going with the traffic
- ☐ park on a road facing traffic
- ☐ stop at a toll booth

20210

128

park on a road facing traffic

129

Taillights on a car must be visible for a distance of:

- ☐ only 50 feet
- ☐ only 300 feet
- ☐ 500 feet
- ☐ 650 feet

20211

129

500 feet

130

What is the distance that should be lighted by your headlights at night?

- ☐ 100 feet
- ☐ 250 feet
- ☐ 350 feet
- ☐ 500 feet

20212

130

350 feet

131

How close should you be to an oncoming vehicle before switching your headlights to low beam?

- ☐ 500 feet
- ☐ 350 feet
- ☐ 200 feet
- ☐ 100 feet

20213

131

500 feet

132

How close should you be to a vehicle you are overtaking before switching to low beams?

- ☐ 100 feet
- ☐ 200 feet
- ☐ 250 feet
- ☐ 500 feet

20214

132

200 feet

133

At night when you meet a vehicle with very bright, blinding lights, what is the safest action to take?

- ☐ Put on your high beams to counteract his.
- ☐ Close your eyes so that you won't be blinded.
- ☐ Look toward the right side of the road, stay near it, and slow down.
- ☐ Turn on your left-turn signal to tell the driver to dim his lights.

133

Look toward the right side of the road, stay near it, and slow down.

134

In a heavy fog, always use your:

- ☐ high beams
- ☐ low beams
- ☐ parking lights

20216

134

low beams

135

You now know some of the important driving rules of New York State.

This will help you to be safe on the road and pass the written test.

You will find them all plus many more in the New York State DRIVER'S MANUAL. Read it.

NO ANSWER NEEDED

THIS IS THE END OF BOOK 24

20217

Safety Rules for Portable Sanders

1. Arrange work so that it is held securely.

2. Inspect sander and abrasive belt, pad, or disc.

3. Be certain switch is off before connecting power cord. Belt sander should be laid on its side.

4. Check tracking of belt sander before starting work.

5. Do not "force" any sander. Use only the weight of the machine.

6. Avoid inhaling dust. Use mechanical dust pickup or wear respirator.

8. Keep abrasive surface clean.

9. When finished, disconnect power cord and clean machine prior to storage. Always empty dust collection bag.

TRY THE FOLLOWING QUESTIONS TO SEE HOW WELL YOU HAVE MASTERED THE MATERIAL IN THIS UNIT. YOUR INSTRUCTOR HAS THE ANSWERS.

1

What conditions determine the length of time in which you can stop your car?

- ☐ windshield should be clean
- ☐ brakes, road surface, and weather
- ☐ driver may get sleepy
- ☐ periodically inspected

2

How many feet will it take you to stop your car when driving at 60 mph?

- ☐ 67 feet
- ☐ 120 feet
- ☐ 190 feet
- ☐ 400 feet

3

At 40 mph, how many car lengths should you allow between your car and the one ahead?

- ☐ four
- ☐ eight
- ☐ twelve
- ☐ sixteen

4

What should you consider when you are following another car on a superhighway?

- ☐ do not follow too closely; in other words, do not "tailgate"
- ☐ try to follow at the same speeds
- ☐ watch out for littering
- ☐ make sure you do not lose sight of it

5

What is the general rule with regard to right of way at intersections?

- ☐ the car going straight ahead has the right of way
- ☐ the car on the main road has the right of way
- ☐ the car on the right has the right of way
- ☐ the car making a turn has the right of way

6

What does a broken line painted on the highway mean?

- ☐ you must not cross it at any time
- ☐ you may cross it to pass, provided traffic permits
- ☐ you may cross it to pass, even on hills
- ☐ you must not cross it on weekends

Smith and Wesson TDS Computer (Time--Distance--Speed). Operating Instructions and Trial Guide.

Stephenson, Red Bank, N.J. Smith and Wesson Law Enforcement Group.
MF AVAILABLE IN VT-ERIC SET.

PUB DATE - ND 76p.

DESCRIPTORS - *ELECTRONIC EQUIPMENT; *LAW ENFORCEMENT; *MANUALS; *JOB TRAINING; *TRAFFIC CONTROL; TRAFFIC REGULATIONS; INSTRUCTIONAL MATERIALS; COMPUTERS; MOTOR VEHICLES; POLICE

ABSTRACT - Intended for the law enforcement officer involved in traffic control, this training manual describes the theory and operation of the Time-Distance-Speed (TDS) Computer used to calculate the speed of motor vehicles. Operating procedures are detailed, including methods of clocking speeders from various moving and parked positions. Initial calibration and subsequent checks are explained. A trial guide is included to prepare the TDS operator for cross-examination in court. (BH)

Safety Rules for the Scroll (Jig) Saw

1. Do not attempt to saw stock that does not have a flat surface. Other shapes may be sawn if a suitable support or rest is fashioned.
2. Check for proper blade size and type.
3. Check for correct blade tension.
4. Adjust hold-down so that spring fingers bear on work.
5. Set correct machine speed.
6. Adjust dust blower, if so equipped.
7. Holding material firmly, feed into machine at a moderate rate.
8. Keep hands and fingers away from the blade.
9. If blade breaks, turn off machine and summon your teacher.
10. Stop machine before brushing scrap pieces from work table.
11. When finished, stop machine and clean up the area.

CHAPTER I

INTRODUCTION TO THE TDS COMPUTER

1. The Traffic Problem

The objective of traffic management is to move the greatest number of vehicles as rapidly as possible and hold accidents to an irreducible minimum. In conventional traffic management, these objectives have been strived for by four separate approaches: enforcement, engineering, education and enactment. This approach is commonly referred to as the "4 E Concept." Those in enforcement compose the group which has most direct contact with the traffic problem. The remaining groups use the findings of enforcement to guide their actions. The engineer determines from accident reports that a particular location has an unusually high number of accidents. Attempts are then made to change the physical environment of that location to reduce the decisions that the driver must make. The educator, using these findings, attempts to educate the public in the new methods and techniques as they are developed. The legislators also use these findings to guide them in enacting laws, the enforcement of which will presumably reduce accidents. Utilizing this approach, there appears to be no problem; however, over the years the traffic accident picture has constantly deteriorated. All of the agencies involved in the 4 E concept have consistently increased their efforts; yet they have been unsuccessful in reducing the number of accidents, deaths and injuries that occur on our highways. It has long been assumed that there is no magical solution.

In fact, a great deal of effort has gone into the solution of the problem, only to find a consistent and predictable rise in traffic accidents. In an attempt to maintain control of the situation, a constant search for better methods, techniques and equipment must be perpetuated.

2. The Role of Speed in Traffic Accidents

It is recognized that speed on streets and highways is one of the major contributors to traffic accidents; consequently, speed must be one of the problems on which a great deal of effort should be expended. This could be accomplished by saturating the streets and highways with traffic enforcement officers. However, the American people would consider enforcement to this degree far too costly and, at the same time, a far too agressive act. Therefore, methods and equipment must be developed that will make each officer more effective and efficient and, in turn, greatly increase his influence on the public.

3. The TDS Computer

The TDS Computer is an electronic time-distance speed measuring device used in conjunction with an enforcement car to determine the vehicle speed of potential traffic violators. It computes average speed by recording the distance traveled by a violating vehicle and also recording the elapsed time of the violating vehicle over that distance.

With the TDS Computer, a properly trained operator while driving his patrol car can determine the speed of any other vehicle on the same highway or street. The violating vehicle may

be traveling in the same or opposite direction and can be either in front of, behind, or passing the operator's patrol car.

The TDS Computer can also be used to check vehicle speed from a parked patrol car in many configurations. This combined capability tends to increase the enforcement officer's effectiveness many times over. Based on these principles, it may safely be assumed that properly trained enforcement officers, equipped with a TDS Computer, can significantly reduce the frequency of speeding violations. By taking enforcement action against the violator at any location on a roadway and changing locations frequently, he can produce the psychological effect of saturating the roads with enforcement. Therefore, the officer equipped with the TDS Computer reduces both the probability of speeding and the possibility of traffic accidents occurring.

The TDS Computer consists of a readout unit, the main computer and switching panel, and the distance pickup. The distance pickup is located at the transmission end of the speedometer cable. The readout unit can be placed in any convenient location, usually on the dashboard. Both connect by cable to the rear panel on the main computer. In the configuration shown, (See Figure I.1), the main computer is pedestal mounted on the center hump between the front seat and dashboard. However, if desired, the switching panel can be removed from the main computer and remotely located, allowing the main computer to be placed under the seat or on the floorboard.

CHAPTER II

PRINCIPLES OF THE TDS COMPUTER

1. Formula for Speed

The basic principle on which the TDS Computer functions is an age-old mathematical formula. This function is the formula* for speed; Speed = $\frac{\text{Distance}}{\text{Time}}$. In other words, speed can be determined by dividing elapsed time (T) into the distance traveled (D). If elapsed time (T) is stated in hours or portions thereof and is divided into distance (D) stated in miles, the results would be in Miles Per Hour (S). This function is demonstrated in the following examples:

a. If a car travels 80 miles in 2 hours, the resultant average speed would be 40 MPH (80 miles ÷ 2 hours = 40 MPH)

b. If a car travels 30 miles in 1/2 hour (0.5 hours), the resultant average speed would be 60 MPH (30 miles ÷ 0.5 hours = 60 MPH)

As the distance traveled and elapsed time shorten, the time may be measured in minutes. If this is done, the first function must be a conversion from minutes to hours. A simple method for this conversion is to divide the elapsed time by 60 (the number of minutes in an hour). After this is done, simply apply this in the manner given earlier. These combined functions

---

* Actually, from a scientific standpoint, this formula is the basic definition of speed.

20233

are demonstrated in the following examples:

a. If a car travels 2 miles in 3 minutes, the resultant average speed would be 40 MPH (3 minutes ÷ 60 = 0.05 hours). Now, continue the function as given in the other example. (2 miles ÷ 0.05 hours = 40 MPH)

b. If a car travels 1 mile in 1.2 minutes (1 minute, 12 seconds), the resultant average speed would be 50 MPH (1.2 minutes ÷ 60 = 0.02 hours), continuing (1 mile ÷ 0.02 hours = 50 MPH).

As the time and distance continue to shorten, the time may more conveniently be measured in seconds. The conversion of seconds to hours is done in the same manner that minutes are converted to hours except for a factor of 3600 instead of 60. This is demonstrated in the following example:

a. If a car travels 1/4 mile (0.25 miles) in 18 seconds, the resultant average speed would be 50 MPH (18 seconds ÷ 3600 = 0.005 hours), continuing (0.25 miles ÷ 0.005 hours = 50 MPH).

2. The XY Graph

A quick and simple method to calculate speed when the elapsed time and traveled distance are known is by plotting these factors on an XY graph. Let X = Distance and Y = Time, as shown in Figure II.1.

If X = Distance in Miles and Y = Time in Minutes, and the graph is calibrated in equal one-mile and one-minute increments,

20234

Figure II.1

20235

then 60 MPH will represent 1/2 of the graph (one mile in one minute, two miles in two minutes, etc.). 30 MPH would represent 1/4 of the total graph and 120 MPH would represent 3/4 of the total graph.

3. Time Measurement by the TDS Computer

The TDS Computer determines elapsed time by using an electronic crystal made of quartz. This type crystal, similar to those used in radios, radar, etc., will function at a precise frequency depending upon its thickness. The frequency is given in cycles per second.

The crystal used in the TDS Computer has a natural frequency of one megacycle or 1,000,000 cycles per second with a tolerance of ± .05%. The cycles per second are then divided by 100,000 (1,000,000 ÷ 100,000 = 10), so that 10 counts per second of elapsed time is put into the computer when the "Time" switch is in the "On" position.

4. Distance Measurement by the TDS Computer

The distance measurement is made by a specially designed attachment placed at the odometer cable outlet on the transmission of the vehicle. This device, a photo-electric pick-up, counts the revolutions of the transmission and allows approximately 4000 impulses to be entered into the computer per mile traveled when the "Distance" switch is in the "On" position. The number of impulses allowed by the distance pick-up head is adjustable to permit absolute calibration of the system. (The 4000 pulses are divided by 4 within the computer so that precisely 1000 pulses per mile are entered into the distance storage register.)

20236

Safety Rules for the Woodworking Shaper

1. Do not attempt to use the shaper on stock having knots, cracks, or other defects.

2. Do not attempt to shape small pieces without special holding jigs. Consider the use of the router. Check with your teacher.

3. Make sure that knives are correctly seated and that the locknut is tightened securely.

4. Arrange to use the fence whenever possible.

5. Use a fixed collar whenever possible.

6. Use spring guard whenever possible.

7. Use push stick if needed.

8. Practice feeding with power off. Enter all work opposite to the direction of the rotation of the cutter.

9. Have your teacher check your setup and supervise your first cuts.

10. Test setup on scrap stock of safe size.

11. Turn off power, remove cutters and clean up the area.

1999

5. Time and Distance Data Storage

The TDS Computer has separate storage banks for time and distance data. Both information storage banks are conventional binary counter systems that receive, count and store the conditioned signals coming from the time and distance measuring devices. The time storage bank is capable of storing 54 minutes of elapsed time, and the distance storage bank is capable of storing 32 miles of distance. A maximum of 999.9 seconds can be displayed (16.6 minutes) a maximum of 9.999 miles can be displayed.

6. Computing the Speed

When the "Time" and "Distance" switches are returned to the "Off" position and the selector switch is set on "MPH", the computer receives a "Ready to Compute" signal. Upon receipt of this signal, the Time and Distance Data Storage Banks transfer the data into separate Shift Registers on a non-destruct basis. In other words, the stored data is utilized but will be retained by both Data Storage Banks.

The actual computation, $S = \frac{D}{T}$ (division of elapsed time into traveled distance), is done by "Repetitive Subtraction" on a bit-by-bit basis. The number of subtractions that take place are counted and displayed on the digital readout as "MPH". When it becomes necessary to borrow to complete a subtraction, the computation is complete.

After the miles per hour are computed, distance traveled

20237

and the elapsed time can be displayed on the digital read-out simply by changing the selector from "MPH" to "Time" and "Distance". The time and distance data will remain in the Data Storage Banks until the "Erase" switch is pushed.

20238

CHAPTER III

OPERATIONAL PROCEDURES OF THE TDS COMPUTER

1. CONTROL SWITCHES

The following named and described control switches are located as shown in the front panel photograph of Figure III.1.

POWER SWITCH (ON-OFF). Controls power input to the device from the patrol car's 12-volt electrical power system.

DISTANCE SWITCH (ON-OFF). Allows the distance traveled by the patrol car while the switch is on to be accurately measured and entered into the distance storage register. The distance measurement is independent of the patrol car's speed.

DISTANCE LOCK SWITCH (NORMAL-LOCK). In the lock position it locks whatever distance measurement is in the distance storage register by disabling the distance switch and distance storage reset circuits.

TIME SWITCH (ON-OFF). Allows counts from an accurate crystal oscillator time base to enter the time storage register while the switch is on.

READOUT SWITCH (MPH, TIME, DISTANCE). In the time position the time stored in the time storage register is displayed on the readout. In the distance position the distance stored in

20239

Figure III.1

20240

the distance storage register is displayed on the readout. In the MPH position the miles per hour corresponding to the stored time and distance is computed and displayed on the readout.

ERASE SWITCH (PUSH BUTTON). Pushing the erase switch clears the time and distance storage registers in preparation for a new set of readings.

NIXIE* TURN-OFF SWITCH (PUSH BUTTON). Pushing this switch will completely turn off the NIXIE readouts. They will automatically re-light when a readout is required. (This switch is located on the readout unit.)

2. Operating Modes

In the normal mode of operation the erase switch will prepare the device to accept a new set of time and distance readings. (The time and distance switches are in the OFF position when the erase button is pushed.) The NIXIE turn-off switch may be pushed at this time. The position of the readout switch is immaterial, however, MPH will be the usual position since this is the first desired reading. Time and distance measurements are taken by respectively turning the time and distance switches ON then OFF. This may be done in any sequence. When both time and distance have been entered into their respective storage registers

---

* A registered trademark of the Burroughs Corp.

20241

a readout will automatically appear corresponding to the position of the readout switch (usually MPH). The readout switch may then be set to the other positions with a corresponding readout of those quantities. Since the time and distance storage register are non-destructive the readout switch can at will be switched to any position resulting in a re-calculation and readout of that quantity until such time as the erase button is pushed.

If the distance lock switch is placed in the lock position when a distance measurement is stored in the distance register, this distance measurement will be locked and will not be affected by the erase button. The device will operate essentially as described above with only the time position being sequenced.

3. The Functional Requirements of a TDS Computer Operator

The TDS Computer is a tool of the officer--alone it does absolutely nothing. When manipulated by an officer, its limits are a reflection of the officer's ability as an operator.

In order to become an expert TDS Computer operator, the officer must possess three qualities: the first is concentration; the second, the ability to anticipate; and the third, ingenuity. There are four functions that the officer must perform with expertise.

- He must be expert in starting and in stopping the time switch when the violating vehicle reaches a

20242

reference point on the roadway in front of the operator.

- He must be expert in starting and in stopping the time switch when a violating vehicle, which is approaching from the rear, reaches a reference point on the roadway. He must utilize the rear view mirror for this type of clock.
- He must be expert in simultaneously starting the time switch and stopping the distance switch, or vice versa, when the violating vehicle is directly abreast of the enforcement vehicle.
- He must be expert in starting and stopping the distance switch when the enforcement vehicle reaches a reference point on the roadway.

Before the operator masters the above functions, the following terms and definitions must be thoroughly understood:

- <u>Reference points</u>

  Reference point defined: a reference point is anything on the roadway that is foreign to the surface of the road. Reference points are created by a change in light density.
- <u>Reference points during daylight hours</u>

  There are two types of reference points created by daylight. One is the moving shadow of the violator's vehicle. Depending on the direction of the sun, the shadow may be cast on either side of the vehicle;

20243

Figure III.2

For purposes of this discussion, the line that is created at a right angle to the vehicle's head-lamps will be called a <u>light trail</u>. When the light trail passes a mail box, a reflective road sign, the beginning or ending of a guard rail or bridge, or any other large object on the roadway, the object goes black. This change of light density can be easily seen from a great distance and the operator can be sure that the front of the violator's vehicle is at a right angle to the object observed. Note, however, that the lights from the operator's vehicle will obstruct the light density change if the operator's vehicle is following closely behind the violator's vehicle. When the operator follows closely behind the violating vehicle, he can easily observe the light trail as it moves forward on the road shoulder.

20245

He may use as a reference point, in this case, anything that is foreign to the road shoulder. Examples of these reference points are: the post used for road signs or mail boxes, bottles, cans, any debris, the beginning or ending of driveways, roads or bridges, and any other object that can be seen as the light trail touches it and which remains visible for the duration of the clock.

- Precision in the use of reference points

  A qualified operator is able to start or stop the distance or time switch when the violator's vehicle or the enforcement vehicle is within four (4) feet of a reference point. The operator employs anticipation in the use of reference points. Anticipation involves the action taken when an expected event occurs. The effect of anticipation can easily be seen, as it is in fact a countdown. The operator observes the shadow cast by the violating vehicle traveling along the roadway, selects a reference point in front of the violating vehicle, and then observes and anticipates the moving shadow as it proceeds to and touches the reference point, at which time the switch is turned on.

- The role of reaction time and depth perception in the use of reference points

Safety Rules for the Grinder

1. Check the condition of the grinding wheels. They should be free of chips and cracks.

2. Make sure tool rest is not over 1/8" away from wheel. Adjust clearance and angle if necessary.

3. Check guards and wipe off safety glass. Check spark arrester position.

4. Stand to one side of the wheels when you turn on the power.

5. Hold work with your hands. Do not use gloves. Do not use pliers. Check with your teacher for instructions on grinding small work.

6. Use the face of the wheel only.

7. Keep work in motion across the face of the wheel. Use only enough pressure to cause the wheel to cut.

8. Do not allow work to overheat. Quench frequently.

9. Allow the wheels to stop before leaving the grinder.

1002
2000

Reaction time is not involved. Reaction time is that amount of time elapsed between the perception of an unexpected event and action taken. By using anticipation to an expected event, this element is reduced to the point of insignificance. Neither is depth perception involved, because the shadow cast by a violating vehicle actually touches the reference point on the roadway. Depth perception involves the lining up of two objects in a spatial relationship and thus is not used.

4. TDS Computer Clocking Configurations

There are five basic configurations in which a violating vehicle may be clocked. They are:

- The enforcement vehicle clocks a violating vehicle from a parked position.
- The enforcement vehicle clocks a violating vehicle which is approaching from the rear.
- The enforcement vehicle, which is approaching an intersection, clocks a violating vehicle which is crossing its path.
- The enforcement vehicle clocks a violating vehicle while following it in the same direction.
- The enforcement vehicle clocks a violating vehicle which is approaching in an opposing lane.

5. Methods for Clocking Violating Vehicles

There are many variations of each configuration; thus

20247

the number of ways a vehicle may be clocked is dependent upon the ingenuity of the operator. The following is an explanation of each configuration. Several variations of each will be given:

- <u>The enforcement vehicle clocks a violating vehicle from a parked position</u>.

  (A) The enforcement vehicle parks and clocks passing violators. The operator selects two reference points on the roadway that he can see clearly from a selected location off the roadway. The operator then measures the distance between the two reference points. By turning the distance lock toggle switch on, the distance is locked into the computer. The time switch is turned on when the violating vehicle reaches the first reference point. The time switch is turned off when the violating vehicle reaches the second reference point. Since the distance has been locked into the computer, the computer can be reset and still retain the distance for additional clocks between the same two points.

  PROCEDURE: (See Figure III.3)

  (1) The TDS operator locates two reference points, then puts the distance in the computer, locks the distance into the computer and locates the enforcement vehicle off the roadway such that both reference points are clearly visable.

20248

(2) The time switch is turned on when a violating vehicle reaches the first reference point.

(3) The time switch is turned off when the violating vehicle reaches a second reference point.

*Note: In using this method the computer is cleared, after each clock, of the time only. The distance between the two reference points is locked into the computer. When the reference points extend across the roadway, traffic may be clocked in either direction.

Figure III.3

20249

(B) The enforcement vehicle parks, using itself as the second reference point. The operator turns on the distance switch and travels for some distance. He then parks alongside the road and turns the distance switch off and locks distance into the computer. The time switch is turned on when a violating vehicle reaches the reference point. The time switch is turned off when the violating vehicle is abreast of the enforcement vehicle. The computer may be reset and used continuously, utilizing the same reference points.

PROCEDURE: (See Figure III.4)

(1) The TDS operator locates a reference point and turns on the distance switch.

(2) The TDS operator proceeds to a point one-tenth of a mile away or more. He then parks the enforcement vehicle such that the first reference point is clearly visible and locks the distance into the computer.

(3) The time switch is turned on when a violating vehicle reaches the first reference point.

(4) The time switch is turned off when the violating vehicle reaches a point directly abreast of the enforcement vehicle.

20250

*Note: Traffic can be clocked in either direction when the first reference point extends across the roadway.

(C) The TDS operator uses one reference point on the roadway, parks the enforcement vehicle and uses the vehicle as the second reference point in clocking one violating vehicle. The enforcement vehicle is being followed by a violating vehicle. The distance switch is turned on when the enforcement vehicle reaches a reference point. The time switch is turned on when the violating vehicle reaches the same reference point. The enforcement vehicle then pulls off the road and turns off the distance switch. The time switch is turned off when the violating vehicle is abreast of the enforcement vehicle.

PROCEDURE: (See Figure III.4)

(1) The distance switch is turned on when the enforcement vehicle reaches the first reference point.

(2) The time switch is turned on when the violating vehicle reaches the same reference point.

(3) The enforcement vehicle then pulls off the road and parks.

20251

(4) Both the time and distance switches are turned off when the violating vehicle is abreast of the enforcement vehicle.

Figure III.4

20252

(D) The TDS operator uses triangulation in locating reference points. He then measures the distance between the reference points and locks it into the computer. The enforcement vehicle parks and measures the time consumed by the violating vehicle between the same two points.

PROCEDURE: (See Figure III.5)

(1) The TDS operator locates a natural triangular situation or creates his own. He may paint his marks on the road and use them for measuring distance. (Note: This situation, once created, may be used from day to day.)

(2) The time switch is turned on when a violating vehicle reaches the first reference point.

(3) The time switch is turned off when the violating vehicle reaches the second reference point.

*Note: The use of this reference point situation is the same in theory as sighting down the sights of a rifle. The many uses of this situation are limited only to the ingenuity of the operator.

20253

Figure III.5

- <u>The enforcement vehicle clocks the violating vehicle which is approaching from the rear</u>.

  (A) In this clock, the distance switch is used first. Utilizing the rear view mirror, the operator observes a violating vehicle approaching at a high rate of speed. The distance switch is turned on when the enforcement vehicle reaches a reference point. The time switch is turned on when the violating vehicle reaches the same reference point. The distance switch is turned off when the enforcement vehicle reaches the second reference point. The time switch is turned off when the violating vehicle reaches the second reference point.

PROCEDURE: (See Figure III.6)

(1) The TDS operator locates a first reference point and turns on the distance switch.

(2) The time switch is turned on when the violating vehicle reaches the first reference point.

(3) The TDS operator locates a second reference point and turns off the distance switch.

(4) The time switch is turned off when the violating vehicle reaches the second reference point.

Figure III.6

20255

(B) The enforcement vehicle clocks a violating vehicle approaching from the rear, using one reference point on the roadway and using as the second reference point where the violating vehicle passes abreast of the enforcement vehicle.

PROCEDURE: (See Figure III.7)

(1) The TDS operator locates the first reference point and turns on the distance switch.

(2) The time switch is turned on when the violating vehicle reaches the first reference point.

(3) Both the time and distance switches are turned off when the violating vehicle gets abreast of the enforcement vehicle.

Figure III.7

20256

Safety Rules for Portable Electric Drills

1. Select the proper size drill bit and drill motor. Make sure the bit is sharp.

2. Before plugging in the power cord, insert the drill in the chuck and tighten the chuck securely with the key. Remove the key.

3. Making sure the ground connection is in place, plug in the power cord.

4. Secure the work with clamps or in a vise.

5. Keep hands away from chuck and drill.

6. Hold drill firmly and turn on. Both hands are usually needed on the drill.

7. Apply straight and steady pressure.

8. Ease up on the pressure before the drill breaks through.

9. Remove drill from hole. Do not touch the drill bit--it may be very hot.

10. Remove the bit and return everything to the proper place after cleaning up.

2001
0008

- <u>The enforcement vehicle, which is approaching an intersection, clocks the violating vehicle which is crossing its path</u>.

  This method may be used when the enforcement vehicle pulls up to an intersection and the operator sees a violator going past, but he is unable to pull out into traffic and obtain a clock. The time switch is turned on when the violating vehicle reaches a reference point past the intersection. The time switch is turned off when the violating vehicle reaches a second reference point. Thus, time has been recorded in the computer. The TDS operator pulls out of the intersection and measures distance while in pursuit.

  PROCEDURE: (See Figure III.8)

  (1) The time switch is turned on and the enforcement vehicle starts the time measure when the violating vehicle reaches a reference point at the end of the intersection or a point past the intersection.

  (2) The time switch is turned off when the violating vehicle reaches a second reference point.

  (3) The enforcement vehicle pulls out and turns on the distance switch at the first reference point, while in pursuit.

20257

(4) The enforcement vehicle reaches the second reference point and turns off the distance switch.

Figure III.8

20258

- <u>The enforcement vehicle follows the violating vehicle in the same direction</u>.

(A) The TDS Computer may be used in regular pacing just as the regular speedometer method. In this method, the time and distance switches are turned on simultaneously and turned off simultaneously. No reference points are used. The distance between the violating vehicle and the enforcement vehicle at the beginning of the clock and at the finish of the clock must be approximately the same. The TDS Computer gives the average speed of the enforcement vehicle. Since the distance between the two vehicles was the same at the beginning and end of the clock, the two vehicles were traveling at the same average rate of speed.

PROCEDURE: (See Figure III.9)

(1) The enforcement vehicle gets in a relative position behind the violating vehicle and turns on the distance and time switches simultaneously.

(2) The enforcement vehicle obtains the same relative position behind the violating vehicle after one-tenth of a mile or more and turns off the time and distance switches

simultaneously, thus computing the average speed of both vehicles.

Figure III.9

20260

(B) The enforcement vehicle follows the violating vehicle, using two reference points. The time switch is turned on when the violating vehicle reaches the first reference point. The distance switch is turned on when the enforcement vehicle reaches the same reference point. The time switch is turned off when the violating vehicle reaches the second reference point. The distance switch is turned off when the enforcement vehicle reaches the second reference point. It might be noted that the distance between the two vehicles need not be maintained. The speed of the two vehicles need not be the same. It is necessary to be consistent when using the front or rear of the violating vehicle as it crosses the reference points. The same holds true for the enforcement vehicle.

PROCEDURE: (See Figure III.10)

(1) The time switch is turned on when the violating vehicle reaches the first reference point.

(2) The distance switch is turned on when the enforcement vehicle reaches the first reference point.

(3) The time switch is turned off when the

20261

violating vehicle reaches the second reference point.

(4) The distance switch is turned off when the enforcement vehicle reaches the second reference point.

Figure III.10

20262

(C) This method is identical with number B above except that the time is measured completely before the distance is measured. In all cases, the time is determined by the violating vehicle and the distance is measured by the enforcement vehicle.

PROCEDURE: (See Figure III.11)

(1) The time switch is turned on when the violating vehicle reaches the first reference point.

(2) The time switch is turned off when the violating vehicle reaches the second reference point.

(3) While in pursuit, the distant switch is turned on when the enforcement vehicle reaches the first reference point.

(4) While in pursuit, the distance switch is turned off when the enforcement vehicle reaches the second reference point.

20263

Figure III.11

- <u>The enforcement vehicle clocks a violating vehicle which is approaching in an opposing lane</u>.

  (A) The enforcement vehicle begins the time measure first and uses itself as the second reference point. The TDS operator sees an approaching vehicle and turns on the time switch when the violating vehicle reaches a reference point. The violating vehicle and the enforcement vehicle continue toward each other and, as they are abreast, the time switch is turned off and the distance switch is turned on simultaneously. The enforcement vehicle continues to the first

 20264

reference point, where he turns off the distance switch.

PROCEDURE: (See Figure III.12)

(1) The time switch is turned on when the violating vehicle reaches the first reference point.

(2) The time switch is turned off and the distance switch is turned on when the violating vehicle and the enforcement vehicle are abreast of each other.

(3) The enforcement vehicle proceeds to the first reference point and turns the distance switch off. He then turns around in pursuit.

Figure III.12

20265

(B) The enforcement vehicle begins measuring distance first and uses itself as the second reference point. The enforcement vehicle reaches a reference point and the distance switch is turned on. The two vehicles meet and the distance switch is turned off and simultaneously the time switch is turned on. The violating vehicle continues to the first reference point, at which time the TDS operator turns off the time switch.

PROCEDURE: (See Figure III.13)

(1) The distance switch is turned on when the enforcement vehicle reaches a reference point.

(2) When the enforcement vehicle and the violating vehicle are abreast of each other, the distance switch is turned off and the time switch is turned on simultaneously.

(3) The enforcement vehicle turns around in pursuit and turns the time switch off when the violating vehicle reaches the first reference point.

20266

Safety Rules for the Bar Folder and Box and Pan Brake

1. Remove sharp burrs and edges from sheet metal before attempting to handle it in machines.

2. Do not attempt to bend metal which is heavier than the capacity of the machine.

3. Check machine and adjust it as necessary. Ask your teacher to check your setup.

4. Keep hands clear of moving parts.

5. Do not bend more than one thickness of metal.

6. Do not slam or drop handles.

7. Make sure moving parts do not strike anyone.

2003

Figure III.13

(C) The enforcement vehicle measures the time completely; then the distance is measured. The time switch is turned on when the violating vehicle reaches a reference point on the roadway. The time switch is turned off at a second reference point. The distance switch is turned on when the enforcement vehicle reaches the second reference point. The distance switch is turned off when the first reference point is reached.

PROCEDURE: (See Figure III.14)

(1) The time switch is turned on when the violating vehicle reaches the first reference point.

20287

(2) The time switch is turned off when the violating vehicle reaches the second reference point.

(3) The distance switch is turned on when the enforcement vehicle reaches the second reference point.

(4) The distance switch is turned off when the enforcement vehicle reaches the first reference point. The TDS operator then turns the enforcement vehicle and pursues the violating vehicle.

Figure III.14

20268

(D) The enforcement vehicle measures the distance completely and then measures the time. This method is the reverse of method C.

PROCEDURE: (See Figure III.15)

(1) The distance switch is turned on when the enforcement vehicle reaches the first reference point.

(2) The distance switch is turned off when the enforcement vehicle reaches the second reference point.

(3) The time switch is turned on when the violating vehicle reaches the second reference point.

(4) The time switch is turned off when the violating vehicle reaches the first reference point.

20269

Figure III.15

(E) The enforcement vehicle begins measuring the time, then turns around and completes the clock. Thus, the time switch is turned on when the violating vehicle reaches a reference point. The two vehicles meet and the enforcement vehicle continues until it is past the first reference point; it then makes a "U" turn and proceeds in the same direction as the violating vehicle. The distance switch is turned on when the enforcement vehicle reaches the reference point. The time switch is turned off as the violating vehicle reaches the second reference point. The distance switch is turned off at the second reference point.

PROCEDURE: (Figure III.16)

(1) The time switch is turned on when the violating vehicle reaches the first reference point.

(2) The enforcement vehicle turns around and pursues the violating vehicle. The TDS operator turns on the distance switch when his enforcement vehicle reaches the first reference point.

(3) The time switch is turned off when the violating vehicle reaches the second reference point.

(4) The distance switch is turned off when the enforcement vehicle reaches the second reference point.

Figure III.16

6. Calibrating the TDS

The TDS has provision for allowing the correct entry of distance into the Distance Storage Register despite:

1. Differences in tire and wheel sizes of various automobiles.
2. Changes in tire pressure, wear, load, or any other factor that could cause a change in the wheel diameter of an automobile.

The calibration of the TDS is accomplished with the aid of six slide switches located on the left hand side of the main computer, near the front panel and beneath the small plate provided for covering the switches. The cover is held on by two screws, one of which can be removed and the plate swung aside for easy access to the calibration switches.

In order to more clearly understand the calibration procedure, the following discussion is offered as an aid. The discussion will be based on the measurement of one exact mile.

When all switches are pushed rearward toward the rear of the TDS (the "ON" position) the lowest possible reading for one measured mile will result.

When all switches are pushed forward toward the front of the TDS (the "OFF" position) the highest possible reading for one measured mile will result.

EXAMPLES: With all switches forward ("OFF") one mile may read 1,200 miles on the TDS.

With all switches rearward ("ON") one mile may read .640 miles on the TDS.

20272

The idea is to get a combination of switch positions, that will accurately indicate one exact mile on the TDS display, for one exact mile measured. However, each switch affects the reading by a different amount.

The switches are numbered 1 through 6 from bottom to top. The top switch, #6, affects the reading by twice the amount of the second switch from the top, #5, and #5 affects the reading by twice as much as #4 and so on.

EXAMPLES: A one mile reading with all switches "ON" may be .640 miles on the TDS.
